PRODUCER PRICE INDEXES – JANUARY 2016

The Producer Price Index for final demand advanced 0.1 percent in January, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. Final demand prices decreased 0.2 percent in December and advanced 0.4 percent in November. On an unadjusted basis, the final demand index declined 0.2 percent for the 12 months ended in January. (See table A.)

The increase in the final demand index for January can be traced to a 0.5-percent advance in prices for final demand services. In contrast, the index for final demand goods moved down 0.7 percent.

In January, the index for final demand less foods, energy, and trade services advanced 0.2 percent for the second consecutive month. For the 12 months ended in January, prices for final demand less foods, energy, and trade services climbed 0.8 percent.

Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted

Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted

Final Demand

Final demand services: The index for final demand services advanced 0.5 percent in January, the third consecutive rise. Leading the broad-based increase in January, margins for final demand trade services moved up 0.9 percent. (Trade indexes measure changes in margins received by wholesalers and retailers.) The indexes for both final demand services less trade, transportation, and warehousing and for final demand transportation and warehousing services rose 0.4 percent.

Product detail: Nearly half of the January increase in prices for final demand services is attributable to a 4.0-percent advance in margins for machinery and equipment wholesaling. The indexes for services related to securities brokerage and dealing; loan services (partial); apparel, footwear, and accessories retailing; fuels and lubricants retailing; and airline passenger services also moved higher. Conversely, margins for food and alcohol retailing declined 4.1 percent. The indexes for health, beauty, and optical goods retailing and for physician care also decreased. (See table 4.)

Final demand goods: Prices for final demand goods fell 0.7 percent in January for the second consecutive month. In January, the decrease in the index for final demand goods can be traced to prices for final demand energy goods, which fell 5.0 percent. In contrast, the index for final demand foods advanced 1.0 percent. Prices for final demand goods less foods and energy were unchanged.

Product detail: Over half of the January decrease in prices for final demand goods can be attributed to the gasoline index, which fell 8.8 percent. Prices for home heating oil, electric power, jet fuel, basic organic chemicals, and corn also moved lower. Conversely, the indexes for fresh and dry vegetables jumped 17.3 percent. Prices for pharmaceutical preparations and residential natural gas also increased.

Table A. Monthly and 12-month percent changes in selected final demand price indexes, seasonally adjusted

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2015. In addition, indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Intermediate Demand by Commodity Type

Within intermediate demand, prices for processed goods fell 1.2 percent, the index for unprocessed goods declined 0.7 percent, and prices for services climbed 1.1 percent. (See tables B and C.)

Processed goods for intermediate demand: Prices for processed goods for intermediate demand fell 1.2 percent in January, the seventh consecutive decline. In January, nearly two-thirds of the broad-based decrease can be traced to the index for processed energy goods, which dropped 4.6 percent. Prices for processed materials less foods and energy and for processed foods and feeds also moved down, falling 0.5 percent and 0.4 percent, respectively. For the 12 months ended in January, the index for processed goods for intermediate demand decreased 5.4 percent.

Product detail: In January, a major factor in the decrease in the index for processed goods for intermediate demand was an 18.9-percent drop in prices for jet fuel. The indexes for basic organic chemicals, gasoline, plastic resins and materials, industrial electric power, and lubricating oil base stocks also moved lower. In contrast, prices for natural gas to electric utilities advanced 3.2 percent. The indexes for beef and veal and for biological products for human use also increased. (See table 5.)

Unprocessed goods for intermediate demand: Prices for unprocessed goods for intermediate demand fell 0.7 percent in January, the seventh consecutive decline. In January, the decrease can be traced to the index for unprocessed energy goods, which dropped 10.0 percent. Conversely, prices for unprocessed foodstuffs and feedstuffs jumped 5.5 percent. The index for unprocessed nonfood materials less energy was unchanged. For the 12 months ended in January, prices for unprocessed goods for intermediate demand fell 17.9 percent.

Product detail: Leading the decline in the index for unprocessed goods for intermediate demand, prices for crude petroleum dropped 23.1 percent. The indexes for corn, natural gas, raw milk, nonferrous scrap, and slaughter hogs also fell. In contrast, prices for slaughter steers and heifers climbed 13.4 percent. The indexes for slaughter poultry and carbon steel scrap also increased.

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2015. In addition, indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Services for intermediate demand: The index for services for intermediate demand moved up 1.1 percent in January, the third straight advance. Leading the January increase, prices for services less trade, transportation, and warehousing for intermediate demand climbed 1.8 percent. The index for trade services for intermediate demand edged up 0.1 percent. Conversely, prices for transportation and warehousing services for intermediate demand declined 0.7 percent. For the 12 months ended in January, the index for services for intermediate demand rose 1.5 percent, the largest advance since a 1.6-percent increase in August 2015.

