### **HIGHLIGHTS OF MOBILE, ALA. NATIONAL COMPENSATION SURVEY – AUGUST 2010**

Workers in the Mobile Metropolitan Statistical Area (MSA) earned an average of \$18.05 per hour in August 2010, according to new survey results from the National Compensation Survey (NCS) released by the U.S. Bureau of Labor Statistics. Regional Commissioner Janet S. Rankin noted that wage data were reported for workers in a wide range of occupational groups, including average hourly earnings of \$21.95 for healthcare practitioner and technical occupations and \$12.14 for sales and related occupations. Another occupational group, healthcare support occupations, had a mean hourly wage rate of \$11.32. The NCS data available for the Mobile area include earnings for 16 major occupational groups with additional detail for selected occupations within those groups. (See table 1.)

Registered nurses, part of the healthcare practitioner and technical occupational group, earned \$24.95 per hour, while licensed practical and licensed vocational nurses averaged \$15.04. Within the sales and related occupational group, cashiers averaged \$8.98 per hour. Nursing aides, orderlies, and attendants, an occupation within the healthcare support occupational group, earned \$11.36 per hour. (See table 1.)

Broad coverage of selected occupational characteristics is available from NCS for the local area. Full-time workers averaged \$19.43 per hour while their part-time counterparts earned \$9.44. Union workers earned \$15.82 and non-union workers, \$18.12. Workers in establishments with 1-99 workers averaged \$16.44 per hour, those in establishments with 100-499 workers earned \$19.23, and those in establishments with 500 or more employees earned \$20.04.

The occupational wage data available from NCS may be used by businesses for establishing pay plans, making decisions concerning plant location, and in collective bargaining negotiations. Individuals may use such data to help choose potential careers. NCS results also include the work level and respective earnings for occupations determined by a point factor leveling process. The four occupational leveling factors are: knowledge, job controls and complexity, contacts, and physical environment. Details on the NCS are available at [www.bls.gov/ncs/home.htm](http://www.bls.gov/ncs/home.htm).

The NCS data reported here covered 167 establishments with one or more workers in private industry and State and local governments. Agricultural establishments, private households, the self-employed, and the Federal Government were excluded from the survey. This sample of establishments represented

155,900 workers in the Mobile Metropolitan Statistical Area (MSA) which is comprised of Mobile County in Alabama.

**Survey availability**

Complete survey results are contained in the Mobile, AL National Compensation Survey August 2010 which is available on the Internet in both text and PDF formats at [www.bls.gov/ncs/ocs/compub.htm](http://www.bls.gov/ncs/ocs/compub.htm).

For personal assistance or further information on the National Compensation Survey data, as well as other Bureau data, contact the Southeast Information Office by calling (404) 893-4222 from 9:00 a.m. to 12:00 p.m. and 1:00 p.m. to 4:00 p.m. ET.

<sup>1</sup> Earnings are the straight-time hourly wages or salaries paid to employees. They include incentive pay, cost-of-living adjustments, and hazard pay. Excluded are premium pay for overtime, vacations, holidays, nonproduction bonuses, and tips. The mean is computed by totaling the pay of all workers and dividing by the number of workers, weighted by hours.

<sup>2</sup> Employees are classified as working either a full-time or a part-time schedule based on the definition used by each establishment. Therefore, a worker with a 35-hour-per-week schedule might be considered a full-time employee in one establishment, but classified as part-time in another firm, where a 40-hour week is the minimum full-time schedule.

<sup>3</sup> Workers are classified by occupation using the 2000 Standard

Occupational Classification (SOC) system.

<sup>4</sup> The relative standard error (RSE) is the standard error expressed as a percent of the estimate. It can be used to calculate a "confidence interval" around a sample estimate.

SOURCE: Bureau of Labor Statistics, National Compensation Survey.

NOTE: Dashes indicate that no data were reported or that data did not meet publication criteria. Overall occupational groups may include data for categories not shown separately.
