Fatal Work Injuries in Georgia – 2014

Fatal work injuries totaled 148 in 2014 for Georgia, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Janet S. Rankin noted that while the 2014 count was preliminary, the number of work-related fatalities in Georgia rose by 31 over the year. Fatal occupational injuries in the state have ranged from a high of 249 in 1994, to a low of 101 in 2012. (See [chart 1](#).)

Nationwide, a preliminary total of 4,679 fatal work injuries were recorded in 2014, up from a revised count of 4,585 fatalities in 2013, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2014 CFOI data will be released in the late spring of 2016.

Chart 1. Total fatal occupational injuries, Georgia, 2005–14

NOTE: Data for 2014 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Of the 148 fatal work injuries reported in Georgia in 2014, 59 resulted from transportation incidents and 32 from violence and other injuries by persons or animals. Together these two major categories accounted for over three-fifths of all fatal work injuries reported in the state. (See [table 1](#).) Other major event categories each reported 30 or fewer deaths. Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of workplace fatality with 36 deaths. This category accounted for nearly a quarter of all on-the-job fatalities in the state. In the violence and other injuries by persons or animals category,

all of the deaths were homicides (intentional injury by other person). (Note that roadway counts presented in this release are expected to rise when updated 2014 data are released in the late spring of 2016 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were also the most frequent fatal workplace event in 2014, accounting for 40 percent of fatal work injuries, matching the state’s share of fatalities for this event. (See [chart 2](#).) Falls, slips, and trips, was the second most frequent type of event nationally, with 17 percent of work-related fatalities; the share in Georgia was 20 percent. Violence and other injuries by persons or animals accounted for 16 percent of the nation’s workplace fatalities, while in the state, this event was responsible for 22 percent of workplace fatalities. Contact with objects and equipment was responsible for 15 percent of work-related fatalities for both the state and the nation.

Chart 2. Fatal occupational injuries by selected event, Georgia and the United States, 2014

Additional highlights:

- Both the construction and the trade, transportation, and utilities industries had the largest number of fatalities in the state with 31 each, compared to 23 and 37, respectively, the previous year. Falls, trips, and slips (19) accounted for the most fatalities in construction. Transportation incidents (17) were the most frequent event or exposure in trade, transportation, and utilities. (See [table 2](#).)
- Natural resources and mining, and manufacturing had the second highest fatality counts with 15 each. Transportation incidents and contact with objects and equipment tied for the most deaths in the natural resources and mining industry. The majority of manufacturing fatalities resulted from transportation incidents.
- Transportation and material moving occupations had the highest number of fatal work injuries with 40. Heavy and tractor-trailer truck drivers suffered 27 of those deaths. (See [table 3](#).)

- Men accounted for 136, or 92 percent, of the work-related fatalities in the state. (See [table 4](#).) Transportation incidents made up 40 percent of these fatalities.
- In Georgia, 57 percent of those who died from a workplace injury were white non-Hispanics. Nationwide, this group accounted for 68 percent of work-related deaths.
- Workers 25-54 years old—the prime working age group—accounted for 101, or 68 percent of the state’s work-related fatalities in 2014. Nationally, workers in this group accounted for 58 percent of on-the-job fatalities.
- Of the 148 fatal work injuries in Georgia, 82 percent worked for wages and salaries; the remainder were self-employed. The most frequent fatal event for wage and salary workers was transportation incidents. For the self-employed, falls, slips, and trips were the most frequent fatal events.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This ensures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/pdf/homch9.pdf.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Caught in running equipment or machinery	--	5	3
Caught in running equipment or machinery during maintenance, cleaning	--	3	2
Overexertion and bodily reaction.....	--	--	--

Note: See footnotes at end of table.

Footnotes:

(1) Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

(2) Totals for 2013 are revised and final.

(p) Data for 2014 are preliminary. Revised and final 2014 data are scheduled to be released in spring 2016.

NOTE: Totals for major categories may include subcategories not shown separately. Percentages may not add to totals because of rounding. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event. Dashes indicate no data reported or data that do not meet publication guidelines.
