Producer Price Indexes – September 2026

The Producer Price Index for final demand increased 1.3 percent in September, seasonally adjusted. Final demand prices moved up 0.5 percent in August and 0.2 percent in July. (See table A.) The September increase is the largest advance since rising 1.7 percent in March 2022. On an unadjusted basis, the index for final demand climbed 6.3 percent for the 12 months ended in September, the largest 12-month increase since moving up 6.4 percent in December 2022.

In September, prices for final demand goods rose 2.6 percent, and the index for final demand services advanced 0.8 percent.

Prices for final demand less foods, energy, and trade services moved up 0.5 percent in September after increasing 0.3 percent in August. For the 12 months ended in September, the index for final demand less foods, energy, and trade services rose 5.0 percent.

Final Demand

Final demand goods: Prices for final demand goods advanced 2.6 percent in September, the largest increase since data were first calculated in December 2009. Over 80 percent of the broad-based rise in September is attributable to the index for final demand energy, which jumped 10.8 percent. Prices for final demand foods and for final demand goods less foods and energy advanced 1.2 percent and 0.3 percent, respectively.

Product detail: Half of the September increase in the index for final demand goods can be traced to prices for gasoline, which jumped 20.3 percent. The indexes for diesel fuel, fresh and dry vegetables, jet fuel, residential electric power, and crude petroleum also rose. In contrast, prices for chicken eggs dropped 39.7 percent. The indexes for thermoplastic resins and materials and for commercial electric power also declined. (See table 2.)

Final demand services: Prices for final demand services moved up 0.8 percent in September, the largest rise since advancing 0.8 percent in April. Nearly half of the broad-based September increase can be attributed to a 1.4-percent rise in margins for final demand trade services. The indexes for final demand transportation and warehousing services and for final demand services less trade, transportation, and warehousing also advanced, 3.4 percent and 0.3 percent, respectively.

Product detail: Over 20 percent of the September increase in prices for final demand services can be traced to margins for machinery and vehicle wholesaling, which advanced 3.9 percent. The indexes for truck transportation of freight, food and alcohol wholesaling, traveler accommodation services, food retailing, and airline passenger services also rose. Conversely, margins for automotive fuels and lubricants retailing dropped 30.3 percent. The indexes for securities brokerage, dealing, and investment advice and for chemicals and allied products wholesaling also fell.

Intermediate Demand by Commodity Type

Within intermediate demand in September, price increases were broad-based, with the index for processed goods rising 2.5 percent, prices for unprocessed goods moving up 8.4 percent, and the index for services advancing 0.9 percent. (See tables B and C.)

Processed goods for intermediate demand: The index for processed goods for intermediate demand moved up 2.5 percent in September, the largest rise since jumping 2.8 percent in May. Over 80 percent of the September advance is attributable to a 10.2-percent increase in prices for processed energy goods. The indexes for processed materials less foods and energy and for processed foods and feeds also moved up, 0.5 percent and 0.4 percent, respectively. For the 12 months ended in September, prices for processed goods for intermediate demand rose 14.1 percent, the largest 12-month increase since advancing 14.3 percent in August 2022.

Product detail: Nearly half of the September rise in the index for processed goods for intermediate demand can be traced to a 21.0-percent increase in prices for diesel fuel. The indexes for gasoline, jet fuel, lubricating oil base stocks, prepared animal feeds, and fabricated structural metal products also moved higher. In contrast, prices for commercial electric power declined 0.6 percent. The indexes for thermoplastic resins and materials and for dry sausage also fell.

Unprocessed goods for intermediate demand: Prices for unprocessed goods for intermediate demand moved up 8.4 percent in September, the largest increase since rising 9.2 percent in February 2022. Over 80 percent of the September advance is attributable to the index for unprocessed energy materials, which jumped 22.2 percent. Prices for unprocessed nonfood materials less energy and for unprocessed foodstuffs and feedstuffs also moved up, 2.5 percent and 0.8 percent, respectively. For the 12 months ended in September, the index for unprocessed goods for intermediate demand rose 21.5 percent, the largest 12-month increase since advancing 29.2 percent in September 2022.

Product detail: Leading the September increase in prices for unprocessed goods for intermediate demand, the index for crude petroleum jumped 28.3 percent. Prices for grains; hay, hayseeds, and oilseeds; natural gas; fresh and dry vegetables; and nonferrous metal ores also rose. Conversely, the index for raw milk decreased 12.3 percent. Prices for slaughter chickens and for aluminum base scrap also declined.

