

# Extended Mass Layoffs in 2005

U.S. Department of Labor  
U.S. Bureau of Labor Statistics  
September 2006

Report 997

## Introduction

The Bureau of Labor Statistics (BLS) conducts the Mass Layoff Statistics (MLS) program to provide information on large-scale private nonfarm layoff events and on the characteristics of dislocated workers. Each month, BLS reports on the number of mass layoff events by employers, and each quarter there is a separate report on the number and characteristics of those private nonfarm mass layoffs that last more than 30 days. This report summarizes and analyzes the quarterly data for 2005. It provides information on the industry, geographic distribution, and size of private nonfarm mass layoffs; the demographic characteristics of those claiming unemployment insurance; the duration of certified unemployment; the expectation of recall; the extent of permanent worksite closures; the reason for the layoff; and the movement-of-work actions taken by employers.

Extended mass layoffs, as defined in the MLS program, are layoffs of at least 31 days' duration that involve the filing of initial claims for unemployment insurance by 50 or more individuals from a single establishment during a consecutive 5-week period. Since 2004, the detailed mass layoff reports no longer cover government and agricultural layoffs.

In 2005, employers laid off 884,356 workers in 4,881 private nonfarm extended mass layoff events. Layoff activity decreased from the previous year, with the number of separations reaching its lowest level since the program resumed in 1996. (See table 1.) Twenty-nine States reported over-the-year declines in the number of workers laid off, with 13 of those States reaching series lows in 2005. The single largest contributor to layoffs was the ending of seasonal work, accounting for 40 percent of all private nonfarm worker separations. Between 34,194 and 53,628 workers lost their jobs in extended mass layoffs because their employers moved work to other U.S. locations or to locations outside of the U.S., either within the same company or to other companies. Layoff activity involving permanent worksite closures accounted for 11 percent of all layoff events and affected 107,325 workers in 2005, the lowest level ever recorded in the program.

In 2005, the national unemployment rate was 5.1 percent; a year earlier it was 5.5 percent. Private nonfarm payroll employment increased by 1.7 percent or about 1.8 million jobs from 2004 to 2005.

This report uses the new metropolitan area definitions as defined by the Office of Management and Budget in Bulletin 06-01. Additional information about the program is provided in the technical note that follows the tables and on the program's website.

## Highlights

### Industry distribution of 2005 mass layoffs

- Manufacturing establishments accounted for 26 percent of layoff events and 25 percent of separations in 2005, down slightly from 29 percent of events and 26 percent of separations in 2004. The percentages in 2005 were the lowest recorded for this sector since annual data became available in 1996. Food manufacturing (mostly fruit and vegetable canning and freezing) and transportation equipment (largely in automobiles) firms accounted for 42 percent of the separations in manufacturing in 2005. When compared with 2004, food manufacturing registered the largest decrease (13,233) in manufacturing separations. (See tables 2 and 3.)

- Construction (mainly heavy and civil engineering and specialty trade contractors) accounted for 20 percent of private nonfarm mass layoff events and 14 percent of separations. The number of laid-off construction workers, 122,389, in 2005, was slightly higher than last year. (See table 2.) Eighty-six percent of all construction layoffs were due to the ending of seasonal work and the completion of contracts. Employers expected a recall in 80 percent of the construction layoff events.

- Administrative and waste services accounted for 10 percent of all private nonfarm layoff events and 11 percent of all separations, largely reflecting the completion of contracts in temporary help agencies and professional employer organizations. (See table 2.) Both the number of events (505) and separations (93,554) reached their lowest levels in administration and waste services since 2000.

- Manufacturers and distributors of clothing reported laying off 33,657 workers, the lowest level ever recorded in the program. (See table 2.) The ending of seasonal work accounted for the largest number of separations in this industry group. The South registered the highest number of laid-off workers (12,197), followed by the Midwest (10,747).

- Employers involved in food processing and distribution, excluding agriculture, accounted for 13 percent of all private nonfarm separations, representing 121,537 workers. The number of such laid-off workers decreased by 33 percent, and compares with a program-high of 180,333 workers in 2004. (See tables 2 and 3.)

- Of the major sectors, retail trade recorded the largest decrease (64,138) in worker separations between 2004 and 2005, followed by manufacturing (31,372) and administrative and waste services (19,811). Among those sectors showing gains over the year arts, entertainment, and recreation had the largest increase (14,371) in the number of separated workers. This was due, in part, to the affects of Hurricane Katrina. (See table 3.) In 2005, manufacturing, finance and insurance, wholesale trade, and mining industries reached their lowest annual totals in terms of separated workers. Arts, entertainment, and recreation and educational services establishments reached program highs.

