PRODUCER PRICE INDEXES – MARCH 2023

The Producer Price Index for final demand declined 0.5 percent in March, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. Final demand prices were unchanged in February and increased 0.4 percent in January. (See table A.) On an unadjusted basis, the index for final demand advanced 2.7 percent for the 12 months ended in March.

In March, two-thirds of the decline in the index for final demand can be attributed to a 1.0-percent decrease in prices for final demand goods. The index for final demand services moved down 0.3 percent.

Prices for final demand less foods, energy, and trade services edged up 0.1 percent in March after rising 0.2 percent in February. For the 12 months ended in March, the index for final demand less foods, energy, and trade services increased 3.6 percent.

Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted

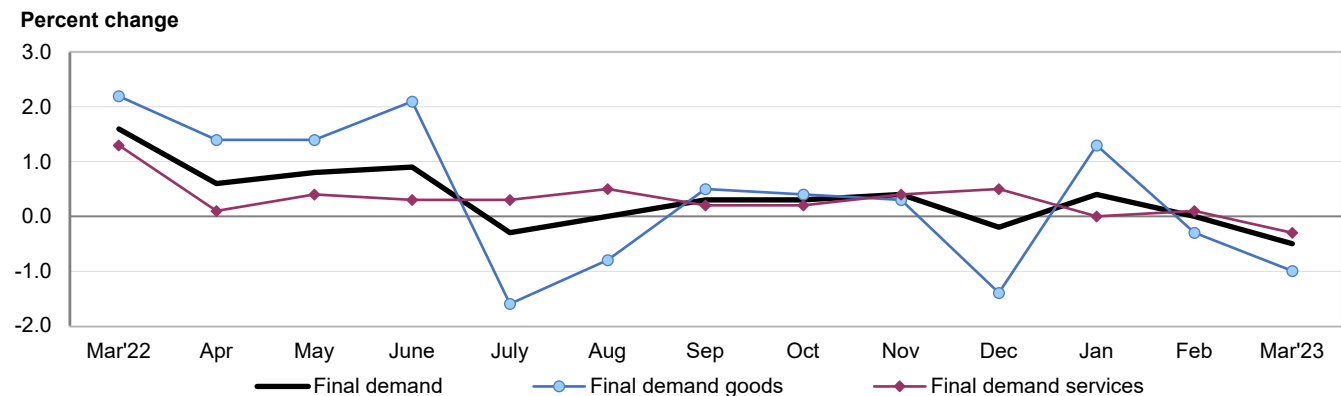

Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted

Final Demand

Final demand goods: Prices for final demand goods decreased 1.0 percent in March after falling 0.3 percent in February. The March decline is attributable to the index for final demand energy, which dropped 6.4 percent. In contrast, prices for final demand goods less foods and energy and for final demand foods advanced 0.3 percent and 0.6 percent, respectively.

Product detail: Eighty percent of the March decline in the index for final demand goods can be traced to an 11.7-percent drop in prices for gasoline. The indexes for diesel fuel, residential natural gas, jet fuel, electric power, and fresh and dry vegetables also fell. Conversely, prices for light motor trucks increased 0.7 percent. The indexes for chicken eggs and for meats also moved higher. (See table 2.)

Final demand services: Prices for final demand services moved down 0.3 percent in March, the largest decline since falling 0.5 percent in April 2020. Leading the March decrease, margins for final demand trade services dropped 0.9 percent. (Trade indexes measure changes in margins received by wholesalers and retailers.) The index for final demand transportation and warehousing services fell 1.3 percent. In contrast, prices for final demand services less trade, transportation, and warehousing edged up 0.1 percent.

Product detail: A 7.3-percent drop in margins for machinery and vehicle wholesaling was a major factor in the March decrease in prices for final demand services. The indexes for truck transportation of freight, portfolio management, fuels and lubricants retailing, loan services (partial), and automobiles and automobile parts retailing also moved down. Conversely, prices for guestroom rental rose 4.6 percent. The indexes for food retailing and for transportation of passengers (partial) also advanced.

