Women in the Labor Force: A Databook

ver the past 4 decades, women have made notable changes in their labor force activities. Labor force participation is significantly higher among women today than it was in the 1970s, particularly among women with children, and a larger share of women are working full time and year round. In addition, women have increasingly attained higher levels of education: among women ages 25 to 64 who are in the labor force, the proportion with a college degree roughly tripled from 1970 to 2011. Women's earnings as a proportion of men's earnings also have grown over time. In 1979, women working full time earned 62 percent of what men did; in 2011, women's earnings were 82 percent of men's.

This report presents historical and current labor force and earnings data for women and men from the Current Population Survey (CPS). The CPS is a national monthly survey of approximately 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics. Unless otherwise noted, data are annual averages from the CPS. For a detailed description of the source of the data and an explanation of concepts and definitions used, see the Technical Notes at the end of this report.

Selected demographic characteristics

Women's labor force participation rate peaked at 60.0 percent in 1999, following several decades in which women increasingly entered the labor market. In 2011, 58.1 percent of women were in the labor force, down 0.5 percentage point from 2010. (See tables 1 and 2.)

The overall unemployment rate for women in 2011 was 8.5 percent, compared with 9.4 percent for men. Women's jobless rates varied by race and Hispanic ethnicity. Asian women had the lowest rate (7.3 percent), followed by White (7.5 percent), Hispanic (11.8 percent), and Black (14.1 percent) women. (See tables 1, 2, and 3.)

The labor force participation rate of mothers with children under 18 years of age was 70.9 percent in March 2011, down slightly from 2010. (See tables 6 and 7.) (Data were collected in the 2011 Annual Social and Economic Supplement to the CPS.)

CONTENTS

Highlights
Statistical Tables
Technical Notes99–102

BLS Reports | February 2013 • www.bls.gov 1

In general, mothers with children 6 to 17 years of age are more likely to participate in the labor force (76.5 percent in March 2011) than mothers with children under 6 years of age (64.2 percent). Also, unmarried mothers have higher participation rates than married mothers. In March 2011, 74.9 percent of unmarried mothers with children under 18 years old were in the labor force, compared with 69.1 percent of married mothers. (See tables 6 and 7.) (Data were collected in the 2011 Annual Social and Economic Supplement to the CPS.)

Educational attainment

The educational attainment of women ages 25 to 64 in the labor force has risen substantially over the past 40 years. In 2011, 37 percent of these women held college degrees, compared with 11 percent in 1970. About 7 percent of women had less than a high school diploma (that is, did not graduate high school) in 2011, down from 34 percent in 1970. (See table 9.)

Occupation and industry

In 2011, women accounted for 51 percent of all persons employed in management, professional, and related occupations, somewhat more than their share of total employment (47 percent). The share of women in specific occupations within this large category varied. For example, 14 percent of architects and engineers and 34 percent of physicians and surgeons were women, whereas 61 percent of accountants and auditors and 82 percent of elementary and middle school teachers were women. (See table 11.)

Employed Asian and White women were more likely (44 and 42 percent, respectively) to work in higher paying management, professional, and related occupations in 2011 than were employed Black (34 percent) and Hispanic (25 percent) women. Meanwhile, Hispanic (31 percent) and Black (28 percent) women were more likely than White (20 percent) and Asian (22 percent) women to work in service occupations. (See table 12.)

In 2011, women accounted for at least 50 percent of all workers within several industry sectors: financial activities, education and health services, leisure and hospitality, and other services. However, women were substantially underrepresented (relative to their share of total employment) in agriculture, mining, construction, manufacturing, and in transportation and utilities. (See table 14.)

Earnings

Women who worked full time in wage and salary jobs had median usual weekly earnings of \$684 in 2011. This represented 82 percent of men's median weekly earnings (\$832). Among women, earnings were higher for Asians (\$751) and Whites (\$703) than for Blacks (\$595) and Hispanics (\$518). Women's-to-men's earnings ratios were higher for Blacks and Hispanics (both 91 percent) than for Whites (82 percent) and Asians (77 percent). Users should note that the comparisons of earnings in this report are on a broad level and do not control for many factors that may be significant in explaining earnings differences. (See table 16.)