- Of the four information technology-producing industries (computer hardware, software and computer services, communications equipment, and communications services), firms involved in computer hardware had the largest number of laid-off workers (11,928) in 2005. Layoffs in communications services reported the largest decrease (9,541) from a year ago and reached its lowest level of separations since 2000. (See table 4.)

- Among the 88 three-digit NAICS-coded industry groups in the private nonfarm economy identified in the MLS program, 47 posted decreases in the number of separated workers during 2005. Decreases were registered by food and beverage stores (the largest decrease at 47,759 workers), followed by administrative and support services (20,957) and general merchandise stores (17,503). Thirty-five industries registered increases, led by amusements, gambling, and recreation (12,734) and air transportation (10,176).

- Among the three-digit NAICS industries experiencing increases in worker separations, amusements, gambling, and recreation and social assistance moved into the top 10 in terms of worker separations. These industries replaced general merchandise stores and food and beverage stores on that list. (See table 5.)

- Among the six-digit NAICS industries registering increases in worker separations, tax preparation services, mail-order houses, and child day care services moved into the top 10 in terms of separations. Exiting the top ten on the list were supermarkets and other grocery stores, fruit and vegetable canning, and department stores, except discount. (See table 6.)

## **Reason for layoff**

- Employers citing the end of seasonal work as the reason for layoff accounted for 37 percent of layoff events and 40 percent of separations (355,831 workers), the highest annual shares in the program. (See table 7.) Compared with 2004, the number of workers laid off because seasonal work ended increased by 6 percent, while the number of workers in total private nonfarm layoffs decreased (11 percent). Three industries accounted for 31 percent of workers separated because seasonal work ended: Heavy and civil engineering construction, amusements, gambling, and recreation, and food manufacturing.

- Both the number of events (773) and separations (149,419) due to internal company restructuring reached their lowest levels in the program. (See table 7.) These layoffs occurred largely in transportation equipment, food manufacturing, credit intermediation and related services, air transportation, and food and beverage stores. Employers in California reported the largest number of workers laid off due to restructuring, followed by Illinois, Florida, New York, and New Jersey.

- In 2005, the number of workers separated due to the completion of a contract (115,988) reached its lowest level since 2000. (See table 7.) The largest number of separations due to contract completion occurred in administrative and support services (temporary help services and professional employer organizations), followed by specialty trade contractors.

- Layoffs due to a nonseasonal lack of demand for products and services (slack work) decreased for the fourth straight year, reaching its lowest level in the program. (See tables 7 and 8.) Transportation equipment recorded the largest number of separations (13,599) due to slack work.

- The largest declines in layoffs, by reason for layoff, were in contract completed (54,204), reorganization within the company (26,054), labor dispute (20,646), and financial difficulty (18,158). Layoffs due to inclement weather, almost exclusively due to the effects of Hurricanes Katrina and Rita, showed the largest increase (53,629) in worker separations, followed by those due to the ending of seasonal work (21,442). (See tables 7 and 8.)

- The impacts of Hurricanes Katrina and Rita were first seen in the MLS program through initial claims filings against establishments in the most severely affected states—Louisiana and Mississippi. Total potential events in the period from August 28 through December 31, 2005, reached 964, with 136,930 initial claims filed. Private nonfarm extended mass layoffs directly or indirectly due to Hurricanes Katrina and Rita totaled 358 events and 57,551 separations in the period. The majority of the extended mass layoff

activity occurred in September, and all of the events were from Louisiana and Mississippi employers. Accommodation and food service establishments reported the highest number of worker separations due to the hurricanes, followed by retail trade and healthcare and social assistance. (In response to the interview, many employers identified as having potential layoff events responded that the layoff was temporary [less than 31 days] or did not occur at all.)

- Illinois accounted for the largest number of separations due to the ending of seasonal work, followed by New York, Ohio, California, Wisconsin, Colorado, and New Jersey. Florida and Illinois accounted for the highest number of separations in layoffs due to the completion of contracts. Illinois and California registered the largest number of separations due to company reorganizations. (See table 9.)

### **Movement of work**

- There were 277 extended mass layoff events in 2005 involving movement of work. This was about 9 percent of all nonseasonal and non-vacation period layoff events and resulted in the separation of 53,628 workers. Compared with 2004, both the number of events and separations that reported movement of work dropped by about 25 percent. (See tables 10 and 14.)

- Among the 277 layoff events with reported relocation of work, 55 percent involved the permanent closure of worksites, affecting 27,716 workers. In sharp contrast, only 15 percent of nonseasonal/nonvacation period layoffs where there was no movement of work resulted in a closure.

- Manufacturing industries accounted for 64 percent of the events and 60 percent of separations in which work moved, largely in transportation equipment, computer and electronic products, and food manufacturing. In contrast, manufacturing accounted for only 29 percent of events and separations in nonseasonal/non-vacation period layoffs with no movement of work. (See table 10.)