Product detail: Over 70 percent of the January rise in the index for services for intermediate demand can be traced to prices for services related to securities brokerage and dealing, which jumped 31.1 percent. The indexes for business loans (partial); metals, minerals, and ores wholesaling; food wholesaling; management consulting services; and airline passenger services also moved higher. In contrast, prices for courier, messenger, and U.S. postal services decreased 1.7 percent. The indexes for securities brokerage, dealing, and investment advice and for chemicals and allied products wholesaling also fell.

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2015. In addition, indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Intermediate Demand by Production Flow

Stage 4 intermediate demand: The index for stage 4 intermediate demand increased 0.3 percent in January following five straight declines. In January, prices for total services inputs to stage 4 intermediate demand rose 0.9 percent. Conversely, prices for total goods inputs moved down 0.3 percent. (See table D.) Advances in the indexes for services related to securities brokerage and dealing; business loans (partial); unprocessed finfish; beef and veal; metals, minerals, and ores wholesaling; and food wholesaling outweighed decreases in the indexes for gasoline, industrial electric power, and machinery and equipment parts and supplies wholesaling. (See table 6.) For the 12 months ended in January, prices for stage 4 intermediate demand fell 0.9 percent.

Stage 3 intermediate demand: The index for stage 3 intermediate demand inched up 0.1 percent in January following six consecutive decreases. In January, prices for total services inputs to stage 3 intermediate demand increased 0.8 percent. In contrast, the index for total goods inputs fell 0.6 percent. Higher prices for services related to securities brokerage and dealing, slaughter steers and heifers, slaughter poultry, business loans (partial), and ungraded chicken eggs outweighed lower prices for gasoline; jet fuel; industrial chemicals; and courier, messenger, and U.S. postal services. For the 12 months ended in January, the index for stage 3 intermediate demand moved down 4.1 percent.

Stage 2 intermediate demand: The index for stage 2 intermediate demand fell 1.0 percent in January, the third straight decline. In January, prices for total goods inputs to stage 2 intermediate demand dropped 3.9 percent. Conversely, the index for total services inputs advanced 1.0 percent. Decreasing prices for crude petroleum; plastic resins and materials; natural gas; courier, messenger, and U.S. postal services; industrial chemicals; and corn outweighed rising prices for services related to securities brokerage and dealing, airline passenger services, and oilseeds. For the 12 months ended in January, the index for stage 2 intermediate demand fell 4.7 percent.

Stage 1 intermediate demand: The index for stage 1 intermediate demand moved down 0.2 percent in January, the seventh consecutive decline. In January, prices for total goods inputs to stage 1 intermediate demand fell 1.4 percent. In contrast, prices for total services inputs rose 1.3 percent. Declines in the indexes for industrial chemicals, crude petroleum, gasoline, nonferrous scrap, diesel fuel, and chemicals and allied products wholesaling outweighed rising prices for services related to securities brokerage and dealing, business loans (partial), and carbon steel scrap. For the 12 months ended in January, the index for stage 1 intermediate demand fell 6.3 percent.

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2015. In addition, indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

The Producer Price Index for February 2016 is scheduled to be released on Tuesday, March 15, 2016 at 8:30 a.m. (EDT).

Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2015 for the Final Demand-Intermediate Demand (FD-ID) System and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2011 through December 2015.

Revised seasonally adjusted data for this period, as well as seasonal adjustment factors for directly adjusted commodity indexes to be used through December 2016, were released February 12, 2016. To obtain this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov, or (202) 691-7705, or visit the Producer Price Index website at www.bls.gov/ppi.

Tables E and F below provide monthly seasonally adjusted percent changes for major FD-ID system indexes in 2015, based on former and recalculated seasonal factors. These percent changes include final price data through August 2015 and may differ from values shown in tables A through D of this release, which include final price data through September 2015.

Table E. Over-the-month percent changes in major final demand indexes, seasonally adjusted, using former and recalculated seasonal factors for 2015

Month	Final demand		Final demand goods		Final demand services

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2013, the PPI covered about 70 percent of services as measured by 2007 Census revenue, and 34 percent of construction.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2012, final demand goods were about 34.5 percent of overall final demand, final demand services were roughly 63.5 percent, and final demand construction was about 2.0 percent of final demand. Within intermediate demand, coverage of services for intermediate demand resulted in about a 45 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table

from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by

industries in each of the four stages of production. The stage 4 intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see <http://www.bls.gov/ppi/industryflowstage.htm>.

