## CONSUMER PRICE INDEX: FEBRUARY 2007

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.5 percent in February, before seasonal adjustment, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The February level of 203.499 (1982-84=100) was 2.4 percent higher than in February 2006.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.5 percent in February, prior to seasonal adjustment. The February level of 198.544 (1982-84=100) was 2.2 percent higher than in February 2006.

The Chained Consumer Price Index for All Urban Consumers (C-CPI-U) increased 0.5 percent in February on a not seasonally adjusted basis. The February level of 118.021 (December 1999=100) was 2.2 percent higher than in February 2006. Please note that the indexes for the post-2005 period are subject to revision.

### CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U advanced 0.4 percent in February, following a 0.2 percent increase in January. Energy costs increased 0.9 percent in February after declining 1.5 percent in January. In February, the index for petroleum-based energy increased 0.3 percent and the index for energy services rose 1.5 percent. The food index rose 0.8 percent in February, following a 0.7 percent increase in January. Grocery store foods rose 1.1 percent, largely reflecting a 4.7 percent increase in the index for fruits and vegetables. The index for all items less food and energy advanced 0.2 percent in February, following a 0.3 percent rise in January; an increase in the index for shelter accounted for about one-half of the February advance.

Table A. Percent changes in CPI for Urban Consumers (CPI-U)

Expenditure Category	Seasonally adjusted								Un-adjusted 12-mos. ended Feb.'07
	Changes from preceding month							Compound annual rate 3-mos. ended Feb.'07	
	2006					2007			
	Aug.	Sep.	Oct.	Nov.	Dec.	Jan.	Feb.		
All Items	.3	-.5	-.4	.0	.4	.2	.4	4.0	2.4
Food and beverages	.3	.4	.3	-.1	-.1	.7	.8	5.9	3.1
Housing	.3	.3	.0	.4	.4	.2	.4	4.2	3.3
Apparel	.6	.5	-.5	-.1	.2	.3	.5	4.1	2.1
Transportation	.2	-4.1	-3.0	-8	1.7	-8	.1	3.8	-.6
Medical care	.4	.3	.3	.2	.2	.8	.5	6.0	4.3
Recreation	.0	-.1	.1	.1	-.3	.1	.0	-.9	.9
Education and communication	.3	.1	.2	-.2	.2	-.1	.3	1.5	2.0
Other goods and services	.3	.5	.2	.1	.6	.8	.2	6.8	3.6
Special indexes:									
Energy	.4	-7.3	-6.7	-.2	4.2	-1.5	.9	14.9	-1.0
Food	.3	.4	.3	-.1	.0	.7	.8	6.1	3.1
All items less food and energy	.2	.2	.1	.1	.1	.3	.2	2.6	2.7

The food and beverages index rose 0.8 percent in February. The index for food at home increased 1.1 percent, following a 0.9 percent increase in January. Over three-fifths of the February advance was attributable to a 4.7 percent increase in the index for fruits and vegetables. Anticipated smaller citrus crops for the 2006-07-season were exacerbated by adverse weather conditions in January on the West coast, resulting in sharply higher citrus prices--up 16.3 percent in February. Overall, the indexes for fresh fruits and for fresh vegetables each increased 5.7 percent, and the index for processed fruits and vegetables rose 0.6 percent. Breakfast cereal prices rose 3.3 percent in February after declining 2.4 percent in January, largely accounting for the 1.1 percent increase in the index for cereal and bakery products. The index for meats, poultry, fish, and eggs, which advanced 0.8 percent in January, increased 0.4 in February. Beef prices increased 1.3 percent, while the indexes for pork and for other meats declined 0.6 and 2.9 percent, respectively. Prices for poultry products rose 0.8 percent and prices for fish and seafood increased 0.4 percent. The index for eggs rose sharply for the fourth consecutive month--up 8.0 percent in February and has advanced 29.1 percent in the last 12 months. The index for other food at home increased 0.3 percent and the indexes for dairy products and for nonalcoholic beverages each rose 0.2 percent. The other two components of the food and beverages index--food away from home and alcoholic beverages--increased 0.4 and 0.7 percent, respectively.