- Internal company restructuring (mostly reorganization within the company) accounted for 70 percent of events and separations associated with the movement of work. In contrast, 21 percent of events and 24 percent of separations were due to internal company restructuring in nonseasonal/nonvacation period layoffs with no movement of work. (See table 11.)

- The Midwest led all regions in terms of separations (16,612) where there was some movement of work, followed closely by the South (15,999). (See table 12.) The Midwest, South, and West regions all experienced large over-the-year declines (33, 31, and 27 percent, respectively) in the number of laid-off workers in events experiencing some movement of work. The Northeast region, which recorded the lowest

number of separations associated with movement of work, remained about the same as last year.

- Benefit exhaustion rates were higher for claimants in layoffs involving the movement of work than in layoffs in which the employer responded work did not move. In movement-of-work events, the older the claimant, the more likely they were to exhaust benefits. In events where work did not move, benefit exhaustion rates were similar for claimants of all ages, with the exception of the oldest age category (55 years of age or older). (See table 13.)

- In the 277 layoff events involving movement of work, 363 relocations of work were identified. (Movement of work can involve more than one relocation.) Of these relocations, employers were able to provide information on the separations associated with the movement of work component of the layoff in 259 actions, or 71 percent of the total actions for 2005. Thus, a range of 34,194 (separations in movement of work actions where the employer was able to provide specific detail) to 53,628 (total separations in all layoff events that included movement of work) is established for separations due to the movement of work in 2005. (See table 14.)

- Of the 259 relocations of work with separations reported, domestic relocations of work accounted for 63 percent of the actions and resulted in the separation of 21,470 workers. Eighty percent of the domestic actions and associated separations were the result of moving work within the same company. Employers cited California more than any other State as the location to which work was moving, followed by Georgia, Texas, and Tennessee. (See table 15.)

- Out-of-country relocations accounted for 35 percent of the movement-of-work actions among the 259 relocations of work with separations reported and resulted in 12,030 laid-off workers. Seventy-five percent of the out-of-country actions and 78 percent of separations were due to within-company relocations. (See table 15.) Mexico and China were cited 68 percent of the time as the destination to which work was moving.

### **Size of layoff**

- Layoff events in 2005 continued to be concentrated among the smaller sized layoffs, with 63 percent involving fewer than 150 workers. This figure has remained fairly consistent since 1996, ranging from 59 to 63 percent annually. These layoff events, however, accounted for only 31 percent of all separations, slightly higher than in 2004 (27 percent). The 263 layoff events involving 500 or more workers accounted for 28 percent of all separations. (See table 16.)

- The average number of separations per layoff event in 2005 was 181, the lowest on record. Among private sector establishments, arts, entertainment, and recreation reported

the largest average layoff size per layoff event, 386 workers, followed by professional and technical services (268 workers) and educational services (238 workers). Establishments with the smallest average layoff size were those in construction (127 workers) and in wholesale trade (131 workers). (See table 17.)

- Employers citing model changeover as the reason for layoff had the highest average layoff size per layoff event (362 workers), followed by those reporting labor dispute (344 workers), energy-related (246 workers), and bankruptcy (238 workers). Layoffs due to a slack work and plant or machine repair averaged the fewest separations per layoff event (131 and 133 workers, respectively). (See table 17.)

- Employers reporting the worksite as permanently closed averaged 192 separations per layoff event, the smallest on record. (See table 17.)

### Initial claimants

- There were 833,000 initial claimants for unemployment insurance associated with extended mass layoff events in 2005. Of these, 43 percent were women, 17 percent were black, 13 percent were Hispanic, and 18 percent were 55 years of age or older. Thirty-six percent of claimants were between the ages of 30 and 44. (See tables 18 and 20.) Of the total civilian labor force in 2005, 46 percent were women, 11 percent were black, 13 percent were Hispanic, and 16 percent were 55 years of age or older. Thirty-five percent of the civilian labor force was between the ages of 30 and 44.

- The percentage of claimants who were white remained unchanged from 2004 at 59 percent. Persons of Hispanic origin accounted for 13 percent of the claimants involved in extended mass layoff events. The percentage of Hispanic claimants was highest in administrative and waste services (21 percent), followed by health care and social services (19 percent) and wholesale trade (18 percent). (See table 19.)

- The proportion of Black claimants increased to 17 percent from 15 percent in 2004. Establishments providing educational services reported the highest percentage of black claimants (39 percent), followed by healthcare and social assistance (32 percent). With respect to the reason for layoff, high percentages of black claimants were associated with layoffs due to issues related to the environment and inclement weather. (See table 19.)