In 2011, female full-time wage and salary workers ages 25 and older with only a high school diploma had median usual weekly earnings of \$554. This represented 81 percent of the earnings for women with an associate's degree (\$682) and 56 percent of those for women with a bachelor's degree or higher (\$998). (See table 17.)

Hours of work

In 2011, 27 percent of employed women usually worked part time—that is, fewer than 35 hours per week. In comparison, 11 percent of employed men usually worked part time. (See table 20.)

Women employed in nonagricultural industries worked fewer hours per week than men in 2011. On average, women worked 35.6 hours per week, compared with 40.6 hours for men. (See table 21.)

Of all women who worked at some point during calendar year 2010, 59 percent worked full time and year round, compared with 41 percent in 1970. During the same period, the proportion of men who worked full time and year round rose slightly, from 66 to 69 percent. (Data were collected in the 1971 and 2011 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the previous calendar year.) (See table 22.)

Married-couple families

Among married-couple families, 54 percent had earnings from both the wife and the husband in 2010, compared with 44 percent in 1967. Couples in which only the husband worked represented 19 percent of married-couple families in 2010, compared with 36 percent in 1967. (See table 23.) (Data were collected in the 1968 and 2011 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the prior calendar year.)

In 2010, working wives contributed 38 percent of their families' incomes, up about 11 percentage points from 1970, when wives' earnings accounted for 27 percent of their families' total income. The proportion of wives earning more than their husbands also has grown. In 1987, 18 percent of working wives whose husbands also worked earned more than their spouses; in 2010, the proportion was 29 percent. (See tables 24 and 25.) (Data were collected in the 1971, 1988, and 2011 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the prior calendar year.)

Minimum wage and working poor

In 2011, approximately 2.4 million women who were paid at an hourly rate had earnings at or below the prevailing federal minimum wage. This represented 6 percent of all women paid at an hourly rate. Among women 25 years and older who were paid hourly rates, 4 percent had earnings at or below the minimum wage, compared with 16 percent of women ages 16 to 24. (See table 26.)

Among workers who were in the labor force for at least 27 weeks in 2010, about the same number of women (5.2 million) and men (5.3 million) lived below the official poverty level. The working-poor rate (the ratio of the working poor to all individuals in the labor force for at least 27 weeks), however, was higher for women than for men—7.6 percent, compared with 6.7 percent. Black and Hispanic women were significantly more likely than their White or Asian counterparts to be among the working poor. The working-poor rates for Black and Hispanic women were 14.5 percent and 13.8 percent, respectively, compared with 6.6 percent and 5.2 percent, respectively, for White and Asian women. (See table 27.) (Data are

from the 2011 Annual Social and Economic Supplement to the CPS and reflect earnings and work experience in the prior calendar year.)

Worker displacement and tenure

From January 2009 through December 2011, 6.1 million workers ages 20 and older were displaced from jobs they had held for at least 3 years; women accounted for about 44 percent of those displaced. Women were less likely than men to have found a new job at the time of the survey in January 2012: the reemployment rate for women was 50 percent, compared with 61 percent for men. Among displaced workers, the proportion of women who were unemployed at the time of the survey in January 2012 was higher than for men—31 percent, compared with 23 percent. Women were slightly more likely than men to have left the labor force, 20 percent, compared with 16 percent. (See table 28.) (Data are from the January 2012 Displaced Worker Supplement to the CPS.)

In January 2012, the median number of years that female wage and salary workers had been with their employer was 4.6, compared with 4.7 years for their male counterparts. (See table 29.) (Data are from the January 2012 Displaced Worker Supplement to the CPS.)

Other characteristics

Among 2011 high school graduates, young women were more likely than young men to be enrolled in college in October 2011 (72 percent, compared with 65 percent, respectively). (See table 30.) (Data are from the October 2011 School Enrollment Supplement to the CPS.)

In October 2011, 41.8 percent of women ages 16 to 24 who were enrolled in either high school or college were in the labor force. Young men of the same age group who were enrolled in school had a lower labor force participation rate (36.2 percent). Among those not enrolled in school, women were less likely to be in the labor force than men (74.0 percent, compared with 84.8 percent). (See table 31.) (Data are from the October 2011 School Enrollment Supplement to the CPS.)

