CONSUMER PRICE INDEX: MARCH 2005

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.8 percent in March, before seasonal adjustment, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The March level of 193.3 (1982=84=100) was 3.1 percent higher than in March 2004.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.7 percent in March, prior to seasonal adjustment. The March level of 188.6 was 3.1 percent higher than in March 2004.

The Chained Consumer Price Index for All Urban Consumers (C-CPI-U) increased 0.7 percent in March on a not seasonally adjusted basis. The March level of 112.5 (December 1999=100) was 2.6 percent higher than in March 2004. Please note that the indexes for the post-2002 period are subject to revision.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.6 percent in March, following an increase of 0.4 percent in February. Energy costs advanced sharply for the second consecutive month--up 4.0 percent in March. Within energy, the index for petroleum-based energy increased 7.8 percent, while the index for energy services decreased 0.3 percent. The index for food rose 0.2 percent, as the index for food at home turned up in March after registering declines in each of the preceding three months. The index for all items less food and energy, which rose 0.3 percent in February, increased 0.4 percent in March. An upturn in the index for apparel and a larger increase in the index for lodging while away from home accounted for the larger advance in March.

For the first three months of 2005, consumer prices increased at a seasonally adjusted annual rate (SAAR) of 4.3 percent. This compares with an increase of 3.3 percent for all of 2004. The index for energy, which rose 16.6 percent in 2004, advanced at a 21.1 percent SAAR in the first quarter of 2005 and accounted for about three-eights of the first quarter advance in the overall CPI-U. Petroleum-based energy costs increased at a 39.6 percent annual rate and charges for energy services rose at a 2.3 percent annual rate. The food index rose at a 1.3 percent SAAR in the first quarter of 2005. The index for grocery store food prices decreased at a 0.8 percent annual rate, reflecting a decline in the index for fruits and vegetables--down at an annual rate of 21.1 percent.

Excluding food and energy, the CPI-U advanced at a 3.3 percent SAAR in the first quarter, following a 2.2 percent rise in all of 2004. While most categories advanced at a faster rate in the first quarter of 2005 than in all of 2004, about 70 percent of the acceleration was accounted for by a larger increase in the index for shelter--up at a 4.4 percent SAAR in the first quarter after increasing 2.7 percent in all of 2004. An upturn in the index for apparel and a larger increase in the index for medical care also contributed to the acceleration in the first quarter of 2005. The annual rates for selected groups for the last seven and one-quarter years are shown below.

The food and beverages index increased 0.2 percent in March. The index for food at home, which had declined in each of the preceding three months, advanced 0.2 percent in March. The indexes for nonalcoholic beverages, for dairy products, and for other food at home, each of which had declined in February, turned up in March, accounting for 95 percent of the acceleration in the food at home index. Also contributing to the upturn were a smaller decline in the index for fruits and vegetables and a larger increase in the index for cereal and bakery products. Partially offsetting these changes was a smaller increase in the index for meats, poultry, fish, and eggs. Within the latter group, poultry and beef prices rose 1.6 and 0.7 percent, respectively, while the indexes for pork and for fish and seafood declined 0.8 and 0.4 percent, respectively. The index for eggs, which rose 3.0 percent in February, declined 4.5 percent in March. The index for fruits and vegetables declined 0.5 percent in March, its fourth consecutive monthly decline. The indexes for fresh fruits and for processed fruits and vegetables declined 2.6 and 0.2 percent, respectively, while the index for fresh vegetables increased 1.6 percent. The index for milk, which declined 1.0 percent in February, rose 1.3 percent in March, accounting for the upturn in the index for dairy products. The index for cereals and bakery products increased 0.2 percent in March, following a 0.1 percent rise in February. The other two components of the food and beverage index--food away from home and alcoholic beverages--increased 0.2 and 0.3 percent, respectively.

The index for housing rose 0.5 percent in March. Shelter costs, which rose 0.3 percent in February, increased 0.6 percent in March, largely as a result of a 3.9 percent advance in the index for lodging away from home. (Prior to seasonal adjustment, the index for lodging away from home rose 7.3 percent.) The indexes for rent and owners' equivalent rent increased 0.2 and 0.3 percent, respectively. The index for fuels and utilities rose 0.1 percent, following a 0.8 percent increase in February. The index for fuel oil increased 5.9 percent, while the index for gas and electricity declined 0.3 percent. A 1.7 percent decrease in the index for natural gas more than offset a 0.4 percent increase in the index for electricity. The index for household furnishings and operations was unchanged in March.