The index for housing rose 0.4 percent in February, following a 0.2 percent increase in January. The index for fuels and utilities, which rose 0.3 percent in January, increased 1.2 percent in February, reflecting upturns in the indexes for fuel oil and for natural gas. The index for fuel oil rose 0.5 percent in February, following a 5.6 percent decline in January. The index for natural gas, which declined 3.0 percent in January, advanced 5.0 percent in February. Charges for electricity were virtually unchanged in February after advancing 2.0 percent in January. The index for shelter increased 0.3 percent in February, the same as in each of the preceding two months. Within shelter, the index for rent rose 0.4 percent; owners' equivalent rent increased 0.3 percent; and the index for lodging away from home rose 0.1 percent. (Prior to seasonal adjustment, the index for lodging away from home increased 4.1 percent.) The index for household furnishings and operations, which declined 0.3 percent in January, rose 0.2 percent in February.

The transportation index rose 0.1 percent in February, following a 0.8 percent decrease in January. The index for gasoline prices, which declined 3.0 percent in January, rose 0.3 percent in February. Gasoline prices were 1.4 percent lower than a year ago and 23.7 percent lower than their peak level recorded in July 2006. The index for new vehicles declined 0.1 percent in February and was 1.4 percent lower than in February 2006. (As of February, about 88 percent of the new vehicle sample was represented by 2007 models. The 2007 models will continue to be phased in, with appropriate adjustments for quality change, over the next several months as they replace old models at dealerships.) The index for used cars and trucks decreased 0.5 percent in February. The index for public transportation rose 0.3 percent in January, reflecting a 0.9 percent increase in the index for airline fares.

The index for apparel rose 0.5 percent in February, following a 0.3 percent increase in January. (Prior to seasonal adjustment, apparel prices rose 2.6 percent, reflecting the introduction of spring-summer wear. Prices for women's apparel registered the largest advance--up 4.9 percent.)

Medical care costs rose 0.5 percent in February and are 4.3 percent higher than a year ago. The index for medical care commodities--prescription drugs, nonprescription drugs, and medical supplies--decreased 0.3 percent. The index for medical care services advanced 0.7 percent. The indexes for professional services and for hospital and related services increased 0.7 and 0.6 percent, respectively.

The index for recreation was virtually unchanged in February. Increases in the indexes for pets, pet products and services and for recreational reading materials--up 0.8 and 0.3 percent, respectively--offset declines in the indexes for video and audio, for sporting goods, for photography, and for toys.

The index for education and communication increased 0.3 percent in February. Educational costs increased 0.6 percent and communication costs rose 0.1 percent. Within the communication group, the index for information and information processing rose 0.1 percent as a 0.2 percent increase in telephone services more than offset small decreases in the indexes for personal computers and peripheral equipment, for computer software and accessories and for internet services and electronic information providers.

The index for other goods and services increased 0.2 percent in February. The index for tobacco and smoking products registered its third consecutive large advance--up 1.0 percent in February--and accounted for virtually all of the increase in this major group.

### **CPI for Urban Wage Earners and Clerical Workers (CPI-W)**

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers increased 0.4 percent in February.

Consumer Price Index data for March are scheduled for release on Tuesday, April 17, 2007, at 8:30 A.M. (EDT).

## **Consumer Price Index Levels to Three Decimal Places**

Effective with this release of the Consumer Price Index (CPI), the Bureau of Labor Statistics has begun computing percent changes based upon three decimal place indexes rather than one decimal place indexes. This change applies to the All Items Consumer Price Index and all component indexes for the CPI-U, CPI-W, and C-CPI-U, for the U.S. City Average and for all other published areas. In addition, CPI index values are displayed to three decimal places in all paper and electronic publications. As in the past, percent changes are rounded to one decimal place.

This change in procedure addresses a rounding issue that has resulted in published percent changes that are 0.1 percentage point higher or lower than the same percent changes based on unrounded index values (i.e., indexes to three or more decimal places). These differences can be particularly important when percent changes are very small. Publishing the index values to three decimal places, and using these values to compute percent changes, essentially eliminates the rounding differences. This change only affects the presentation of the index data. Index values continue to be calculated from underlying price data in the same manner as in the past, and no systematic upward or downward effect on the data is introduced. The levels of future indexes will be affected only in that they will be published to three decimal places rather than one. Official CPI data previously published will not be revised.

