Wednesday, March 26, 2003

## METROPOLITAN AREA EMPLOYMENT AND UNEMPLOYMENT: JANUARY 2003

In January, 164 metropolitan areas recorded lower unemployment rates than a year earlier, 139 areas had higher rates, and 28 areas had rates that were unchanged, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Thirteen metropolitan areas reported jobless rates of at least 10.0 percent, nine of which were located in California and three of which were along the Mexican border in other states. Six areas posted rates below 3.0 percent, with five of these in the South. The national unemployment rate was 6.5 percent in January, not seasonally adjusted.

### Metropolitan Area Unemployment (Not Seasonally Adjusted)

Seventy-one metropolitan areas reported unemployment rates of at least 7.0 percent in January, down from 81 a year ago, while 42 areas had rates below 4.0 percent, almost the same number of areas as in January 2002. The five highest jobless rates were again recorded in California areas—Visalia-Tulare-Porterville, 17.7 percent, Merced, 17.4 percent, Fresno and Salinas, 16.7 percent each, and Yuba City, 15.8 percent. Bryan-College Station, Texas, and Columbia, Mo., continued to register the lowest rates, 2.1 percent each. (See table 1 and the map.)

In January, Shreveport-Bossier City, La., and Danville, Va., reported the largest over-the-year unemployment rate decreases (-3.4 and -3.3 percentage points, respectively). The next largest declines were recorded in Elkhart-Goshen, Ind. (-2.6 percentage points), and Yakima, Wash. (-2.2 points). Another 26 areas registered jobless rate decreases of a full percentage point or more, with 13 of these located in the South and 10 in the West. An additional 47 areas posted decreases from last January of at least one-half percentage point. Tulsa, Okla., recorded the largest over-the-year unemployment rate increase (+1.7 percentage points), followed closely by Florence, S.C. (+1.6 points). Seven additional areas reported increases of at least 1.0 percentage point, and 36 other areas had increases of 0.5 point or more.

Of the 51 metropolitan areas with a 1990 census population of 1 million or more, San Jose, Calif., recorded the highest unemployment rate in January, 8.6 percent. The next highest rates were registered in New York, N.Y., 8.3 percent, and Portland-Vancouver, Ore.-Wash., 8.1 percent. Among these large areas, Washington, D.C.-Md.-Va.-W.Va., continued to post the lowest unemployment rate, 3.5 percent, followed by Orange County, Calif., 4.0 percent. Over the year, jobless rates were down in 24 of these areas, up in 24 areas, and unchanged in 3 areas. The largest over-the-year unemployment rate decreases were reported in Charlotte-Gastonia-Rock Hill, N.C.-S.C., Miami, Fla., Orlando, Fla., and Portland-Vancouver, Ore.-Wash. (-0.9 percentage point each), followed by two other areas with rate declines of at least one-half point. Two areas recorded jobless rate increases from January 2002 of at least a full

percentage point—Hartford, Conn. (+1.2 percentage points), and New York, N.Y. (+1.1 points). Five additional areas registered rate increases of 0.5 percentage point or more.

#### Metropolitan Area Nonfarm Employment (Not Seasonally Adjusted)

Among the 272 metropolitan areas for which over-the-year comparisons could be made, 168 reported over-the-year increases in employment, 98 reported decreases, and 6 had no change. (See note below on boundary changes in the Denver and Boulder-Longmont metropolitan areas.) The largest over-the-year employment increases were reported in Washington, D.C.-Md.-Va.- W.Va. (+42,900), Riverside-San Bernardino, Calif. (+26,500), and Las Vegas, Nev.-Ariz. (+22,500). The largest percentage increases in employment occurred in Elkhart-Goshen, Ind. (+6.8 percent), Houma, La. (+4.6 percent), and Brownsville-Harlingen-San Benito, Texas (+4.4 percent).

The largest over-the-year employment declines were posted in San Jose, Calif. (-44,100), New York, N.Y. (-38,400), and Boston, Mass.-N.H. (-35,200). The largest over-the-year percentage declines in employment were reported in San Jose, Calif. (-4.8 percent), Tulsa, Okla. (-4.7 percent), Flint, Mich. (-4.2 percent), and Lowell, Mass.-N.H. (-4.1 percent). (See table 2.)

Over-the-year nonfarm employment comparisons could be made in 37 metropolitan areas with annual average employment levels above 750,000 in 2002. (See note below.) Employment declined in 22 of these 37 areas. The largest over-the-year percentage declines in employment in these large metropolitan areas were posted in San Jose, Calif. (-4.8 percent), Kansas City, Mo.-Kan. (-2.3 percent), and San Francisco, Calif. (-2.2 percent). Among the largest areas, Las Vegas, Nev.-Ariz., had the highest over-the-year percentage increase in employment (+2.9 percent), followed by Riverside-San Bernardino, Calif. (+2.6 percent), and Orlando, Fla. (+1.9 percent).