- Eighteen percent of all claimants were aged 55 and over in 2005, up slightly from 17 percent in 2004. The proportions of these older claimants were highest in professional and technical services, arts, entertainment, and recreation, and in transportation and warehousing. Claimants between the ages of 30 and 44 accounted for 36 percent of

all claimants from extended mass layoffs. The proportion of these claimants in this age group was highest among management of companies and enterprises, information, and construction establishments. (See table 20.)

### Duration of insured unemployment

- North Carolina had the longest duration of insured unemployment associated with extended mass layoff events (as measured by the average number of continued claims for unemployment insurance following the initial claim), followed by Tennessee and West Virginia. Claimants experiencing the shortest jobless duration (as measured by the average number of continued claims) were separated from employers located in Kentucky, Nebraska, Hawaii, and Alaska. (See table 21.)

- Georgia reported the largest proportion of claimants exhausting unemployment insurance benefits (32 percent), followed by Wyoming (29 percent), Louisiana (28 percent), and North Carolina (28 percent). States registering the lowest percentages of exhaustees were Mississippi, Alaska, Nebraska, South Dakota, and Delaware. (See table 21.)

- The longest average jobless duration (based on the average number of continued claims) was experienced by claimants laid off from finance and insurance companies. Claimants laid off from real estate and rental and leasing had the shortest spells of jobless duration, followed closely by mining, construction, and manufacturing. (See table 22.)

- Benefit exhaustion rates were highest among workers in finance and insurance and in professional and technical services, while workers laid off in mining and in construction had the lowest rates. (See table 22.)

- Claimants laid off due to natural disasters and business ownership change had the longest jobless duration. The shortest duration occurred in layoffs due to environmental concerns and to the nonseasonal lack of demand for products and services (slack work). (See table 22.)

- Benefit exhaustion rates were high for claimants involved in worksite closures. Claimants in layoffs from which employers did not expect a recall had higher benefit exhaustion rates compared with workers in events from which a recall was expected. (See table 22.)

- Among the 50 largest metropolitan statistical areas in terms of the level of initial claims in extended mass layoff events, claimants laid off from establishments in Charlotte-Gastonia-Concord, NC-SC led the list of those with the longest jobless duration, followed by Tampa-St. Petersburg-Clearwater, FL, San Francisco-Oakland-Fremont, CA, Seattle-Tacoma-Bellevue, WA, and San Diego-Carlsbad-San Marcos, CA. Claimants in Allentown-Bethlehem-Easton, PA-

NJ and Scranton-Wilkes-Barre, PA had the shortest duration of unemployment. Benefit exhaustion rates were highest in Miami-Fort Lauderdale-Miami Beach, FL, New Orleans-Metairie-Kenner, LA, Tampa-St. Petersburg-Clearwater, FL, and Atlanta-Sandy Springs-Marietta, GA. (See table 23.)

- Claimants aged 55 years or older were more likely to exhaust benefits than the other age groups. Women had higher exhaustion rates than men did. Black claimants had higher benefit exhaustion rates than any other race or ethnic category. (See table 24.)

### **Geographic distribution**

- In 2005, for the second consecutive year, employers in the Midwest reported the highest number of separations, largely due to layoffs in manufacturing and in construction. (See table 25.) The Northeast continued to have the lowest numbers of events and separations. Excluding the impact of seasonal layoffs, the South (195,660) and Midwest (151,968) had the highest levels of separated workers in extended mass layoff events.

- Compared to 2004, decreases in the number of separations occurred in three of the four regions, with the West reporting the largest decrease (114,353), mostly due to fewer layoffs in food and beverage stores and in general merchandise stores. Five of the nine geographic divisions reported a decrease in separations from 2004, with the largest declines in the Pacific (119,635), South Atlantic (24,682), and Middle Atlantic (12,119) divisions. (See table 25.)

- Illinois had the largest number of worker separations, 101,106, largely in administrative and support services. The States with the next-highest totals of separations (including seasonal layoffs) were California (80,682), New York (70,565), and Florida (70,295). (See table 26.) When the substantial impact of seasonal layoffs is excluded, California had the highest separations total for 2005 (58,359 workers), followed by Florida (56,959) and Louisiana (55,707).

- Thirteen States reached their lowest annual totals of laid-off workers since annual data became available in 1996, while Louisiana, Mississippi and Wyoming reached new highs. The large increase in the number of laid-off workers in Louisiana and Mississippi were primarily due to the effects of Hurricanes Katrina and Rita. Twenty-nine States had over-the-year declines in the number of laid-off workers, led by California (126,105), Florida (15,137), Pennsylvania (11,631), and Georgia (9,562). Of the 21 States and the District of Columbia reporting an over-the-year increase in the number of laid-off workers, Louisiana (48,069), Mississippi (11,576), Ohio (7,168), and Colorado (6,720) experienced the sharpest gains. (See table 26.)