Table A. Monthly and 12-month percent changes in selected final demand price indexes, seasonally adjusted

Month	Total final demand	Final demand less foods, energy, and trade	Final demand goods				Final demand services				Change in final demand from 12 months ago (unadj.)	Change in final demand less foods, energy, and trade from 12 mo. ago (unadj.)

Intermediate Demand by Commodity Type

Within intermediate demand in March, prices for processed goods declined 1.0 percent, the index for unprocessed goods fell 5.0 percent, and prices for services decreased 0.5 percent. (See tables B and C.)

Processed goods for intermediate demand: The index for processed goods for intermediate demand declined 1.0 percent in March after moving down 0.4 percent in February. A major factor in the March decrease was a 5.1-percent drop in prices for processed energy goods. The index for processed foods and feeds edged down 0.1 percent. In contrast, prices for processed materials less foods and energy advanced 0.1 percent. For the 12 months ended in March, the index for processed goods for intermediate demand moved down 1.0 percent, the largest 12-month decrease since a 1.6-percent decline in September 2020.

Product detail: One-third of the March decrease in prices for processed goods for intermediate demand can be traced to a 6.5-percent decline in the index for diesel fuel. Prices for gasoline, utility natural gas, electric power, ethanol, and formula feeds also moved lower. Conversely, the index for primary basic organic chemicals rose 5.6 percent. Prices for structural, architectural, and pre-engineered metal products and for meats also increased.

Unprocessed goods for intermediate demand: The index for unprocessed goods for intermediate demand moved down 5.0 percent in March, the largest decline since falling 9.7 percent in October 2022. The broad-based decrease in March was led by prices for unprocessed energy goods, which dropped 11.9 percent. The indexes for unprocessed foodstuffs and feedstuffs and for unprocessed nonfood materials less energy also moved lower, 1.3 percent and 0.3 percent, respectively. For the 12 months ended in March, prices for unprocessed goods for intermediate demand declined 17.0 percent, the largest 12-month decrease since a 20.1-percent drop in May 2020.

Product detail: Half of the March decline in the index for unprocessed goods for intermediate demand is due to a 10.2-percent decrease in prices for crude petroleum. The indexes for natural gas; corn; raw milk; hay, hayseeds, and oilseeds; and raw cotton also fell. In contrast, prices for ungraded chicken eggs jumped 44.1 percent. The indexes for nonferrous metal ores and for coal also moved higher.

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for November 2022 through February 2023 have been revised to reflect the availability of late reports and corrections by respondents.

Services for intermediate demand: The index for services for intermediate demand moved down 0.5 percent in March following a 0.3-percent increase in February. Over half of the broad-based decline can be attributed to a 0.5-percent decrease in prices for services less trade, transportation, and warehousing for intermediate demand. The index for transportation and warehousing services for intermediate demand fell 0.9 percent. Margins for trade services for intermediate demand declined 0.5 percent. For the 12 months ended in March, the index for services for intermediate demand increased 4.2 percent.

Product detail: Nearly 60 percent of the March decline in the index for services for intermediate demand can be attributed to a 5.4-percent decrease in prices for loan services (partial). The indexes for portfolio management, truck transportation of freight, gross rents for retail properties, arrangement of freight and cargo transportation, and fuels and lubricants retailing also moved lower. Conversely, margins for food wholesaling increased 1.8 percent. The indexes for deposit services (partial) and for transportation of passengers (partial) also advanced.

Intermediate Demand by Production Flow

Stage 4 intermediate demand: The index for stage 4 intermediate demand moved down 0.5 percent in March following no change in February. In March, prices for both total services inputs and for total goods inputs to stage 4 intermediate demand declined 0.5 percent. (See table D.) Decreases in the indexes for loan services (partial), portfolio management, electric power, gross rents for retail properties, corn, and diesel fuel outweighed increases in the indexes for food wholesaling, motor vehicles and equipment, and investment banking. For the 12 months ended in March, prices for stage 4 intermediate demand moved up 3.2 percent.