Services for intermediate demand: The index for services for intermediate demand rose 0.9 percent in September, the largest increase since moving up 0.9 percent in April. Over 40 percent of the advance in September can be traced to margins for trade services for intermediate demand, which jumped 2.0 percent. Prices for transportation and warehousing services for intermediate demand and for services less trade, transportation, and warehousing for intermediate demand also increased, 1.8 percent and 0.3 percent, respectively. For the 12 months ended in September, the index for services for intermediate demand rose 6.3 percent, the largest 12-month advance since moving up 6.3 percent in January 2023.

Product detail: Nearly a quarter of the September rise in prices for services for intermediate demand can be traced to a 6.7-percent increase in margins for food and alcohol wholesaling. The indexes for truck transportation of freight; machinery and equipment parts and supplies wholesaling; airline passenger services; courier, messenger, and U.S. postal services; and traveler accommodation services also moved higher. In contrast, prices for securities brokerage, dealing, and investment advice fell 2.9 percent. The indexes for automotive fuels and lubricants retailing and for chemicals and allied products wholesaling also decreased.

Intermediate Demand by Production Flow

Stage 4 intermediate demand: Prices for stage 4 intermediate demand rose 1.1 percent in September, the largest advance since increasing 1.1 percent in May. In September, the index for total goods inputs to stage 4 intermediate demand jumped 1.2 percent, and prices for total services inputs moved up 0.9 percent. (See table D.) Advances in the indexes for gasoline, diesel fuel, food and alcohol wholesaling, machinery and equipment parts and supplies wholesaling, truck transportation of freight, and grains outweighed declines in the indexes for securities brokerage, dealing, and investment advice; chemicals and allied products wholesaling; and commercial electric power. For the 12 months ended in September, prices for stage 4 intermediate demand rose 7.9 percent, the largest 12-month increase since moving up 7.9 percent in October 2022.

Stage 3 intermediate demand: The index for stage 3 intermediate demand increased 1.1 percent in September, the largest advance since rising 1.7 percent in May. In September, prices for total goods inputs to stage 3 intermediate demand moved up 1.3 percent, and the index for total services inputs climbed 0.8 percent. Higher prices for diesel fuel; grains; gasoline; truck transportation of freight; courier, messenger, and U.S. postal services; and lubricating oil base stocks outweighed decreases in the indexes for raw milk, slaughter chickens, and automotive fuels and lubricants retailing. For the 12 months ended in September, prices for stage 3 intermediate demand advanced 7.7 percent, the largest 12-month rise since moving up 8.1 percent in November 2022.

Stage 2 intermediate demand: Prices for stage 2 intermediate demand increased 3.9 percent in September, the largest rise since advancing 4.2 percent in February 2022. In September, the index for total goods inputs to stage 2 intermediate demand jumped 8.9 percent, and prices for total services inputs moved up 0.5 percent. Increases in the indexes for crude petroleum; diesel fuel; gas fuels; food and alcohol wholesaling; hay, hayseeds, and oilseeds; and gasoline outweighed declines in the indexes for automotive fuels and lubricants retailing; securities brokerage, dealing, and investment advice; and thermoplastic resins and materials. For the 12 months ended in September, prices for stage 2 intermediate demand advanced 13.9 percent, the largest 12-month rise since moving up 16.1 percent in September 2022.

Stage 1 intermediate demand: The index for stage 1 intermediate demand increased 2.2 percent in September, the largest advance since rising 2.6 percent in May. In September, prices for total goods inputs to stage 1 intermediate demand moved up 3.1 percent, and the index for total services inputs climbed 1.1 percent. Higher prices for diesel fuel, gasoline, grains, crude petroleum, truck transportation of freight, and jet fuel outweighed decreases in the indexes for securities brokerage, dealing, and investment advice; chemicals and allied products wholesaling; and aluminum base scrap. For the 12 months ended in September, prices for stage 1 intermediate demand advanced 13.5 percent, the largest 12-month rise since moving up 15.6 percent in June 2022.

Highlights of the 2024 PPI User Survey

From July to October 2024, the Bureau of Labor Statistics (BLS) conducted a user survey of its Producer Price Index (PPI) stakeholders to learn more about the data users and how they utilize PPI measures. The survey was distributed via email to more than 16,000 PPI stakeholders who had a preexisting relationship with the BLS, as either a PPI survey respondent, mailing list subscriber, or a data user who had contacted the BLS for technical information or assistance with the PPI. To maximize survey participation, BLS highlighted the survey on the PPI website and shared the survey link on the BLS X (Twitter) account. The survey resulted in a total of 2,301 responses.

