¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number of sample cases is very small and/or the unemployment rate is low.

³ Less than 500 persons.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals due to rounding. Detail for race and Hispanic or Latino groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in the White, Black or African American, and Asian groups. Data incorporate updated 2000 census-based population controls.