Stage 3 intermediate demand: The index for stage 3 intermediate demand decreased 1.0 percent in March after declining 0.2 percent in February. In March, prices for total goods inputs to stage 3 intermediate demand fell 1.3 percent, and the index for total services inputs moved down 0.7 percent. Lower prices for raw milk, diesel fuel, loan services (partial), corn, jet fuel, and arrangement of freight and cargo transportation outweighed increases in the indexes for ungraded chicken eggs, slaughter cattle, and temporary help services. For the 12 months ended in March, prices for stage 3 intermediate demand decreased 1.7 percent, the largest 12-month decline since falling 2.4 percent in September 2020.

Stage 2 intermediate demand: Prices for stage 2 intermediate demand fell 2.7 percent in March, the largest decline since moving down 4.7 percent in October 2022. In March, the index for total goods inputs to stage 2 intermediate demand dropped 5.2 percent, and prices for total services inputs declined 0.8 percent. Decreases in the indexes for crude petroleum; gas fuels; loan services (partial); fuels and lubricants retailing; hay, hayseeds, and oilseeds; and ethanol outweighed advances in the indexes for carbon steel scrap, deposit services (partial), and food wholesaling. For the 12 months ended in March, prices for stage 2 intermediate demand moved down 4.0 percent, the largest 12-month decline since a 5.3-percent drop in July 2020.

Stage 1 intermediate demand: Prices for stage 1 intermediate demand decreased 0.7 percent in March after falling 0.4 percent in February. In March, the index for total goods inputs to stage 1 intermediate demand moved down 1.2 percent, and prices for total services inputs fell 0.2 percent. Declining prices for diesel fuel, corn, utility natural gas, ethanol, portfolio management, and truck transportation of freight outweighed increases in the indexes for guestroom rental, primary basic organic chemicals, and investment banking. For the 12 months ended in March, prices for stage 1 intermediate demand advanced 0.4 percent.

The Producer Price Index for April 2023 is scheduled to be released on Thursday, May 11, 2023, at 8:30 a.m. (ET).

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2023, the PPI covered 69 percent of services as measured by 2017 Census revenue, and 17 percent of construction.

More than 64,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2022, final demand goods were about 30.7 percent of overall final demand, final demand services were roughly 66.6 percent, and final demand construction was about 2.7 percent of final demand. Within intermediate demand, coverage of services for intermediate demand resulted in about a 45 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table

from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4

intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see www.bls.gov/ppi/fd-id/ppi-intermediate-demand-by-production-flow-industry-stage-assignments.htm.

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the PPI includes medical services paid for by third parties. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at www.bls.gov/opub/mlr/.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In

addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted online via the BLS Internet Data Collection Facility (IDCF). Data provided by survey respondents are supplemented with data from other sources for some areas.

Price data are provided by survey respondents on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes, not actual prices. All PPIs are subject to monthly revisions up to 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Information on these resampling efforts are noted in the *PPI News Release* and *PPI Detailed Report* in the months they occur.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code at their date of introduction and the *PPI Detailed Report* issue that announces their introduction

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2017 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2018 to December 2022, PPI weights were derived from 2012 shipment values. Industry indexes now are calculated under the 2022 NAICS structure utilizing 2017 value of shipment weights and 2012 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982

reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14.htm.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data

that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Price Adjustment Guide for Contracting Parties*, on the Web at: www.bls.gov/ppi/publications/price-adjustment-guide-for-contracting-parties.htm.

Seasonal adjustment is accomplished using X-13 ARIMA, a software package published by the U.S. Census Bureau. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the COVID-19 pandemic. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of over 400 seasonally adjusted commodity series, 69 were subject to intervention in 2023.

For more information relating to seasonal adjustment methods, see “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*, and “PPI and CPI Seasonal Adjustment During the COVID-19 Pandemic” in the May 2022 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to the internet. There were more than 13 million instances of PPI data being downloaded from the BLS website during 2022.