Young women 16 to 24 years old who were not enrolled in school and who did not have a high school diploma were significantly less likely to participate in the labor force (57.0 percent) in October 2011 than those who had a high school diploma but no additional education (68.4 percent). Among those in the labor force, high school dropouts were more likely to be unemployed (31.2 percent) than were high school graduates (19.0 percent). (See table 31.) (Data are from the October 2011 School Enrollment Supplement to the CPS.)

Multiple jobholders and the self-employed

In 2011, 5.3 percent of employed women held more than one job. The rate for men was lower, at 4.6 percent. Multiple jobholding rates for women and men have edged down in recent years and remain below the rates recorded in the mid-1990s. (See table 32.)

In 2011, 5.1 percent of working women in nonagricultural industries were self-employed, compared with 7.1 percent for their male counterparts. In 2011, 39 percent of all self-employed persons were women, compared with 27 percent in 1976. (See table 33.)

Foreign born

In 2011, foreign-born women were somewhat less likely than native-born women to be in the labor force (54.6 percent, compared with 58.7 percent). Of those in the labor force, foreign-born women were more likely to be unemployed than their native-born counterparts (9.5 percent, compared with 8.3 percent). Foreign-born men were more likely to be in the labor force (79.5 percent) than

native-born men (68.8 percent) and were somewhat less likely to be unemployed (8.8 percent, compared with 9.5 percent). (See table 34.)

Union membership

In 2011, 11.2 percent of female wage and salary workers were members of unions, compared with 12.4 percent of their male counterparts. For both men and women, the union membership rate in 2011 was lower than in 1983, but the rate has fallen much more for men over the 1983–2011 period—12.3 percentage points, compared with 3.4 points for women. (See table 35.)

Veterans

In 2011, there were 11.3 million veterans of the U.S. Armed Forces in the labor force. Ten percent of these veterans were women. Among female veterans in the labor force, a little more than half (56 percent) served in the Gulf War-era I and II service periods (August 1990 to present). (See table 36.)

Women with disabilities

Of the 14.7 million women with disabilities in 2011, 2.6 million, or 17.4 percent, were in the labor force. Nearly half of women with disabilities were age 65 and older; labor force participation among them was 4.8 percent, compared with 29.6 percent among those ages 16 to 64. (See table 37.)

¹The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the historical comparability section of the household data technical documentation provided at http://www.bls.gov/cps/eetech_methods.pdf

Table 3. Employment status by race, age, sex, and Hispanic or Latino ethnicity, 2011 annual averages (Numbers in thousands)

NOTE: Children are "own" children and include sons, daughters, stepchildren, and adopted children. Not included are nieces, nephews, grandchildren, and other related and unrelated children. Data for 1994 and subsequent years are not directly comparable with data for 1993 and earlier years because of the introduction of a major redesign of the Current Population Survey.

¹ Data from 1970-1991 are from the March Current Population Survey. The educational attainment categories for these years were based on the number of years of school completed.

SOURCE: Current Population Survey, U.S. Bureau of Labor Statistics

² Data beginning in 1992 are annual averages, and the educational attainment categories are based on the highest diploma or degree received.

NOTE: Effective with the January 2011 data, occupations reflect the introduction of the 2010 Census occupational classification system into the Current Population Survey. This classification system is derived from the 2010 Standard Occupational Classification (SOC). Data for 2011 are not strictly comparable with earlier years.

Laundry and dry—cleaning workers		60.
Pressers, textile, garment, and related materials.		-
Sewing machine operators.		78.
Shoe and leather workers and repairers.		-
Shoe machine operators and tenders.		
Tailors, dressmakers, and sewers.		74.
Textile bleaching and dyeing machine operators and tenders.		, ,
Textile cutting machine setters, operators, and tenders		_
Textile knitting and weaving machine setters, operators, and tenders		
Textile winding, twisting, and drawing out machine setters, operators, and tenders		_
Extruding and forming machine setters, operators, and tenders, synthetic and glass fibers		
Fabric and apparel patternmakers		
Upholsterers.		
Textile, apparel, and furnishings workers, all other.		
		2.
Cabinetmakers and bench carpenters		2.
		_
Model makers and patternmakers, wood.		_
Sawing machine setters, operators, and tenders, wood		_
Woodworking machine setters, operators, and tenders, except sawing		_
Woodworkers, all other	21	
Power plant operators, distributors, and dispatchers.		1.
Stationary engineers and boiler operators	95	2