For more information contact Patrick Jackman or Ken Stewart either by telephone at (202) 691-6952 and (202) 691-6966, respectively, or by electronic mail at [Jackman.Patrick@bls.gov](mailto:Jackman.Patrick@bls.gov) or [Stewart.Ken@bls.gov](mailto:Stewart.Ken@bls.gov)

## **Note on Sampling Error in the Consumer Price Index**

The CPI is a statistical estimate that is subject to sampling error because it is based upon a sample of retail prices and not the complete universe of all prices. BLS calculates and publishes estimates of the 1-month, 2-month, 6-month and 12-month percent change standard errors annually, for the CPI-U. These standard error estimates can be used to construct confidence intervals for hypothesis testing. For example, the estimated standard error of the 1 month percent change is 0.06 percent for the U.S. All Items Consumer Price Index. This means that if we repeatedly sample from the universe of all retail prices using the same methodology, and estimate a percentage change for each sample, then 95% of these estimates would be within 0.12 percent of the 1 month percentage change based on all retail prices. For a 1-month change of 0.2 percent in the All Items CPI for All Urban Consumers, we are 95 percent confident that the actual percent change based on all retail prices would fall between 0.08 and 0.32 percent. For the latest data, including information on how to use the estimates of standard error, see "Variance Estimates for Changes in the Consumer Price Index, January 2005- December 2005 in the CPI Detailed Report, February 2006. These data are available on the CPI home page (<http://www.bls.gov/cpi>), using the following link <http://www.bls.gov/cpi/cpivar2006.pdf>

## **Facilities for Sensory Impaired**

Information from this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, Federal Relay Services: 1-800-877-8339. For a recorded message of Summary CPI data, call (202) 691-5200.

## **Brief Explanation of the CPI**

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) the CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include in addition to wage earners and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights, which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period. For the C-CPI-U data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and subject to two annual revisions.

The index measures price change from a designed reference date. For the CPI-U and the CPI-W the reference base is 1982-84 equals 100.0. The reference base for the C-CPI-U is December 1999 equals 100. An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details visit the CPI home page on the Internet at <http://www.bls.gov/cpi/> or contact our CPI Information and Analysis Section on (202) 691-7000.

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

### Index Point Change

CPI	202.416
Less previous index	201.800
Equals index point change	.616

### Percent Change

Index point difference	.616
Divided by the previous index	201.800
Equals	0.003
Results multiplied by one hundred	0.003x100
Equals percent change	0.3

### Regions Defined

The states in the four regions shown in Tables 3 and 6 are listed below.

The Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

The Midwest--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The South--Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia, and the District of Columbia.

The West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

## **A Note on Seasonally Adjusted and Unadjusted Data**

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. Seasonally adjusted indexes and seasonal factors are computed annually. Each year, the last 5 years of seasonally adjusted data are revised. Data from January 2002 through December 2006 were replaced in January 2007. Exceptions to the usual revision schedule were: the updated seasonal data at the end of 1977 replaced data from 1967 through 1977; and, in January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the [CPI Detailed Report](#).

The seasonal movement of All items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used in the aggregation of the dependent series for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 44 of the 73 components are seasonally adjusted for 2007.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

In January 2007, BLS adjusted 37 series using Intervention Analysis Seasonal Adjustment, including selected food and beverage items, fuel oil, motor fuels, vehicles, jewelry, admission to sporting events and educational books and supplies. For example, this procedure was used for the Motor fuel series to offset the effects of damage to oil refineries from Hurricane Katrina, as well as the effects of implementing new fuel requirements in the United States.

For a complete list of Intervention Analysis Seasonal Adjustment series and explanations, please refer to the article “Intervention Analysis Seasonal Adjustment”, located on our website at:  
<http://www.bls.gov/cpi/cpisapage.htm>.

For additional information on seasonal adjustment in the CPI, please write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or contact Jeff Wilson on (202) 691-6968 by e-mail at [Wilson.Jeff@bls.gov](mailto:Wilson.Jeff@bls.gov). If you have general questions about the CPI, please call our information staff at (202) 691-7000.

**Table 1. Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, by expenditure category and commodity and service group**

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

- M - Every month.
- 1 - January, March, May, July, September, and November.
- 2 - February, April, June, August, October, and December.

<sup>2</sup> Regions defined as the four Census regions. See technical notes.

<sup>3</sup> Indexes on a December 1996=100 base.

<sup>4</sup> Indexes on a December 1986=100 base.

<sup>5</sup> In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ; Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA;

Tampa-St. Petersburg-Clearwater, FL.

<sup>6</sup> Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

<sup>2</sup> Regions defined as the four Census regions. See technical notes.

<sup>3</sup> Indexes on a December 1996=100 base.

<sup>4</sup> Indexes on a December 1986=100 base.

<sup>5</sup> In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ; Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA;

Tampa-St. Petersburg-Clearwater, FL.

<sup>6</sup> Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.