- Sixty percent of events and 53 percent of separations occurred in metropolitan areas, an increase from 2004, when 56 percent of events and 47 percent of separations occurred in such areas. Among the 367 metropolitan areas, New Orleans-Metairie-Kenner, reported the highest number of separations (48,175), largely from food services and drinking places and from administrative and support services. New Orleans-Metairie-Kenner, St. Louis, and Gulfport-Biloxi entered the top 10 metropolitan areas in terms of laid-off workers, while Riverside-San Bernardino-Ontario, Buffalo-Niagara Falls, and San Francisco-Oakland-Fremont dropped out of the top 10. (See table 27.)

### **Recall expectations**

- In 2005, employers expected a recall in over one-half of all extended mass layoff events, the highest percentage since 1997. Industries where the expectation of recall was highest following a layoff included mining (91 percent), construction (80 percent), and arts, entertainment, and recreation (78 percent). Layoffs in the finance and insurance (8 percent) sector and information (18 percent) sector had the lowest percentages of recall expectation. Excluding seasonal and vacation-period layoffs (in which a recall was expected 95 percent of the time), a recall was expected in 32 percent of events, up from 27 percent in 2004. (See tables 28 and 29.)

- Of those establishments expecting a recall, 48 percent indicated that all workers would eventually be recalled, and 91 percent expected to recall at least half of the workers. (See table 28.)

- Employers citing business ownership change, bankruptcy, reorganization within company, and financial difficulty as the reason for the layoff had the lowest percentages of recall expectation. Layoffs due to environment-related, nonnatural disaster, vacation period, seasonal and plant or machine repair registered the highest recall expectations. (See table 29.)

- Manufacturing industries accounted for 34 percent of all events and 33 percent of the separations from which the employer did not expect a recall. Layoffs without an expectation of recall occurred mainly in transportation equipment, computer and electronic products, and food manufacturing. Administrative and waste services accounted for an additional 17 percent of the laid-off workers where no recall was expected, mostly in professional employer organizations. (See table 30.)

- Internal company restructuring was the reason cited most frequently for layoffs from which no recall is expected, accounting for 46 percent of such layoff events and 48 percent of separations. Layoffs due to contract completion accounted for an additional 22 percent of layoffs events

with no expectation of recall and 20 percent of separations. (See table 30.)

### **Permanent worksite closures**

- Employers reported that 11 percent of all extended mass layoff events resulted in a permanent closure of the worksite, affecting 107,325 workers. The number of workers involved in closures reached its lowest level in the program. (See table 31.)

- Separations in permanent closures in 2005 were due mainly to internal company restructuring. (See table 31.)

- Manufacturing accounted for 44 percent of events and 45 percent of separations resulting in a worksite closure in 2005. These events occurred largely in transportation equipment, food manufacturing, fabricated metal products, and computer and electronic products. Retail trade accounted for 13 percent of the layoff events and 16 percent of separations resulting from closures during the year, largely in food and beverage stores. (See table 32.) Six major industry sectors (manufacturing, mining, retail trade, transportation and warehousing, utilities, and wholesale trade) reached series lows in terms of closure-related separated workers in 2005.

- In 2005, manufacturing establishments producing

fabricated metals, machinery, and primary metals moved into the top 10 three-digit NAICS industries in terms of the number of laid-off workers in permanent closures. These industries replaced apparel manufacturing, food services and drinking places, and telecommunications. (See table 33.)

- California registered the highest number of separations in permanent closure-related events (15,027), followed by Florida (12,172) and New York (10,309). California reported the largest decrease (14,041) in separations due to closures, while New York had the largest increase (3,916) in laid-off workers due to closures. (See table 34.) Twenty States and the District of Columbia reached their lowest closure-related separation levels in the program in 2005.

- Among the 367 Metropolitan Areas, employers in New York-Northern New Jersey-Long Island, NY-NJ-PA reported the highest number of separations (10,202) in permanent closure-related events, followed by Los Angeles-Long Beach-Santa Ana, CA (5,102). Tampa-St. Petersburg-Clearwater and Riverside-San Bernardino-Ontario (CA) entered the top 5 metropolitan areas this year in terms of workers laid off in permanent closures, replacing Miami-Fort Lauderdale-Miami Beach and Las Vegas-Paradise. (See table 35.)

**Table 1. Numbers of extended mass layoff events, separations, and initial claimants for unemployment insurance, private nonfarm sector, 1997–2005**

Year/quarter	Events <sup>1</sup>	Separations <sup>1</sup>	Initial claimants for unemployment insurance <sup>1</sup>

<sup>1</sup> Information technology-producing industries are defined in Digital Economy 2003, (U.S. Department of Commerce, Economics and Statistics Administration, 2003).