The typical user of PPI data is a manager in a business organization who uses the PPI monthly for price trend analysis and forecasting or as a general indicator of inflation. However, there is more to discover in the survey's results than the typical user's profile.

Who are PPI data users?

Of the 2,301 responses, 80 percent reported on their association and 75 percent reported on their occupation.

The survey results indicated PPI data users are primarily businesses (65 percent), with industry/trade associations ranked second (11 percent), and individuals/private citizens ranked third (5 percent). Businesses being the primary user of PPI data isn't an unexpected finding, because PPI data provides information on industrial prices. The business sector uses published PPI price measures for contract price adjustment, comparative price analysis, and price trend forecasting.

Of the 7 percent of data users that identified themselves as members of government, more than a quarter of those users identified their organization as a statistical agency. Most users were affiliated with the U.S. Bureau of Economic Analysis (43 percent), other U.S. statistical agencies (25 percent), and state and local governments (12 percent).

From an occupational viewpoint, data users identified themselves most often as managers (21 percent), accountants (15 percent), controllers or finance officers (14 percent), and business owners (14 percent).

What PPI data are used, and how?

There were 961 responses addressing the multiple-response question on data use. PPI data users reported a wide variety of uses, including for price trend analysis and forecasting (55 percent), as a general indicator of inflation (45 percent), as a comparison to prices a company charges for its goods or services with those of its competitors (29 percent), and as a comparison to prices a company is charged for its inputs (15 percent).

When asked about the economic area(s) they are analyzing with PPI data, more than half of users indicated their focus on the manufacturing sector (54 percent), with construction ranked second (24 percent), and finance ranked third (20 percent).

Some users (28 percent) are applying PPI data to contract price adjustment. Results indicate that the average value of a contract escalated using PPI data is over $148 million with a range of $1,000 to $1 billion. This insight demonstrates the importance of using the PPI as a contract escalator properly, as a 1-percent error in the escalation of a $148 million contract would result in an erroneous $1.48 million adjustment.

Many PPI data users review PPI data monthly (44 percent) or quarterly (15 percent). Most data users select first-published PPI data (45 percent) and/or final PPI data (40 percent) while some users (35 percent) also use PPI data within the 4-month revision window. Furthermore, some data users (40 percent) use seasonally adjusted PPI data, citing a need for consistent comparative data analysis across different time periods (73 percent) and/or for short-to-medium price trend analysis (49 percent).

Results indicate that PPI data users also utilize other BLS indicators, including the Consumer Price Index or CPI (88 percent), the Unemployment Rate (44 percent), and the Employment Cost Index or ECI (37 percent).

Feedback from Data Users

The survey results find that of the PPI data users who provided an opinion, a majority agree that PPI data is high quality (69 percent), easily accessible (65 percent), easily organized (61 percent), and detailed enough (72 percent) to meet their needs. Of the subset of data users (22 percent) that have contacted PPI staff by email or phone within the last 2 years, most users are extremely, very, or moderately satisfied with their ease in contacting PPI staff (89 percent), the quality of response from PPI staff (90 percent), and the timeliness in PPI staff's response (92 percent).

Suggested improvements from data users included coverage expansion, further documentation on product classification and index discontinuation, website navigation assistive resources, and enhanced data visualization tools. Data users' top economic areas of interest for additional PPI coverage include construction; rental and leasing services; professional, scientific, and technical services; and accommodation services.

Comparison with the Previous User Survey

The previous user survey was conducted in 2013.[1] Since then, the PPI structure transitioned from the Stage of Processing (SOP) to the Final Demand-Intermediate Demand (FD-ID) aggregation system and introduced defense and non-defense-related purchase designations for the Government purchases sector, greatly expanding PPI coverage of the U.S. economy. The 2013 survey was conducted electronically, via email, to 42,000 PPI stakeholders. Comparatively, the 2024 survey was distributed electronically to more than 16,000 PPI stakeholders.

