Adjustments to Household Survey Population Estimates in January 2007

reflect updated population controls. As part of its annual review of intercensal population estimates, the U.S. Census Bureau determined that an upward adjustment should be made to the household survey population controls. This adjustment stems from revised estimates of net international migration and updated vital statistics information. The updated controls resulted in an increase of 321,000 in the estimated size of the civilian noninstitutional population 16 years of age and over

for December 2006. Official population and labor force estimates for December 2006 and earlier months will not be revised.

A comparison of December 2006 data based on the old and new controls shows that the population adjustments caused increases in the labor force (+163,000), employment (+153,000), and unemployment (+10,000). The total unemployment rate, labor force participation rate, and employment-population ratio, however, were not affected. (See table below.)

presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.