<sup>2</sup> The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: semiconductor machinery manufacturing; office machinery manufacturing; electronic computer manufacturing; computer storage device manufacturing; computer terminal manufacturing; other computer peripheral equipment manufacturing; electron tube manufacturing; bare printed circuit board manufacturing; semiconductors and related device manufacturing; electronic capacitor manufacturing; electronic resistor manufacturing; electronic coils, transformers, and inductors; electronic connector manufacturing; printed circuit assembly manufacturing; other electronic component manufacturing; industrial process variable instruments; electricity and signal testing instruments; analytical laboratory instrument manufacturing; computer and software merchant wholesalers; and computer and software stores.

<sup>3</sup> The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: software publishers; Internet service

providers; Web search portals; data processing and related services; computer and software merchant wholesalers; computer and software stores; custom computer programming services; computer systems design services; computer facilities management services; other computer related services; office equipment rental and leasing; and computer and office machine repair.

<sup>4</sup> The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: telephone apparatus manufacturing; audio and video equipment manufacturing; broadcast and wireless communications equipment; fiber optic cable manufacturing; software reproducing; and magnetic and optical recording media manufacturing.

<sup>5</sup> The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: wired telecommunications carriers; cellular and other wireless carriers; telecommunications resellers; cable and other program distribution; satellite telecommunications; other telecommunications; and communication equipment repair.

**Table 5. Industry distribution: Extended mass layoff events and separations, private nonfarm sector, 50 highest three-digit NAICS industries in 2005**

Industry	NAICS	2004			2005		
		Events	Separations	Rank <sup>1</sup>	Events	Separations	Rank <sup>1</sup>

<sup>1</sup> See footnote 1, table 1.

<sup>2</sup> Data do not meet Bureau of Labor Statistics or State agency disclosure standards.

<sup>3</sup> Beginning with data for 2004, these reasons for layoff are no longer used. For additional information, see the Technical Note.

<sup>4</sup> Non-natural disaster was added as a reason for layoff in the third quarter of 2001, in order to be able to identify layoffs directly or indirectly related to the September 11 attacks. Thus, data for 2001 pertain to the third and fourth quarters only.

NOTE: Dash represents zero.

<sup>1</sup> The Mass Layoff Statistics (MLS) program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because such individuals are classified as employed in the CPS.

Final payment information for MLS claimants is collected weekly. (See the Technical Note for additional information.)

<sup>2</sup> See footnote 1, table 1.

<sup>3</sup> Data do not meet Bureau of Labor Statistics or State agency disclosure standards.

<sup>1</sup> Metropolitan areas are ranked by the number of separations in 2005.

<sup>2</sup> See footnote 1, table 1.

<sup>3</sup> Data do not meet BLS or state agency disclosure standards.

NOTE: The geographic boundaries of the metropolitan areas shown in this table are defined in U.S. Office of Management and Budget Bulletin 06-01, December 5, 2005.

**Table 28. Summary of employer expectations of a recall from extended mass layoffs, private nonfarm sector, 1998-2005**

Nature of recall	Percent of events <sup>1</sup>							
	1998	1999	2000	2001	2002	2003	2004	2005
<b>ALL LAYOFF EVENTS</b>								
Anticipate a recall.....	55.0	53.0	55.0	39.0	41.4	43.2	51.1	56.2
<b>Timeframe</b>								
Within 6 months.....	82.6	83.7	83.2	79.6	79.1	82.4	84.2	87.1
Within 3 months.....	54.1	45.4	45.8	45.3	45.9	47.2	47.7	50.1
<b>Size of recall</b>								
At least half.....	92.1	88.9	89.5	84.2	89.8	87.5	90.1	90.6
All workers.....	64.1	50.7	50.5	40.5	41.6	43.7	47.1	47.9
<b>LAYOFF EVENTS DUE TO SEASONAL WORK AND VACATION PERIOD</b>								
Anticipate a recall.....	90.8	93.9	94.5	90.1	92.6	94.2	95.1	94.8
<b>Timeframe</b>								
Within 6 months.....	88.9	89.8	88.3	88.2	86.7	87.5	87.7	91.5
Within 3 months.....	50.3	42.2	42.1	40.8	45.1	44.5	43.0	45.9
<b>Size of recall</b>								
At least half.....	97.2	96.5	95.8	95.2	96.0	95.2	96.3	96.7
All workers.....	71.0	58.0	56.7	53.8	54.2	54.1	54.7	55.0
<b>ALL LAYOFFS EVENTS, EXCLUDING THOSE DUE TO SEASONAL WORK AND VACATION PERIOD</b>								
Anticipate a recall.....	38.9	32.3	33.5	25.3	23.5	23.4	26.6	31.6
<b>Timeframe</b>								
Within 6 months.....	75.9	74.6	75.4	71.3	68.6	74.4	77.1	78.5
Within 3 months.....	58.0	50.0	51.6	49.5	47.0	51.4	56.9	58.7
<b>Size of recall</b>								
At least half.....	86.7	77.8	79.8	73.7	81.3	75.5	77.7	78.9
All workers.....	56.9	40.0	40.8	27.8	24.5	27.3	31.9	34.3

<sup>1</sup> See footnote 1, table1.