Table 11. Employed persons by detailed occupation and sex, 2011 annual averages—Cont'd (Numbers in thousands)

Occupation	Total employed	Percer wome
Water and wastewater treatment plant and system operators	71	5.2
Miscellaneous plant and system operators		_
Chemical processing machine setters, operators, and tenders		16.4
Crushing, grinding, polishing, mixing, and blending workers		13.5
Cutting workers		22.5
Extruding, forming, pressing, and compacting machine setters, operators, and tenders		
Furnace, kiln, oven, drier, and kettle operators and tenders		_
Inspectors, testers, sorters, samplers, and weighers		34.9
Jewelers and precious stone and metal workers.		_
Medical, dental, and ophthalmic laboratory technicians		53.1
Packaging and filling machine operators and tenders		50.6
Painting workers.		13.4
Photographic process workers and processing machine operators		_
Semiconductor processors.		_
Adhesive bonding machine operators and tenders.		_
Cleaning, washing, and metal pickling equipment operators and tenders		_
Cooling and freezing equipment operators and tenders		_
Etchers and engravers.		
Molders, shapers, and casters, except metal and plastic.		_
Paper goods machine setters, operators, and tenders.		
Tire builders		_
Helpers—production workers.		25.6
Production workers, all other.		26.2
ransportation and material moving occupations.		14.9
Supervisors of transportation and material moving workers		22.
	_	4.3
Air traffic controllers and airfield operations specialists		4.
		77
Flight attendants.		77.4
Ambulance drivers and attendants, except emergency medical technicians		42
Bus drivers.		43.4
Driver/sales workers and truck drivers	,	4.8
Taxi drivers and chauffeurs		12.
Motor vehicle operators, all other.		5.0
Locomotive engineers and operators.	45	_
Railroad brake, signal, and switch operators.		_
Railroad conductors and yardmasters		6.0
Subway, streetcar, and other rail transportation workers		_
Sailors and marine oilers		_
Ship and boat captains and operators		_
Ship engineers		_
Bridge and lock tenders		_
Parking lot attendants		13.2
Automotive and watercraft service attendants	76	10.0
Transportation inspectors	32	_
Transportation attendants, except flight attendants	32	_
Other transportation workers		_
Conveyor operators and tenders	5	_
Crane and tower operators	63	
Dredge, excavating, and loading machine operators	51	
Hoist and winch operators	4	_
Industrial truck and tractor operators	528	6.7
Cleaners of vehicles and equipment	331	12.0

¹ The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the historical comparability documentation provided at http://www.bls.gov/cps/eetech_methods.pdf.

NOTE: Beginning in 2003, estimates for the above race groups (White, Black or African American, and Asian) include people who selected this race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Data for 2000–02 are for the category Asians and Pacific Islanders. Starting in 2003, Asians constitute a separate category. For more information, see the historical comparability documentation. Data for Asians were not tabulated prior to 2000. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

¹ Data not shown where the employment base is less than 50,000.

NOTE: Effective with the January 2011 data, occupations reflect the introduction of the 2010 Census occupational classification system into the Current Population Survey. This classification system is derived from the 2010 Standard Occupational Classification (SOC). Data for 2011 are not strictly comparable with earlier years. Dash indicates data not available.

² Data not shown where the employment base for either the numerator or denominator is less than 50,000.

¹ Prior to 1994, total includes persons who usually work part time but who worked 35 or more hours during the reference week; for 1994 and later years, such persons were included in the part-time total. In all years, the total includes those who usually work full time but who worked less than 35 hours during the reference week for noneconomic reasons, such as illness or holiday, and those absent from work for the entire reference week who usually work full time. These groups are not shown separately.

² For all years, total includes those who usually work less than 35 hours a week but who were absent from work for the entire reference week and for 1994 and later years, those who worked 35 or more hours during the reference week. These groups are not shown separately.

³ The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the historical comparability documentation provided at http://www.bls.gov/cps/eetech_methods.pdf.

This table was reissued on March 26, 2013, to correct errors in the data.