Retrieving PPI data from the PPI Web site

PPI data can be obtained online (www.bls.gov/ppi). On this page, under the tab labeled “Featured PPI databases” links provide the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpufd4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu”. After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

*Industry-product code,
discontinued NAICS series*
ndu212231212231
ndu2122312122312
ndu212231212231214

Provides data for
Lead and zinc ore mining
Lead, zinc concentrates
Lead concentrates

- **Text Files** are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation, such as seasonal factor tables and relative importance tables. The text files can be accessed at download.bls.gov/ or directly from links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

Industry Data	<u>Directory:</u> /pub/time.series/pc
Industry Data - Discontinued (NAICS basis)	/pub/time.series/nd
(SIC basis)	/pub/time.series/pd
Commodity Data (incl. FD-ID)	/pub/time.series/wp
Commodity Data – Discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The “PPI Publications” section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov. If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Table 1. Producer price index percentage changes and weights for Final Demand-Intermediate Demand groupings, seasonally adjusted
[March 2023]

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

² All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

³ PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

⁵ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁶ Distributive services include transportation, warehousing, and trade of goods.

⁷ Includes intermediate trade, transportation, and warehousing services.

⁸ Includes crude petroleum.

⁹ Excludes crude petroleum.

^p Preliminary

"/" Data not available.

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² Seasonal tests did not indicate the presence of seasonality. Data shown is not seasonally adjusted.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

p Preliminary

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Services								
Services for intermediate demand.....		ID6	3	142.922	142.904	144.183	144.611	143.834
Trade services for intermediate demand ⁵		ID6	33	170.856	168.830	169.861	169.186	168.284
Trade services for manufacturing industries.....	12/12	ID6	331	155.237	153.290	156.231	155.453	155.123
Trade services for nonmanufacturing industries.....	12/12	ID6	332	152.873	151.167	150.161	149.714	148.439
Transportation and warehousing services for intermediate demand.....		ID6	32	157.147	157.205	157.662	157.399	155.946
Transportation of passengers for intermediate demand.....		ID6	321	132.279	136.468	139.777	137.665	139.483
Transportation of passengers for manufacturing industries.....		ID6	3211	132.338	136.630	140.001	137.846	139.697
Transportation of passengers for nonmanufacturing industries.....		ID6	3212	132.333	136.509	139.812	137.705	139.519
Transportation and warehousing of goods for intermediate demand.....		ID6	322	159.849	159.461	159.660	159.571	157.807
Transportation and warehousing of goods for manufacturing industries.....	12/12	ID6	3221	136.729	135.479	134.144	133.612	131.552
Transportation and warehousing of goods for nonmanufacturing industries.....	12/12	ID6	3222	141.663	141.572	142.199	142.253	140.851
Services less trade, transportation, and warehousing for intermediate demand.....		ID6	31	132.819	133.344	134.817	135.607	134.989
Services less trade, transportation, and warehousing for manufacturing industries.....		ID6	311	124.769	125.028	126.466	126.895	127.138
Services less trade, transportation, and warehousing for nonmanufacturing industries.....		ID6	312	133.075	133.609	135.083	135.886	135.238
Construction								
Construction for intermediate demand.....		ID6	4	141.280	141.372	142.459	142.761	143.746
Intermediate Demand by Commodity Type Special Groupings								
Processed materials less foods and feeds.....	00/82	ID6	9111	269.541	262.422	265.609	264.872	262.021
Processed foods and feeds.....	00/82	ID6	9112	256.470	254.928	255.322	250.134	249.881
Processed energy goods.....	00/82	ID6	9113	291.372	262.676	276.728	272.805	258.871
Processed materials less energy.....	00/82	ID6	9118	259.330	258.309	258.496	258.041	258.244
Processed materials less foods and energy.....	00/82	ID6	9115	259.214	258.258	258.404	258.560	258.822
Intermediate distributive services ⁶	04/10	ID6	9116	163.757	162.342	163.018	162.604	161.346
Processed goods plus intermediate distributive services.....	04/10	ID6	9117	150.719	147.681	149.016	148.448	147.073
Unprocessed materials less agricultural products.....	00/82	ID6	9211	304.901	315.205	299.890	276.931	255.971
Unprocessed energy materials ⁷	00/82	ID6	9212	245.714	258.118	239.120	212.936	187.614
Unprocessed materials less energy.....	00/82	ID6	9213	307.423	305.056	295.677	294.435	291.664
Unprocessed nonfood materials less energy ⁸	00/82	ID6	9216	457.406	449.695	456.285	458.702	457.181
Intermediate Demand by Production Flow								
Stage 4 Intermediate Demand								
Stage 4 intermediate demand.....		ID5	4	146.865	146.342	147.760	147.818	147.135
Inputs to stage 4 goods producers.....		ID5	41	146.523	145.823	146.462	146.355	146.056
Goods.....		ID5	411	141.060	140.618	140.768	140.867	140.472
Foods.....		ID5	4111	160.794	157.985	158.312	156.406	153.991
Energy.....		ID5	4112	180.465	179.883	173.418	172.809	164.754
Goods excluding foods and energy.....		ID5	4113	137.795	137.710	137.887	138.298	138.277
Services.....		ID5	412	164.580	163.150	165.361	164.578	164.590
Trade services.....		ID5	4123	175.809	173.850	176.536	175.397	175.491
Transportation and warehousing services.....		ID5	4122	139.944	139.856	139.925	138.678	137.454
Transportation of passengers.....		ID5	41221	132.357	136.653	140.026	137.869	139.722
Transportation and warehousing of goods.....		ID5	41222	150.696	149.745	149.167	148.016	146.106
Services less trade, transportation, and warehousing.....		ID5	4121	126.267	126.479	127.657	128.119	128.277
Inputs to stage 4 services producers.....		ID5	42	142.391	142.438	144.320	144.455	143.627