The transportation index rose 1.9 percent in March, largely as a result of a 7.9 percent increase in the index for gasoline. As of March, the price of gasoline was 4.2 percent higher than its previous peak level of June 2004. The index for new vehicles turned down in March, declining 0.4 percent, its first decrease in six months. During the last 12 months, new vehicle prices have risen 0.9 percent. The index for used cars and trucks rose 0.1 percent in March to a level 5.0 percent above March 2004. The index for public transportation increased 1.3 percent in March, reflecting increases in the indexes for airline fares and for intracity transportation. Airline fares registered their second consecutive advance, up 2.7 percent in March, but are 1.4 percent lower than a year ago.

The index for apparel increased 0.8 percent in March. (Prior to seasonal adjustment, apparel prices rose 4.0 percent, reflecting the continued introduction of spring-summer wear. Prices for women's and girls' apparel registered the largest advance--up 7.1 percent.)

Medical care costs rose 0.5 percent in March to a level 4.3 percent higher than a year ago. The index for medical care commodities--prescription drugs, nonprescription drugs, and medical supplies--was virtually unchanged in March. The index for medical care services rose 0.6 percent in March. Charges for professional services and for hospital and related services increased 0.4 and 0.7 percent, respectively.

The index for recreation was unchanged in March. Increases in the indexes for cable and satellite television and radio service, for admissions to sporting events, for recreational reading materials, and for pets, pet products and services were offset by declines in the indexes for club membership dues and fees for participant sports, for toys, and for sporting goods.

The index for education and communication increased 0.2 percent in March. The education index rose 0.5 percent, while the index for communication costs declined 0.2 percent. Within the latter group, the index for telephone services decreased 0.1 percent, as a decline in long distance charges, both land line and wireless, more than offset an increase in local telephone charges. The index for personal computers and peripheral equipment declined 0.7 percent in March and 15.2 percent during the last 12 months.

The index for other goods and services rose 0.1 percent in March. The indexes for tobacco and smoking products and for personal care each increased 0.1 percent. The index for miscellaneous personal

services rose 0.2 percent, reflecting a 0.4 percent increase in financial services associated with tax return preparation and other accounting fees.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers increased 0.6 percent in March.

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) the CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include in addition to wage earners and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments-department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights, which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period. For the C-CPI-U data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and subject to two annual revisions.

The index measures price change from a designed reference date. For the CPI-U and the CPI-W the reference base is 1982-84 equals 100.0. The reference base for the C-CPI-U is December 1999 equals 100. An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

| | |
|---------------------------|-------|
| CPI | 115.7 |
| Less previous index | 111.2 |
| Equals index point change | 4.5 |

Percent Change

| | |
|-----------------------------------|-----------|
| Index point difference | 4.5 |
| Divided by the previous index | 111.2 |
| Equals | 0.040 |
| Results multiplied by one hundred | 0.040x100 |
| Equals percent change | 4.0 |

Regions Defined

The states in the four regions shown in Tables 3 and 6 are listed below.

The Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

The Midwest--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The South--Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and the District of Columbia.

The West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. Seasonally adjusted indexes and seasonal factors are computed annually. Each year, the last 5 years of seasonally adjusted data are revised. Data from January 2000 through December 2004 were replaced in January 2005. Exceptions to the usual revision schedule were: the updated seasonal data at the end of 1977 replaced data from 1967 through 1977; and, in January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the [CPI Detailed Report](#).

The seasonal movement of All items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 43 of the 73 components are seasonally adjusted for 2005.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the fuel oil, utility (piped) gas, motor fuels, and educational books and supplies indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the Nonalcoholic beverages index, the procedure was used to offset the effects of labor and supply problems for coffee. The procedure was used to account for unusual butter fat supply reductions, changes in milk supply, and large swings in soybean oil inventories affecting the Fats and oils series. For Dairy products, it mitigated the effects of significant changes in milk, butter and cheese production levels. For Fresh vegetable series, the method was used to account for the effects of hurricane-related disruptions. For Electricity, it was used to offset an increase in demand due to warmer than

expected weather, increased rates to conserve supplies, and declining natural gas inventories. For new vehicle series, the procedure was used to offset the effects of a model changeover combined with financing incentives.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ; Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA;

Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.