Table 26. Wage and salary workers paid hourly rates with earnings at or below the prevailing federal minimum wage by selected characteristics, 2011 annual averages—Cont'd (Numbers in thousands)

		Worl	cers paid hourly	rates			
		Total at or below prevailing federal minimum wage					
Characteristic	Total	Total	Percent of hourly paid workers	At prevailing federal minimum wage	Below prevailing federal minimum wage		
Full- and part-time status ¹							
Full-time workers	53,594	1,274	2.4	522	752		
Women	24,302	773	3.2	317	456		
Men	29,292	501	1.7	205	296		
Part-time workers	20,199	2,545	12.6	1,153	1,392		
Women	13,096	1,615	12.3	711	904		
Men	7,103	932	13.1	443	489		

¹ Full time refers to persons who usually work 35 hours or more per week; part time refers to persons who usually work fewer than 35 hours per week. Data will not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple jobholders.

NOTE: The prevailing federal minimum wage was \$7.25 an hour in 2011. Data are for wage and salary workers, excluding the incorporated self-employed. They refer to a person's earnings on his or her sole or principal job, and pertain only to workers who are paid hourly rates. Salaried workers and other nonhourly workers are not included. Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

¹ Number below the poverty level as a percent of the total in the labor force for 27 weeks or more.

NOTE: These data, collected in the 2011 Annual Social and Economic Supplement, reflect the earnings and work experience of the entire year. Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash represents or rounds to zero.

¹ The native born are people who were born in the United States or one of its outlying areas, such as Puerto Rico or Guam, or who were born abroad of at least one parent who was a U.S. citizen.

² The foreign born are those residing in the United States who were not U.S. citizens at birth. That is, they were born outside the United States or one of its outlying areas, such as Puerto Rico or Guam, to parents who were not U.S. citizens. This group includes legally admitted immigrants, refugees, students, temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the number of people in these categories.

¹ Data refer to members of a labor union or an employee association similar to a union.

NOTE: Data refer to the sole or principal job of full- and part-time workers. All self-employed workers are excluded, regardless of whether their businesses are incorporated.

² Data refer to workers who are not members of unions but whose jobs are covered by a union or employee association contract, as well as to members of a labor union or an employee association similar to a union.

³ Not strictly comparable with data for prior years. For an explanation, see the historical comparability documentation provided at http://www.bls.gov/cps/eetech_methods.pdf.

Unemployment rate	8.7	8.2	9.3	
Not in labor force	68,854	47,689	21,166	69.3

NOTE: Veterans served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans who served in more than one wartime period are classified only in the most recent one. Veterans who served during one of the selected wartime periods and another period are classified only in the wartime period.

NOTE: A person with a disability has at least one of the following conditions: deaf or serious difficulty hearing; blind or serious difficulty seeing even when wearing glasses; serious difficulty concentrating, remembering, or making decisions because of a physical, mental, or emotional condition; serious difficulty walking or climbing stairs; difficulty dressing or bathing; or difficulty doing errands alone such as visiting a doctor's office or shopping because of a physical, mental, or emotional condition.

Technical Notes

The estimates in this report were obtained from the Current Population Survey (CPS), a national monthly sample survey of approximately 60,000 eligible households that provides a wide range of information on the labor force, employment, and unemployment. The survey is conducted for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau, using a scientifically selected national sample with coverage in all 50 states and the District of Columbia.

Material in this report is in the public domain and, with appropriate credit, may be reproduced without permission. This information is available to sensory-impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Concepts and definitions

Civilian noninstitutional population. Included are persons 16 years of age and older residing in the 50 States and the District of Columbia who are not confined to institutions (for example, correctional facilities, residential nursing, and mental health care facilities) and who are not on active duty in the Armed Forces.

Civilian labor force. This group comprises all persons classified as employed or unemployed.

Civilian labor force participation rate. This rate is the civilian labor force as a percent of the civilian noninstitutional population.

Employed persons. All persons who, during the survey reference week, (a) did any work at all (at least 1 hour) as paid employees; worked in their own business, profession, or on their own farm; or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family; and (b) all those who were not working but who had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management disputes, job training, or other family or personal reasons,

whether or not they were paid for the time off or were seeking other jobs.

Employment-population ratio. This ratio represents the proportion of the population that is employed.

Unemployed persons. All persons who had no employment during the survey reference week, were available for work (except for temporary illness), and had made specific efforts to find employment sometime during the 4-week period ending with the survey reference week. Persons who were waiting to be recalled to a job from which they had been laid off did not need to be looking for work to be classified as unemployed.