Manufacturing was the weakest industry, with 209 metropolitan areas experiencing employment losses over the year, followed by the information industry and by trade, transportation, and utilities with employment losses in 152 and 138 metropolitan areas, respectively. Employment growth was most prevalent in education and health services, in the leisure and hospitality industry, and in government, with increases occurring in 230, 185, and 168 metropolitan areas, respectively.

---

The Regional and State Employment and Unemployment release for February is scheduled to be issued on April 15. The Metropolitan Area Employment and Unemployment release for February is scheduled to be issued on April 22.

#### **Change in Definitions of the Boulder-Longmont and Denver Metropolitan Areas**

Effective with data for January 2003, the boundaries for the Boulder-Longmont, Colo., and Denver, Colo., PMSAs reflect the recognition of Broomfield City/County, Colo. The Denver PMSA now includes all of the newly recognized Broomfield City/County and the Boulder-Longmont PMSA reflects a corresponding loss of territory. The boundary definitions for each of these areas no longer match the official Office of Management and Budget definitions. Because of these changes, 2003 data for Boulder-Longmont and Denver are not strictly comparable with data for earlier years.

## **Revisions to State and Metropolitan Area Data Series**

### **Labor Force Data Series**

Labor force estimates for all states, the District of Columbia, the Los Angeles-Long Beach metropolitan area, and New York City presented in table 1 of this release have been revised to incorporate population controls reflecting the results of Census 2000, reestimation of models, and benchmarking to Current Population Survey annual averages. Labor force estimates for the remaining metropolitan areas have been revised to reflect updated inputs and the new statewide estimates. Data back to 2000 are subject to revision. Questions about these changes to the labor force data series can be directed to the Division of Local Area Unemployment Statistics at 202-691-6392.

### **Nonfarm Payroll Data Series**

All nonfarm payroll series for states and metropolitan areas, produced from the Current Employment Statistics (CES) program and presented in table 2, have been converted from a 1987 Standard Industrial Classification (SIC) system basis to a 2002 North American Industry Classification System (NAICS) basis. NAICS is the product of a cooperative effort on the part of the statistical agencies of the United States, Canada, and Mexico. NAICS uses a production-oriented approach to categorize economic units. Units with similar production processes are classified in the same industry. NAICS focuses on **how** products and services are created, as opposed to the SIC focus on **what** is produced. This approach yields significantly different industry groupings than those produced by the SIC approach. Consequently, the NAICS-based data by industry are not comparable with the previously published SIC-based data; SIC-based data series are no longer being produced or published. See <http://www.bls.gov/sae/saenaims.htm> for complete information on the conversion of the CES state and area data to NAICS. Also, see <http://www.bls.gov/sae/saewhat.htm> for an overview of NAICS classification and its differences from the SIC system. All state and metropolitan area nonfarm payroll employment estimates have a NAICS-based history extending back to January 1990, except for total nonfarm employment estimates which have retained their beginning dates. State and metropolitan estimates of average weekly hours, average hourly earnings, and other data series begin on a NAICS basis in January 2001.

In addition, the nonfarm payroll data series reflect March 2002 benchmark levels, the completion of the conversion of the CES survey sample from a quota-based basis to a probability-based basis, and the introduction of the use of small-domain models as the official estimators for the approximately 10 percent of CES published series which have insufficient sample for direct sample-based estimates.

Additional information on the changes to the nonfarm payroll data series for states and metropolitan areas will appear in an article in the March 2003 issue of *Employment and Earnings* or can be obtained through the BLS public database at the state and area homepage at <http://www.bls.gov/sae/> or by calling 202-691-6559.

# Technical Note

This release presents labor force and unemployment data from the Local Area Unemployment Statistics (LAUS) program (table 1) for 337 metropolitan areas, including those in Puerto Rico. Nonfarm payroll employment estimates from the Current Employment Statistics (CES) program (table 2) are provided for over 270 of these areas. State estimates were previously published in the news release, *Regional and State Employment and Unemployment*, and are republished in this release for ease of reference. The LAUS and CES programs are both Federal-State cooperative endeavors.

## Labor force and unemployment—from the LAUS program

**Definitions.** The labor force and unemployment data are based on the same concepts and definitions as those used for the official national estimates obtained from the Current Population Survey (CPS), a sample survey of households that is conducted for the Bureau of Labor Statistics (BLS) by the U.S. Census Bureau. The labor force includes both the employed and the unemployed. Employed persons are those who did any work at all for pay or profit in the survey reference week (the week including the 12th of the month) or worked 15 hours or more without pay in a family business or farm, plus those not working who have a job from which they were temporarily absent, whether or not paid, for such reasons as labor-management dispute, illness, or vacation. Unemployed persons are those who did not work at all (in the reference week), have actively looked for a job (sometime in the 4-week period ending with the survey reference week), and are currently available for work; persons on layoff expecting recall need not be looking for work to be counted as unemployed.