Table 29. Distribution of extended mass layoff events with expected recall, by industry and reason for layoff, private nonfarm sector, 1997-2005

Measure	Percent of layoff events							
	1998	1999	2000	2001	2002	2003	2004	2005

Not reported .....	1.1	1.2	.8	.7	.3	–	–	–

<sup>1</sup> See footnote 1, table 1.

<sup>2</sup> Beginning with data for 2004, these reasons for layoff are no longer used. For additional information, see the Technical Note.

<sup>3</sup> Non-natural disaster was added as a reason for layoff in the

third quarter of 2001, in order to identify layoffs directly or indirectly related to the September 11 attacks. Thus, data for 2001 pertain to the third and fourth quarters only.

NOTE: Dash represents zero.

<sup>1</sup> See footnote 1, table 1.

<sup>2</sup> Data do not meet Bureau of Labor Statistics or State agency disclosure standards.

<sup>3</sup> Beginning with data for 2004, these reasons for layoff are no longer used. For additional information, see the Technical Note.

<sup>4</sup> Non-natural disaster was added as a reason for layoff in the third

quarter 2001 in order to identify layoffs directly or indirectly related to the September 11 attacks. Thus, data for 2001 pertain to the third and fourth quarters only.

<sup>5</sup> Internal company restructuring consists of bankruptcy, business ownership change, financial difficulty, and reorganization within company.

NOTE: Dash represents zero.

# Technical Note

**T**he Mass Layoff Statistics (MLS) program is a Federal-State program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each State's unemployment insurance (UI) database. Establishments that have at least 50 initial claims for unemployment insurance filed against them during a consecutive 5-week period are contacted by the State agency in charge of the UI program to determine whether these separations are of at least 31 days duration, and, if so, information is obtained on the total number of persons separated and the reasons for these separations. Establishments are identified according to industry classification and location, and unemployment insurance claimants are identified by such demographic factors as age, race, sex, ethnic group, and place of residence. The MLS program yields information on an individual's entire spell of unemployment, to the point at which regular unemployment insurance benefits are exhausted.

Beginning with data for 2004, the scope of extended mass layoffs and plant closings was redefined to cover only the private nonfarm economy. Therefore, extended mass layoff information for agriculture and government are no longer collected.

## Definitions

*Clothing manufacturing and distribution.* Industries involved in the production and distribution of clothing. These industries include textile mills; apparel manufacturing; footwear manufacturing; apparel and piece goods merchant wholesalers; clothing stores; shoe stores; department stores; and formal wear and costume rental.

*Communications equipment.* The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: Telephone apparatus manufacturing; audio and video equipment manufacturing; broadcast and wireless communications equipment; fiber optic cable manufacturing; software reproducing; and magnetic and optical recording media manufacturing.

*Communications services.* The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: Wired telecommunications carriers; cellular and other wireless carriers; telecommunications resellers; cable and other program distribution; satellite tele-

communications; other telecommunications; and communication equipment repair.

*Computer hardware.* The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: Semiconductor machinery manufacturing; office machinery manufacturing; electronic computer manufacturing; computer storage device manufacturing; computer terminal manufacturing; other computer peripheral equipment manufacturing; electron tube manufacturing; bare printed circuit board manufacturing; semiconductors and related device manufacturing; electronic capacitor manufacturing; electronic resistor manufacturing; electronic coils, transformers, and inductors; electronic connector manufacturing; printed circuit assembly manufacturing; other electronic component manufacturing; industrial process variable instruments; electricity and signal testing instruments; analytical laboratory instrument manufacturing; computer and software merchant wholesalers; and computer and software stores.

*Continued claim.* A claim filed after the initial claim, by mail, telephone, or in person, for waiting period credit or payment for a certified week of unemployment. The MLS program collects continued claims for 1 week each month. That is generally the calendar week that includes the 12<sup>th</sup> day of the month and is referred to as the Current Population Survey (CPS) reference week. Because continued claims are not tracked for all weeks, an exact measure of insured jobless duration is not available.

*Establishment.* A unit at a single physical location at which predominantly one type of economic activity is conducted.

*Extended layoff event.* Fifty or more initial claims for unemployment insurance benefits from an establishment during a 5-week period, with at least 50 workers separated for more than 30 days.

*Final payment recipients.* Persons who have exhausted all of their unemployment insurance benefits and are no longer eligible for any further benefits.

