TABLE R111. Incidence rates¹ for nonfatal occupational injuries and illnesses involving days away from work² per 10,000 full-time workers by event or exposure leading to injury or illness and gender, private industry, 2013 — Continued

Event or exposure	Event code ³	Private industry ⁴	Gender

Multiple types of overexertions and bodily reactions	78	.2	.2	.1
Overexertion and bodily reaction and exertion, n.e.c.	79	.1	.1	.1
Nonclassifiable	9999	.9	1.1	.6

¹ Incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as: (N/EH) x 20,000,000 where

N = number of injuries and illnesses
 EH = total hours worked by all employees during the calendar year

20,000,000 = base for 10,000 equivalent full-time workers (working 40 hours per week, 50 weeks per year)

- ² Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
- ³ Based on the Occupational Injury and Illness Classification System 2.01 developed by the Bureau of Labor Statistics.
- ⁴ Excludes farms with fewer than 11 employees.
- ⁵ Data too small to be displayed.

Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.