Unemployment rate. This rate represents the number of unemployed persons as a percent of the civilian labor force.

Not in the labor force. Included in this group are all persons in the civilian noninstitutional population who are neither employed nor unemployed. Persons marginally attached to the labor force are those individuals not in the labor force who wanted and were available for work and had looked for a job sometime in the prior 12 months (or since the end of their last job if they held one within the past 12 months). They were not counted as unemployed because they had not searched for work in the 4 weeks preceding the survey. Discouraged workers, a subset of the marginally attached, were not looking for work because they believed no jobs were available for them.

Race. In accordance with the Office of Management and Budget guidelines, White, Black or African American, and Asian are terms used to describe a person's race. Beginning in 2003, persons in these categories are those who selected that race group only. Those who identify multiple race groups are categorized as persons of two or more races. (Previously, persons identified a group as their main race.) In the enumeration process, race is determined by the household respondent. More information on the 2003 changes to questions on race and Hispanic ethnicity is available at http://www.bls.gov/cps/rvcps03.pdf.

Hispanic or Latino ethnicity. This refers to persons who identified themselves in the enumeration process as being

Spanish, Hispanic, or Latino. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. More information on the 2003 changes in questions on race and Hispanic ethnicity is available at http://www.bls.gov/cps/rvcps03.pdf.

Family. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption; all such persons are considered as members of one family. Families are classified either as married-couple families or as families maintained by women or men without spouses present. Families include those without children as well as those with children under 18 in the home.

Children. Data on children refer to one's own children and include sons, daughters, stepchildren, and adopted children. Not included are nieces, nephews, grandchildren, other related children, and all unrelated children living in the household.

Self-employed workers. Self-employed workers are those who work for profit or fees in their own business, profession, trade, or farm. Unincorporated self-employed workers are included in the self-employed category. Self-employed persons whose businesses are incorporated are included with wage and salary workers.

Wage and salary workers. These are workers who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in both the private and public sectors. Data on union membership and earnings of wage and salary workers exclude all self-employed workers, both those with incorporated businesses and those with unincorporated businesses.

Workers paid by the hour. Persons paid at an hourly rate on their main job. Historically, workers paid an hourly wage have made up approximately three-fifths of all wage and salary workers.

Usual weekly earnings. Data represent earnings before taxes and other deductions, and include any overtime pay, commissions, or tips usually received (at the main job, in the case of multiple jobholders). Earnings reported on a basis other than weekly (for example, annual, monthly, or

hourly) are converted to weekly. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months. Data refer to the sole or primary job of wage and salary workers (excluding all self-employed persons regardless of whether their businesses were incorporated). The data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers.

Median earnings. These figures indicate the value that divides the earnings distribution into two equal parts, one part having values above the median and the other having values below the median. The medians shown in this publication are calculated by linear interpolation of the \$50-centered interval within which each median falls.

Hours at work. These are the actual hours worked (at all jobs) during the survey reference week. For example, persons who normally work 40 hours a week but were off during the Columbus Day holiday would be reported as working 32 hours, even if they were paid for the holiday.

Usual hours, or usual full- or part-time status. Data on persons "at work" exclude persons who were temporarily absent from a job and therefore classified in the zero-hours worked category, "with a job but not at work." These are persons who were absent from their jobs for the entire week for reasons such as bad weather, vacation, illness, or involvement in a labor dispute. To differentiate a person's normal schedule from his or her activity during the survey reference week, persons also are classified according to their usual full- or part-time status. In this context, full-time workers are those who usually work 35 hours or more (at all jobs combined) per week. This group includes some individuals who worked less than 35 hours in the reference week for either economic or noneconomic reasons and those who were temporarily absent from work. Similarly, part-time workers are those who usually work less than 35 hours per week (at all jobs), regardless of the number of hours worked in the reference week. This may include some individuals who actually worked more than 34 hours in the reference week, as well as those who were temporarily absent from work.

Occupation and industry. This information applies to the job held during the reference week. Persons with two or more jobs are classified in the occupation and industry at which they worked the greatest number of hours. CPS data use the Census occupational classification, based on the 2010 Standard Occupation Classification (SOC), and the Census industry classification, derived from the 2007 North American Industry Classification System (NAICS). Additional information about these classifications is available online at http://www.bls.gov/cps/cpsoccind.htm.