The 2013 survey found that the top 3 uses of PPI data, in descending order, were as a general indicator of inflation, for price trend analysis and forecasting, and for contract escalation. The 2024 survey determined the top 3 uses to be for price trend analysis and forecasting (55 percent), as a general indicator of inflation (45 percent), and for comparative price analysis (44 percent), while more than a quarter of data users (28 percent) cited using the PPI for contract price adjustment. These results indicate little change in how PPI data is used today versus in 2013, although it is reasonable to assume that increased use of PPI data for price trend analysis and forecasting is due to greater and more detailed PPI coverage of the U.S. economy.

Results from the 2013 survey indicated that most users were using the BLS website, the BLS News Service email subscription, and the Department of Labor (DOL) website to access PPI data. The 2024 survey found that most users were using the BLS website, other federal statistics websites, and the DOL website to access PPI data, while use of the BLS News Service email subscription decreased by more than two-thirds since the 2013 survey. While these findings illustrate minor change overall in how PPI data is being accessed today versus in 2013, the results do demonstrate an increased use of website sources amongst users.

The 2024 PPI User Survey results build upon the insights gained from the 2013 survey, demonstrating the evolving needs of PPI data users and the persistent use of PPI data through technological advancements and economic expansion over the past decade. The results of this survey will be used to help identify areas of emphasis for BLS in the future.

[1] Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

[2] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[3] PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

[4] Trade indexes measure changes in margins received by wholesalers and retailers.

[5] The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

[6] Distributive services include transportation, warehousing, and trade of goods.

[7] Includes intermediate trade, transportation, and warehousing services.

[8] Includes crude petroleum.

[9] Excludes crude petroleum.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[2] Seasonal tests did not indicate the presence of seasonality. Data shown is not seasonally adjusted.

[3] Trade indexes measure changes in margins received by wholesalers and retailers.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[2] PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

[3] Trade indexes measure changes in margins received by wholesalers and retailers.

[4] The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

[5] Distributive services include transportation, warehousing, and trade of goods.

[6] Includes intermediate trade, transportation, and warehousing services.

[7] Includes crude petroleum.

[8] Excludes crude petroleum.

[1] Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

[2] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[3] PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

[4] Trade indexes measure changes in margins received by wholesalers and retailers.

[5] The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

[6] Distributive services include transportation, warehousing, and trade of goods.

[7] Includes intermediate trade, transportation, and warehousing services.

[8] Includes crude petroleum.

[9] Excludes crude petroleum.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[2] PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

[3] Trade indexes measure changes in margins received by wholesalers and retailers.

[4] The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

[5] Distributive services include transportation, warehousing, and trade of goods.

[6] Includes intermediate trade, transportation, and warehousing services.

[7] Includes crude petroleum.

[8] Excludes crude petroleum.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[2] Due to incomplete coverage of the services sector, some services indexes in this table reflect only a portion of their wherever-provided output. These indexes are flagged using the term "partial" at the end of their titles. For more information regarding wherever-provided services indexes, go to https://www.bls.gov/ppi/wepnotice.htm. This webpage includes methodology documentation, a table identifying missing coverage areas for those indexes with incomplete coverage, and a concordance table between wherever-provided services indexes and Census product codes.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

[2] Due to incomplete coverage of the services sector, some services indexes in this table reflect only a portion of their wherever-provided output. These indexes are flagged using the term "partial" at the end of their titles. For more information regarding wherever-provided services indexes, go to https://www.bls.gov/ppi/wepnotice.htm. This webpage includes methodology documentation, a table identifying missing coverage areas for those indexes with incomplete coverage, and a concordance table between wherever-provided services indexes and Census product codes.

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[2] Due to incomplete coverage of the services sector, some services indexes in this table reflect only a portion of their wherever-provided output. These indexes are flagged using the term "partial" at the end of their titles. For more information regarding wherever-provided services indexes, go to https://www.bls.gov/ppi/wepnotice.htm. This webpage includes methodology documentation, a table identifying missing coverage areas for those indexes with incomplete coverage, and a concordance table between wherever-provided services indexes and Census product codes.

[1] Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

[2] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[1] Industry and product class indexes may include products not shown separately.

[2] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[3] The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.

[1] Industry and product class indexes may include products not shown separately.

[2] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[3] The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.

