

## Highlights of women's earnings in 2013

In 2013, women who were full-time wage and salary workers had median usual weekly earnings of \$706. On average in 2013, women made 82 percent of the median weekly earnings of male full-time wage and salary workers (\$860). In 1979, the first year for which comparable earnings data are available, women earned 62 percent of what men earned. (See chart 1 and tables 1 and 12.)

This report presents earnings data from the Current Population Survey (CPS), a national monthly survey of approximately 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics (BLS). Information on earnings is collected from one-fourth of the CPS sample each month. It is important to

note that the comparisons of earnings in this report are on a broad level and do not control for many factors that can be significant in explaining earnings differences. See the accompanying technical notes section for more information, including a description of the source of the data and an explanation of the concepts and definitions used in this report.

### Earnings of full-time workers

Below are data highlights for women and men who work full time, with sections focusing on characteristics such as age, race and ethnicity, education, occupation, and more.

#### Age

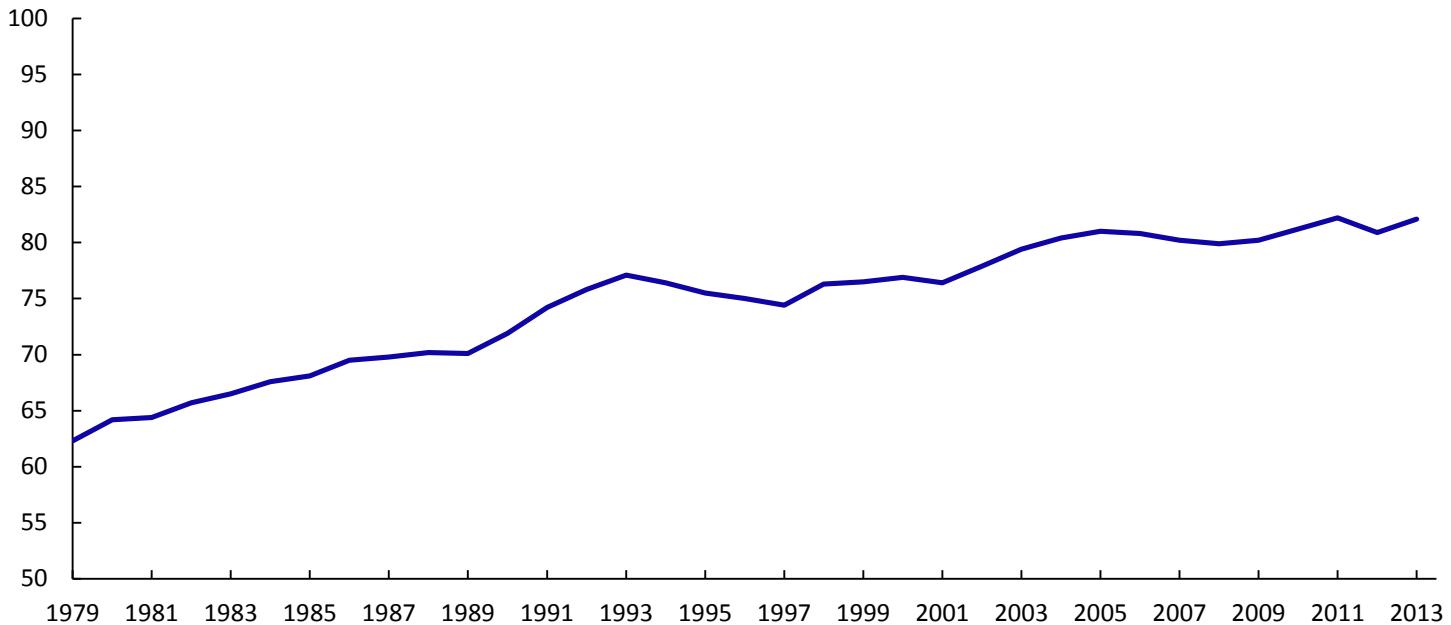

Median weekly earnings were highest for women age 35 to 64 in 2013, with little difference in the earnings of 35- to 44-year-olds (\$767), 45- to 54-year-olds (\$761), and 55- to 64-year-olds (\$779). Among men, workers who were age

**Chart 1****Women's earnings as a percentage of men's, for full-time wage and salary workers,  
1979–2013 annual averages**

In percent

Note: Percentages are calculated from annual averages of median usual weekly earnings for full-time wage and salary workers.

Source: U.S. Bureau of Labor Statistics.

45 to 64 had the highest earnings, with 45- to 54-year-olds (\$994) making about the same as 55- to 64-year-olds (\$1,011). Young women and men age 16 to 24 had the lowest earnings (\$423 and \$479, respectively). (See table 1.)

Among the four age groupings of those 35 years and older, women's earnings ranged from 74 percent to 80 percent of the earnings of their male counterparts. In the younger age groups, the earnings differences between women and men were smaller, with women earning 89 to 90 percent of what men earned. (See table 1.)