*Food processing and distribution.* Industries that are involved in the production and distribution of food. These industries include food manufacturing; beverage manufacturing; grocery and related product wholesalers;

farm product raw material merchant wholesalers; alcoholic beverage merchant wholesalers; farm supplies merchant wholesalers; food and beverage stores; food (health) supplement stores; refrigerated warehousing and storage; farm product warehousing and storage; veterinary services; and food services and drinking places.

*Initial claimant.* A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

*Layoff.* The separation of persons from an employer as part of a mass layoff event. (See below.) Such layoffs involve both persons who are subject to recall and those who are terminated.

*Mass layoff (event).* Fifty or more initial claims for unemployment insurance benefits from an establishment beginning in a given month, regardless of duration.

*Movement-of-work action:* Employer confirmed relocation of work within the same company or to other companies, domestically or outside the U.S. Because employers may cite more than one location to which work is moving, a layoff event may have more than one action associated with it.

*Movement-of-work separations:* The number of separations specifically associated with movement-of-work actions.

*Separations:* The total number of people laid-off in an extended mass layoff event for more than 30 days, according to the employer.

*Software and computer services.* The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: Software publishers; internet service providers; web search portals; data processing and related services; computer and software merchant wholesalers; computer and software stores; custom computer programming services; computer systems design services; computer facilities management services; other computer related services; office equipment rental and leasing; and computer and office machine repair.

*Worksite closure.* The full closure of either multi-unit or single-unit establishments or the partial closure of a multi-unit establishment where entire worksites affected by layoffs are closed or planned to be closed.

### **Movement of work concepts and questions**

Because of the employer interview component, the BLS decided to use the MLS program as a vehicle for collecting additional information on offshoring and outsourcing

associated with job loss, by adding questions that address movement of work. The term “moving work” means that the company experiencing the layoff has reassigned work activities that were performed at a worksite by the company’s employees (1) to another worksite within the company; (2) to another company under formal arrangements at the same worksite; or (3) to another company under formal arrangements at another worksite. The type of work activities subject to movement can include accounting, customer service, cleaning, warehousing, etc.

“Overseas relocation” is the movement of work from within the United States to locations outside of the United States. “Overseas relocation” can occur within the same company and involve movement of work to a different location of that company outside of the United States, or to a different company altogether.

“Domestic relocation” is the movement of work to other locations inside the United States, either within the same company or to a different company.

“Overseas relocation” and “domestic relocation” are no longer used in the same way as they were in earlier extended mass layoff reports. Therefore, the data presented in this report are not comparable to those that were presented in earlier reports.

Questions on movement of work and location are asked for all identified layoff events when the reason for separation is other than “seasonal work” or “vacation period.” Seasonal and vacation layoff events were excluded because movement of work appears unlikely.

Questions on movement of work are asked after the State analyst verifies that a layoff in fact occurred and lasted more than 30 days, and obtained the total number of workers separated from jobs, the date the layoff began, and the economic reason for the layoff. If the reason for layoff is other than seasonal or vacation, the employer is asked the following:

(1) “Did this layoff include your company moving work from this location(s) to a different geographic location(s) within your company?”

(2) “Did this layoff include your company moving work that was performed in-house by your employees to a different company, through contractual arrangements?”

A “yes” response to either question is followed by:

“Is the location inside or outside of the U.S.?” and “How many of the layoffs were a result of this relocation?”

Layoff actions are classified as “overseas relocation” if the employer responds “yes” to questions 1 and/or 2, and indicates that the location(s) was outside of the United States. Domestic relocation is determined if the employer responds “yes” to questions 1 and/or 2 and indicates that the location(s) was within the United States.

After asking the movement of work questions, the employer interview continues and responses are obtained for questions on recall expectations and open/closed status of the worksite.

The MLS program uses a range to report separations associated with movement of work. The data provided by respondents on the number of separations associated with specific movement of work actions establish a lower bound. The upper bound is the total number of separations in extended mass layoff events where there was some movement of work. The difference between the lower and upper bounds includes an unknown number of separations that were not due to movement of work and an unknown number of separations from movement of work actions where employers could not provide detail.

### **Reliability of the data**

The identification of establishments and layoff events in the MLS program and associated characteristics of claimants is based on administrative data on covered establishments and unemployment insurance claims, and, therefore, is not subject to issues associated with sampling error. Nonsampling errors such as typographical errors may

occur but are not likely to be significant. While the MLS establishments and layoff events are not subject to sampling error, and all such employers are asked the employer interview questions, the employer responses are subject to nonsampling error. Nonsampling error can occur for many reasons, including the inability to obtain information for all respondents, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data. For 2005, outright refusal to participate in the employer interview accounted for 2.8 percent of all private nonfarm events. Employers in 104 instances were included in the total number of actions entailing movement of work, but were unable to provide the number of separations specifically associated with the movement of work. Out-of-country moves were involved in 41 of these instances.
