

## General Survey System (GSS):

# A Mobile Technologies System for Collecting and Managing Study Data

Data Capture Technology Forum  
March 18, 2010  
Donna Medeiros  
Research Computing Division  
RTI International

# Today's Presentation

- GSS Overview
- Technologies
- Point of Purchase Study (Vietnam)
- Lessons Learned and Next Steps

# GSS Software Development Features

PC based development software (IDE):

- Questionnaire programming ('Designer')
- Language support
- System configuration and setup – at data collection site(s)
- Data File construction for use in Analysis

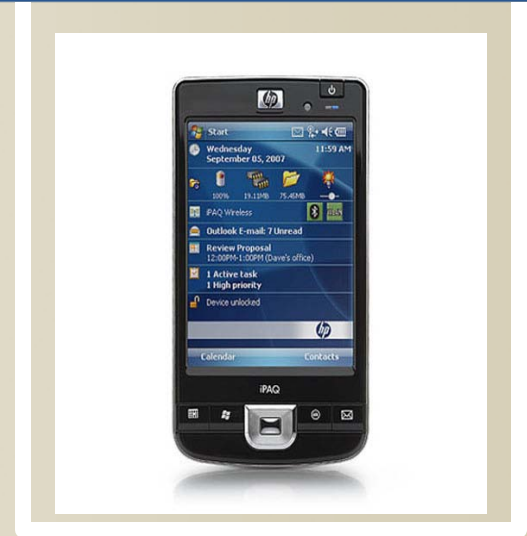

# Handheld Equipment

- **HP iPAQ**—handheld computer, windows Mobile, SQL CE

- **SD card**—inserted into the iPAQ, stores data externally

- **GPS Receiver**—inserts into the iPAQ and used during enumeration

# GSS Use

## Highly Mobile Data Capture system

- Household doorway screening and interviewing
- Vendor listing and vendor surveys
- Intercept surveys
- Hospitals surveys
- Inventories

WHO, Bangladesh

# Survey System Implementation Steps

1. Questionnaire Design and Programming
2. Data Management (Transfer and Aggregation)
3. Data Processing

# Survey: Vietnam Point of Purchase (VPOP)

- Purpose: Collect point of purchase sales baseline data for countries that have signed the WHO Framework Convention on Tobacco Control. Pilot in Vietnam.
- Collaboration between RTI, JHU School of Global Public Health, Hanoi Medical University, Vietnam General Statistical Office
- Key info/Research questions:
  - **Density of Sales, pricing, where and how much is being sold, industry presence, advertising**

# VPOP Technology Advancements

## Relied on Technology:

### GPS

- Field staff area 'locator' during counting and listing
- Recorded vendor location

### Enumeration and Selection

- Counting and listing of Vendors
- Dynamic selection for purchases

Hanoi Medical  
University

# GPS

- System outputs Coordinates such as 21 02.69' N 105 48.36' E
- For use in maps and analysis

[+21° 2' 41.40", +105° 48' 21.60"](https://maps.google.com)  
[maps.google.com](https://maps.google.com)

# Lessons Learned

- Hardware choice is effective for this kind of survey
  - Good battery life
  - Works well in mobile environments
  - Well received by interviewing staff
- Visual Development Environment needed: Developers Software components was updated to IDE
- Software system is robust and can be taught to interviewers in a few days training
- Data File generation important for reporting and analysis Imports directly into SAS, SPSS, MS Access, etc

# Next Steps

- Look to emerging platforms
  - Smart phones
    - Google Android
    - Apple
  - Cell based data transmission
  - Port to tablet based net books
- More Data Management and processing capability
  - Validations and QC reporting
  - Monitoring reports
  - Documentation