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[March 2023, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Nov. 2022	Dec. 2022 ^P	Jan. 2023 ^P	Feb. 2023 ^P	Mar. 2023 ^P
Goods.....		ID5	421	147.228	146.068	148.541	147.841	146.707
Foods.....		ID5	4211	152.439	150.648	150.714	148.373	148.964
Energy.....		ID5	4212	145.258	142.152	148.413	147.178	142.576
Goods excluding foods and energy.....		ID5	4213	146.195	146.249	147.088	147.211	147.567
Services.....		ID5	422	140.503	140.985	142.699	143.112	142.384
Trade services.....		ID5	4223	160.073	158.736	159.355	158.553	158.401
Transportation and warehousing services.....		ID5	4222	148.472	149.493	151.771	151.980	151.319
Transportation of passengers.....		ID5	42221	131.874	136.121	139.462	137.327	139.162
Transportation and warehousing of goods.....		ID5	42222	151.952	152.382	154.493	155.108	154.013
Services less trade, transportation, and warehousing.....		ID5	4221	136.528	137.195	138.951	139.514	138.722
Construction.....		ID5	423	141.280	141.372	142.459	142.761	143.746
Inputs to stage 4 construction producers.....		ID5	43	163.713	161.342	162.479	162.590	161.663
Goods.....		ID5	431	168.135	165.532	166.873	167.226	166.532
Energy.....		ID5	4312	185.399	159.881	170.425	172.130	156.425
Goods excluding foods and energy.....		ID5	4313	170.362	169.935	170.378	170.606	171.380
Services.....		ID5	432	152.408	150.601	151.205	150.722	149.226
Trade services.....		ID5	4323	170.622	167.033	169.365	168.305	165.941
Transportation and warehousing services.....		ID5	4322	158.378	156.692	154.256	152.826	149.273
Transportation of passengers.....		ID5	43221	137.976	142.444	145.954	143.710	145.637
Transportation and warehousing of goods.....		ID5	43222	159.722	157.863	155.274	153.856	150.152
Services less trade, transportation, and warehousing.....		ID5	4321	128.716	128.749	129.094	129.479	129.555
Stage 3 Intermediate Demand								
Stage 3 intermediate demand.....		ID5	3	151.963	148.983	149.306	148.951	147.474
Inputs to stage 3 goods producers.....		ID5	31	164.746	162.576	160.467	159.897	158.954
Goods.....		ID5	311	161.959	159.718	156.512	155.966	155.203
Foods.....		ID5	3111	189.978	189.098	178.873	175.801	173.118
Energy.....		ID5	3112	184.301	153.778	155.660	151.860	147.343
Goods excluding foods and energy.....		ID5	3113	153.040	151.976	151.394	152.086	152.326
Services.....		ID5	312	164.327	162.612	164.866	164.244	162.683
Trade services.....		ID5	3123	168.426	166.043	170.980	170.383	169.096
Transportation and warehousing services.....		ID5	3122	158.652	157.533	155.562	154.336	151.471
Transportation of passengers.....		ID5	31221	140.925	145.496	149.085	146.790	148.762
Transportation and warehousing of goods.....		ID5	31222	159.418	157.971	155.699	154.534	151.404
Services less trade, transportation, and warehousing.....		ID5	3121	130.145	130.024	131.364	131.878	132.138
Inputs to stage 3 services producers.....		ID5	32	141.528	137.896	140.016	139.845	137.987