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the PPI includes medical services paid for by third parties. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at <http://www.bls.gov/opub/mlr/>.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In

addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted via Internet, mail, and fax.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2007 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2007 to December 2011, PPI weights were derived from 2002 shipment values. Industry indexes now are calculated under the 2012 NAICS structure utilizing 2007 value of shipment weights and 2002 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base

later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at www.bls.gov/opus/hom/homch14.htm.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts

such as purchasing agreements or real estate leases. For more information, see *Escalation Guide for Contracting Parties*, on the Web at www.bls.gov/ppi/ppiescalation.htm.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of almost 300 seasonally adjusted series, only 31 were subject to intervention in 2013.

For more information relating to seasonal adjustment methods, see “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*, and “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 5 million instances of PPI data

and tables being downloaded from the Internet during the 12 months ended December 31, 2012.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). On this page, under the tab labeled “Featured PPI databases” links provide the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a

“wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpufd4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

*Industry-product code,
discontinued NAICS series*

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

¹ Further information about the Final Demand-Intermediate Demand Aggregation system is available online at <http://www.bls.gov/ppi/fdidaggregation.htm>.

² Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

³ The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

⁴ PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

⁵ Trade indexes measure changes in margins received by wholesalers and retailers.

⁶ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁷ Distributive services include transportation, warehousing, and trade of goods.

"-" Data not available.

¹ Further information about the Final Demand-Intermediate Demand Aggregation system is available online at <http://www.bls.gov/ppi/fdidaggregation.htm>

² Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

³ The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

⁵ Includes intermediate trade, transportation, and warehousing services.

⁶ Includes crude petroleum.

⁷ Excludes crude petroleum.

"-" Data not available.

¹ Further information about the Final Demand-Intermediate Demand Aggregation system is available online at <http://www.bls.gov/ppi/fdidaggregation.htm>

² Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

³ The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

"-" Data not available.

Table 4. Producer price indexes and percent changes for selected commodity groupings by final demand category¹ — Continued

¹ Further information about the Final Demand-Intermediate Demand Aggregation system is available online at <http://www.bls.gov/ppi/fdidaggregation.htm>

² The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not seasonally adjusted.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Table 5. Producer price indexes and percent changes for selected commodity groupings of intermediate demand by commodity type category¹ — Continued
 [1982=100, unless otherwise indicated]

² The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not seasonally adjusted.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Table 6. Producer price indexes and percent changes for selected commodity groupings of intermediate demand by production flow category¹
 [1982=100, unless otherwise indicated]

Grouping	Commodity code	Other index base	Unadjusted index			Unadjusted percent change to Jan. 2016 from:		Seasonally adjusted percent change from:		
			Sept. 2015 ²	Dec. 2015 ²	Jan. 2016 ²	Jan. 2015	Dec. 2015	Oct. to Nov.	Nov. to Dec.	Dec. to Jan.
Stage 4 intermediate demand.³		11/09	109.9	108.6	109.0	-0.9	0.4	-0.1	-0.5	0.3