**Method of estimation.** Effective January 1996, estimates for all states, the District of Columbia, the Los Angeles-Long Beach metropolitan area, and New York City are produced using estimating equations based on regression techniques. For all other substate areas, estimates are prepared through indirect estimation procedures. Employment estimates, which are based largely on “place of work” estimates from the CES program, are adjusted to refer to place of residence as used in the CPS. Unemployment estimates are aggregates of persons previously employed in industries covered by state unemployment (UI) laws and entrants to the labor force data from the CPS. The substate estimates of employment and unemployment which geographically exhaust the entire state, are adjusted proportionally to ensure that they add to the independently estimated state totals. A detailed description of the estimation procedures is available from BLS upon request.

**Annual revisions.** Labor force and unemployment data shown for the prior year reflect adjustments made at the end of each year, usually with January estimates. The adjusted estimates reflect updated population data from the U.S. Census Bureau and any revisions in the other data sources. In addition, data for all states, the District of Columbia, and the two large substate areas noted are adjusted annually to equal the CPS annual averages, usually effective with January estimates. All other substate estimates are adjusted to add to the revised (benchmarked) state estimates.

## Employment—from the CES program

**Definitions.** Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period which includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2002 version of the North American Industry Classification System.

**Method of estimation.** The employment data are estimated using a “link relative” technique in which a ratio (link relative) of current-month employment to that of the previous month is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these ratios. Small-domain models are used as the official estimators for the approximately 10 percent of CES published series which have insufficient sample for direct sample-based estimates.

**Annual revisions.** Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports which are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

## Reliability of the estimates

The estimates presented in this release are based on sample survey and administrative data and thus are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data are also subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the special estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding. With respect to the LAUS program, unemployment rates are computed, in most instances, from unrounded data rather than from data that may be displayed in the tables; differences, however, are generally insignificant.

**Labor force and unemployment estimates.** Measures of sampling error, in the form of the standard errors for state annual average estimates derived from the CPS, are available in the annual BLS bulletin, *Geographic Profile of Employment and Unemployment*. Error measures cannot be computed for substate areas because of the special estimation processes used. Measures of nonsampling error for CPS data are not available, but additional information on the subject is provided in the BLS monthly periodical, *Employment and Earnings*.

**Employment estimates.** Measures of sampling error will be available for state CES data, at the supersector level and for metropolitan area CES data at the total nonfarm level. Information on recent

benchmark revisions for states is available on the BLS Web site at (<http://www.bls.gov/sae/>).

**Area definitions.** The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget, dated June 30, 1996. A detailed list of the geographic definitions is published annually in the May issue of *Employment and Earnings*.

#### **Additional information**

More complete information on the technical procedures used to develop these estimates and additional data appear in *Employment and Earnings*, which is available by subscription from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (telephone 202-512-1800).

Estimates of unadjusted and seasonally adjusted labor force and unemployment data for states, census regions and divisions, and two areas are available in the news release, *Regional and State Employment and Unemployment*. Estimates of labor force and unemployment for all states, metropolitan areas, labor market areas, counties, cities with a population of 25,000 or more, and other areas used in the administration of various federal economic assistance programs are available from the BLS Internet at (<http://stats.bls.gov/lau/>). Employment data from the CES program are available at (<http://stats.bls.gov/sae/>).

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone: 1-800-877-8339.

<sup>1</sup> Data for 2003 are not directly comparable with data for previous years because of a change in metropolitan area definitions.

<sup>p</sup> = preliminary.

NOTE: Data refer to place of residence. Data for Puerto Rico are derived from a monthly household survey similar to the Current Population Survey. Data for all States, the District of Columbia, the Los Angeles-Long Beach metropolitan area, and

New York City have been revised to incorporate population controls reflecting the results of Census 2000, reestimation of models, and benchmarking to Current Population Survey annual averages. Data for the remaining metropolitan areas have been revised to reflect updated inputs and the new statewide estimates. See the note on page 3 for more information on the changes. Area definitions are published annually in the May issue of *Employment and Earnings*.

<sup>1</sup> Data for 2003 are not directly comparable with data for previous years because of a change in metropolitan area definitions.

<sup>P</sup> = preliminary.

NOTE: Data reflect the conversion to the 2002 version of the North American Industry Classification System (NAICS) as the basis for the assignment and tabulation of

economic data by industry, replacing the 1987 Standard Industrial Classification (SIC) system. Due to differences in NAICS and SIC structures, NAICS-based data by industry are not comparable to the SIC-based data. In addition, data reflect March 2002 benchmark levels and the introduction of estimates based on small-domain models for some areas. See the note on page 3 for more information on the changes.

**Unemployment rates for metropolitan areas,  
not seasonally adjusted, January 2003**  
(U.S. rate = 6.5 percent)

NOTE: Map includes data for 323 areas based on 1993 definitions.