Total construction inputs to stage 3 intermediate demand.....	04/10	ID5	9313	140.109	140.201	141.279	141.578	142.555
Total foods inputs to stage 3 intermediate demand.....	04/10	ID5	9314	168.881	168.099	159.105	156.373	153.993
Total energy goods inputs to stage 3 intermediate demand.....	04/10	ID5	9315	165.866	137.773	147.337	143.792	135.150
Total goods less foods and energy inputs to stage 3 intermediate demand.....	04/10	ID5	9316	144.373	143.501	143.091	143.636	143.870
Total goods inputs to stage 2 intermediate demand.....	04/10	ID5	9211	129.424	131.445	127.244	121.318	115.058
Total services inputs to stage 2 intermediate demand.....	04/10	ID5	9212	141.848	142.648	143.776	145.587	144.442
Total construction inputs to stage 2 intermediate demand.....	04/10	ID5	9213	140.109	140.201	141.279	141.578	142.555
Total foods inputs to stage 2 intermediate demand.....	04/10	ID5	9214	176.998	175.890	171.577	170.063	164.947
Total energy goods inputs to stage 2 intermediate demand.....	04/10	ID5	9215	107.816	112.127	104.639	94.071	83.085
Total goods less foods and energy inputs to stage 2 intermediate demand.....	04/10	ID5	9216	138.442	137.933	138.345	138.354	138.738
Total goods inputs to stage 1 intermediate demand.....	04/10	ID5	9111	138.421	134.337	135.498	134.751	133.162

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[March 2023, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Nov. 2022	Dec. 2022 ^p	Jan. 2023 ^p	Feb. 2023 ^p	Mar. 2023 ^p
Total services inputs to stage 1 intermediate demand.....	04/10	ID5	9112	143.225	142.652	143.707	143.353	142.998
Total construction inputs to stage 1 intermediate demand.....	04/10	ID5	9117	140.109	140.201	141.279	141.578	142.555
Total foods inputs to stage 1 intermediate demand.....	04/10	ID5	9114	165.403	162.189	161.421	159.170	152.599
Total energy goods inputs to stage 1 intermediate demand.....	04/10	ID5	9115	167.453	148.845	155.128	151.643	144.336
Total goods less foods and energy inputs to stage 1 intermediate demand.....	04/10	ID5	9116	127.632	127.188	127.250	127.285	127.463

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

⁴ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁵ Distributive services include transportation, warehousing, and trade of goods.

⁶ Includes intermediate trade, transportation, and warehousing services.

⁷ Includes crude petroleum.

⁸ Excludes crude petroleum.