Unprocessed fuel.....	00/82	135.1	130.8	128.7	117.7	120.3	118.3
Services for intermediate demand.....		110.9	110.3	110.0	110.1	110.2	111.4
Trade services for intermediate demand.....		113.6	113.5	113.5	113.3	112.1	112.2
Transportation and warehousing services for intermediate demand.....		119.3	119.1	119.2	119.2	119.1	118.3
Services less trade, transportation, and warehousing for intermediate demand.....		108.7	107.8	107.4	107.5	108.0	109.9
Intermediate demand by production flow							
Stage 4 intermediate demand.....		110.3	109.7	109.5	109.4	108.9	109.2
Inputs to stage 4 goods producers.....		108.8	108.5	108.4	108.0	107.4	107.1
Inputs to stage 4 services producers.....		111.8	111.2	110.7	110.8	110.6	111.5
Inputs to stage 4 construction producers.....		109.1	107.9	108.1	108.1	107.1	106.8
Stage 3 intermediate demand.....		111.3	109.3	108.5	108.1	107.2	107.3
Inputs to stage 3 goods producers.....		116.6	114.6	113.1	111.9	110.7	111.5
Inputs to stage 3 services producers.....		107.4	105.6	105.3	105.5	105.2	104.7
Inputs to stage 3 construction producers.....		98.6	93.8	96.0	95.6	88.0	87.1
Stage 2 intermediate demand.....		98.9	98.1	98.2	97.0	96.5	95.5
Inputs to stage 2 goods producers.....		90.0	89.1	89.6	87.0	85.3	82.1
Inputs to stage 2 services producers.....		107.6	107.0	106.7	106.7	107.3	108.4
Stage 1 intermediate demand.....		107.2	105.6	105.0	104.2	102.8	102.6
Inputs to stage 1 goods producers.....		102.9	101.2	100.0	98.4	96.9	95.7
Inputs to stage 1 services producers.....		111.4	109.6	109.6	109.5	108.1	109.0
Inputs to stage 1 construction producers.....		110.5	109.4	109.4	109.5	108.7	108.3
Special groupings							
Final demand less foods and energy.....	04/10	109.1	109.1	108.8	109.1	109.3	109.7
Final demand less foods.....	04/10	108.2	107.8	107.5	107.9	107.7	107.8
Final demand less energy.....	04/10	109.4	109.4	109.0	109.4	109.4	109.9
Total finished ²	01/10	109.8	109.4	109.1	109.6	109.4	109.6
Total exports.....	04/10	105.6	105.2	104.9	104.6	104.5	104.6
Total Government purchases.....	04/10	105.3	104.7	104.7	104.7	104.3	104.0
Total private capital investment (goods, services, and construction).....	04/10	107.2	107.3	107.4	107.6	108.1	108.8
Finished goods ²	00/82	195.2	193.0	192.4	193.1	191.6	190.6
Processed materials less foods and feeds.....	00/82	187.7	185.3	184.8	184.0	182.4	180.0
Processed foods and feeds.....	00/82	199.7	196.1	194.7	194.0	189.2	188.5
Processed energy goods.....	00/82	171.9	164.5	162.8	161.3	155.5	148.4
Processed materials less foods and energy.....	00/82	189.1	188.1	188.0	187.3	186.8	185.8
Unprocessed materials less agricultural products.....	00/82	178.9	177.6	178.3	165.8	158.5	149.3
Unprocessed energy materials.....	00/82	136.7	135.3	138.7	126.1	118.7	106.8
Unprocessed nonfood materials less energy.....	00/82	288.8	288.2	281.6	272.0	268.1	268.2
Total goods inputs to stage 4 intermediate demand.....	04/10	106.6	105.8	105.7	105.4	104.6	104.3
Total services inputs to stage 4 intermediate demand.....	04/10	110.6	110.1	109.8	110.0	109.9	110.9
Total goods inputs to stage 3 intermediate demand.....	04/10	104.8	101.7	100.4	99.6	97.9	97.3
Total services inputs to stage 3 intermediate demand.....	04/10	109.3	108.9	108.7	108.7	108.8	109.7
Total goods inputs to stage 2 intermediate demand.....	04/10	83.6	82.6	83.2	80.7	79.0	75.9
Total services inputs to stage 2 intermediate demand.....	04/10	109.0	108.4	108.1	108.0	108.7	109.8
Total goods inputs to stage 1 intermediate demand.....	04/10	91.2	89.1	88.5	87.2	85.5	84.3
Total services inputs to stage 1 intermediate demand.....	04/10	113.7	113.0	112.6	112.6	112.0	113.5

¹ All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for September 2015 have been recalculated to incorporate late reports and corrections by respondents.

² PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

Table 8. Producer price indexes for selected commodity groupings, not seasonally adjusted
[1982=100, unless otherwise indicated]

Grouping	Commodity code	Other index base	Index			Percent change to Jan. 2016 from:	
			Sept. 2015 ¹	Dec. 2015 ¹	Jan. 2016 ¹	Jan. 2015	Dec. 2015
Goods							
All commodities.....			189.1	183.8	182.5	-4.9	-0.7
Farm products, processed foods and feeds.....			196.3	188.1	190.2	-5.9	1.1
Farm products.....	01		170.7	159.9	166.5	-7.9	4.1
Processed foods and feeds.....	02		209.0	202.1	202.0	-5.2	0.0
Industrial commodities.....			187.4	182.7	180.7	-4.8	-1.1
Textile products and apparel.....	03		143.8	143.7	143.9	-0.6	0.1
Hides, skins, leather, and related products.....	04		200.7	195.9	204.6	-10.2	4.4
Fuels and related products and power.....	05		158.2	143.0	135.5	-14.7	-5.2
Chemicals and allied products.....	06		264.1	263.1	262.0	-1.8	-0.4
Rubber and plastic products.....	07		186.5	184.6	184.5	-2.6	-0.1