Work experience. These data reflect work activity during the calendar year and are obtained from the Annual Social and Economic Supplement (ASEC) to the CPS. Estimates of persons who worked were based on "yes" responses to the following questions in the ASEC: "Did you work at a job or business at any time during [the survey reference year]?" or "Did you do any temporary, part-time, or seasonal work even for a few days during [the survey reference year]?" Since the reference period is a full year, the number of persons with some employment or unemployment greatly exceeds the average levels for any given month, which are based on a 1-week reference period, and the corresponding annual averages of monthly estimates.

Workers paid at or below the Federal minimum wage. The estimates of the numbers of workers with reported earnings at or below the federal minimum wage pertain only to workers who are paid hourly rates. Salaried workers and other workers who are not paid by the hour are not included, even though some have earnings that, if converted to hourly rates, would be at or below the minimum wage. Research has shown, however, that the degree of understatement is small. BLS does not routinely estimate the hourly earnings of workers not paid by the hour because of data quality concerns associated with such an estimation process.

The presence of workers with hourly earnings below the minimum wage does not necessarily indicate violations of the Fair Labor Standards Act (FLSA), because there are a number of exemptions to the minimum-wage provisions of the law. In addition, some workers might have rounded

their hourly earnings in response to survey questions. As a result, some might have reported hourly earnings below the minimum wage when, in fact, they earned the minimum wage or higher.

Poverty classification. Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by Federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families based on factors such as family size and the number of children under 18 years of age. The actual poverty thresholds vary in accordance with the makeup of the family. Poverty thresholds are updated each year to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). The thresholds do not vary geographically. For more information on poverty data and thresholds, see http://www.census.gov/hhes/www/poverty/poverty.html.

Displaced workers. Displaced workers are wage and salary workers 20 years of age and older who lost or left jobs because their plant or company closed or moved, there was insufficient work for them to do, or their position or shift was abolished. Data are often presented for long-tenured displaced workers—those who had worked for their employer for 3 or more years at the time of displacement. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses. Data are collected through a supplement to the January Current Population Survey (CPS).

Employee tenure. This is a measure of how long wage and salary workers had been with their current employer at the time of the survey. Tenure is presented in median years; the median is the point at which half of all workers had more tenure and half had less tenure. Data refer to the sole or principal job of full- and part-time workers. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses. The data are collected through a supplement to the January Current Population Survey (CPS).

Foreign born. The foreign born are persons residing in the United States who were not U.S. citizens at birth. That is, they were born outside the United States or one of its outlying areas such as Puerto Rico or Guam, to parents neither of whom was a U.S. citizen. The foreign-born population includes legally-admitted immigrants, refugees, temporary residents such as students and temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the number of persons in these categories. The native born are persons born in the United States or one of its outlying areas such as Puerto Rico or Guam or who were born abroad of at least one parent who was a U.S. citizen.

Union membership. Union membership refers to members of a labor union or an employee association similar to a union. The data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses.

Veterans. Veterans are men and women 18 years or older who previously served on active duty in the U.S. Armed Forces and who were civilians at the time they were surveyed. Members of the Reserve and National Guard are counted as veterans if they had ever been called to active duty. Persons who are on active duty at the time of the survey are outside the scope of the survey and thus not in the estimates shown here, as are persons who reside in institutions, such as nursing homes and prisons. Nonveterans are men and women who never served on active duty in the U.S. Armed Forces. Veteran status is obtained from responses to the question, "Did you ever serve on active duty in the U.S. Armed Forces?"

Disability. The CPS uses a set of six questions to identify persons with disabilities. The questions inquire about

physical, mental, or emotional conditions that cause serious difficulty with daily activities. Persons are classified as having a disability if there is a response of "yes" to any of these questions. Each of the questions ask the respondent whether anyone in the household has the condition described, and if the respondent replies "yes," they are then asked to identify everyone in the household who has the condition. More information, including the wording of the six questions used to identify persons with a disability, is available at http://www.bls.gov/cps/demographics.htm#disability.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than an entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

All other types of error are referred to as nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of data.

More information on the reliability of data from the CPS and estimating standard errors is available at http://www.bls.gov/cps/documentation.htm#reliability.