Copper and copper products: 10210201, 102301, 102403, 102502, 10260314, and 102807013

Machinery and motive products: 11 and 14

Machinery and equipment except electrical: 111, 112, 113, 114, 115, 116, 118, and 119

Agriculture machinery, including tractors: 1114 less 111409

Metalworking machinery: 113A, 113304, 1137, and 1138

Total tractors: 111410 and 112A less 112A03

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111409

Agricultural machinery, excluding tractors (old commodity code 1112): 1114 less 111403

Pharmaceutical preparations for human and veterinary use: 0634 and 0638

Pharmaceuticals for human use, prescription: prescription pharmaceutical price quotes from 0638

Pharmaceuticals for human use, non-prescription: non-prescription pharmaceutical price quotes from 0638

Health care services, Medicare patients: Medicare price quotes from 511 and 512

Health care services, Medicaid patients: Medicaid price quotes from 511 and 512

Health care services, private insurance patients: Private insurance price quotes from 511 and 512

Health care services, all other patients: Price quotes from 511 and 512, less Medicare, Medicaid, and private insurance

[1] All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents.

[2] Trade indexes measure changes in margins received by wholesalers and retailers.

[3] PPI data for these Net Inputs to Industry Indexes are organized by Bureau of Economic Analysis (BEA) Industry code. The set of products included in an industry input index and the weights for each commodity included in the index are derived from the BEA's Input-Output Accounts Use of Commodities by Industry table in conjunction with U.S. Census Bureau revenue data. Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of most industries in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2023, the PPI covered 69 percent of services as measured by 2017 Census revenue, and 17 percent of construction.

More than 44,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2025, final demand goods were about 29.1 percent of overall final demand, final demand services were roughly 68.3 percent, and final demand construction was about 2.6 percent of final demand. Within intermediate demand, coverage of services for intermediate demand has resulted in about a 55 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4 intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see **www.bls.gov/ppi/fd-id/ppi-intermediate-demand-by-production-flow-industry-stage-assignments.htm.**

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the CPI includes property insurance premiums paid by consumers, while the PPI includes both the premiums paid by consumers as well as the return earned on the invested portion of those premiums. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at **www.bls.gov/opub/mlr/**.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted online via the BLS Internet Data Collection Facility (IDCF). Data provided by survey respondents are supplemented with data from other sources for some areas.

Price data are provided by survey respondents on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes, not actual prices. All PPIs are subject to monthly revisions up to 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Information on these resampling efforts are noted in the *PPI News Release* and *PPI Detailed Report* in the months they occur.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2017 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2018 to December 2022, PPI weights were derived from 2012 shipment values. Industry indexes now are calculated under the 2022 NAICS structure utilizing 2017 value of shipment weights and 2017 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base

for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see the Producer Price Indexes section of the *BLS Handbook of Methods*. This section is available on the BLS Web site at **www.bls.gov/opub/hom/ppi**.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from $100 in November 2009 to $105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Producer Price Index (PPI) Guide for Price Adjustment*, on the Web at: **www.bls.gov/ppi/publications/price-adjustment-guide-for-contracting-parties.htm.**

Seasonal adjustment is accomplished using X-13 ARIMA, a software package published by the U.S. Census Bureau. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the COVID-19 pandemic. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of over 350 seasonally adjusted commodity series, 60 were subject to intervention in 2026.

For more information relating to seasonal adjustment methods, see "PPI and CPI Seasonal Adjustment: an Update" in the July 2010 *Monthly Labor Review*, and "PPI and CPI Seasonal Adjustment During the COVID-19 Pandemic" in the May 2022 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to the internet. There were more than 21 million instances of PPI data being downloaded from the BLS website during 2025.

Retrieving PPI data from the PPI Web site

PPI data are available online at **www.bls.gov/ppi/databases**. On this page, links provide the following methods of data retrieval:

- ***Top Picks*** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- ***Data Finder***, also known as the "Data Query Tool", allows users to conveniently search multiple data sets all at once. Users can extract specific data by searching by keyword or by filtering through multiple topics, measures, and attributes. Users can modify the date range and output options after executing the query using the choices provided above the data output.

- ***One-Screen Data Search*** *and* ***Multi-Screen Data Search*** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.

- ***Series Report*** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

Commodity code	*Provides data for:*
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpufd4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a "wdu" prefix (not seasonally adjusted) or a "wds" prefix (seasonally adjusted) with a commodity code.

Commodity code	*Provides data for:*
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix "pcu." After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code, current NAICS series	*Provides data for:*
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a "pdu" prefix and "#" between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

Industry-product code, discontinued SIC series	*Provides data for:*
pdu28__#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix "ndu". After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

Industry-product code, discontinued NAICS series	*Provides data for*
ndu212231212231	Lead and zinc ore mining
ndu2122312122312	Lead, zinc concentrates
ndu212231212231214	Lead concentrates