Between 1979 and 2013, women's-to-men's earnings ratios rose for most age groups. Among 25- to 34-year-olds, for example, the ratio increased from 68 percent in 1979 to 89 percent in 2013, while the ratio for 45- to 54-year-olds increased from 57 percent to 77 percent. (See table 12.)

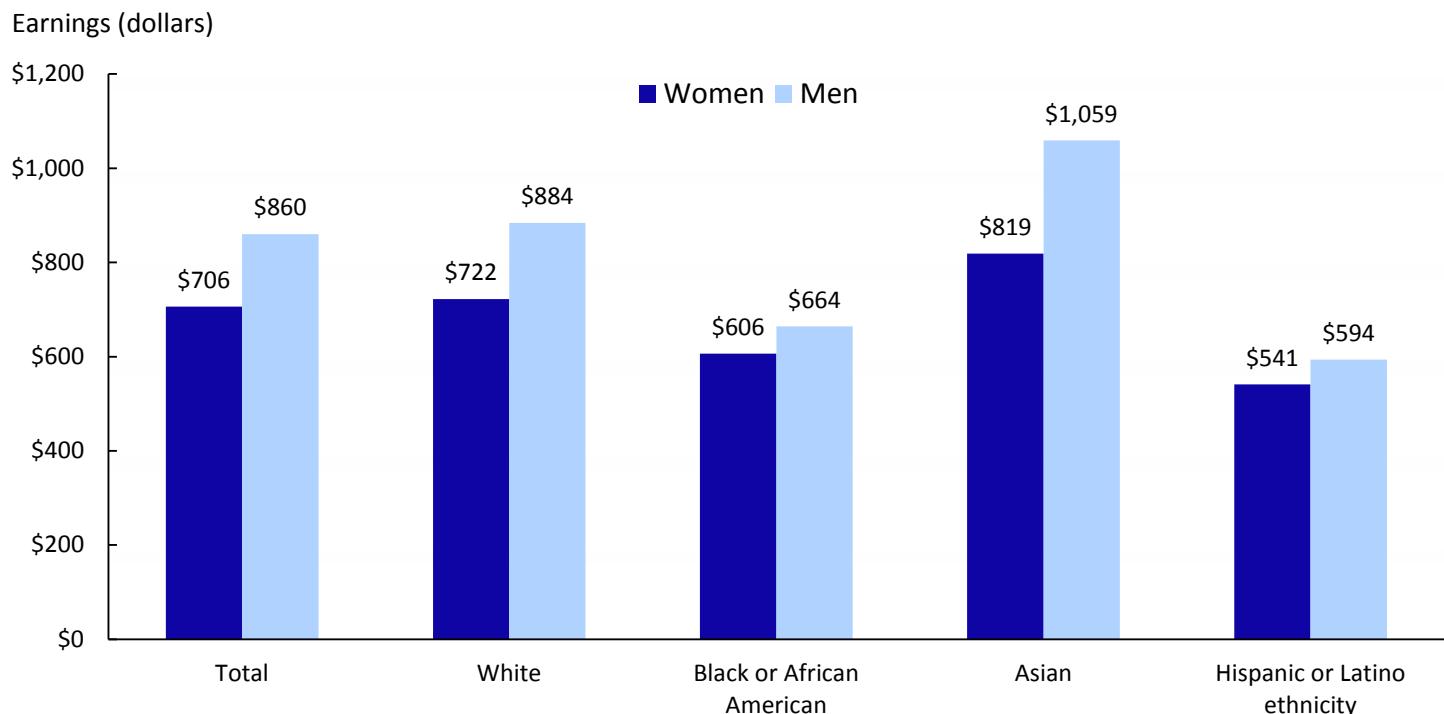

**Race and ethnicity**

Asian women and men earned more than their White, Black, and Hispanic or Latino counterparts in 2013.

Among women, Whites (\$722) earned 88 percent as much as Asian women (\$819), while Blacks (\$606) and Hispanics (\$541) earned 74 percent and 66 percent as much as their Asian counterparts, respectively. In comparison, White men (\$884) earned 83 percent as much as Asian men (\$1,059); Black men (\$664) earned 63 percent as much; and Hispanic men (\$594), 56 percent. (See chart 2 and table 1.)

Earnings differences between women and men were the most pronounced for Asians and for Whites. Asian women earned 77 percent as much as Asian men in 2013, and White women earned 82 percent as much as their male counterparts. In comparison, Black and Hispanic women had median earnings that were 91 percent of those of their male counterparts. (See table 1.)

When adjusted for inflation, women's earnings since 1979 have increased considerably across the major race and Hispanic ethnicity categories. Earnings growth has been greatest for White women, outpacing that of their Black

**Chart 2****Median usual weekly earnings of women and men who are full-time wage and salary workers, by race and Hispanic or Latino ethnicity, 2013 annual averages**

Note: People of Hispanic or Latino ethnicity may be of any race. Estimates for the race groups shown (White, Black or African American, and Asian) include Hispanics.

Source: U.S. Bureau of Labor Statistics.

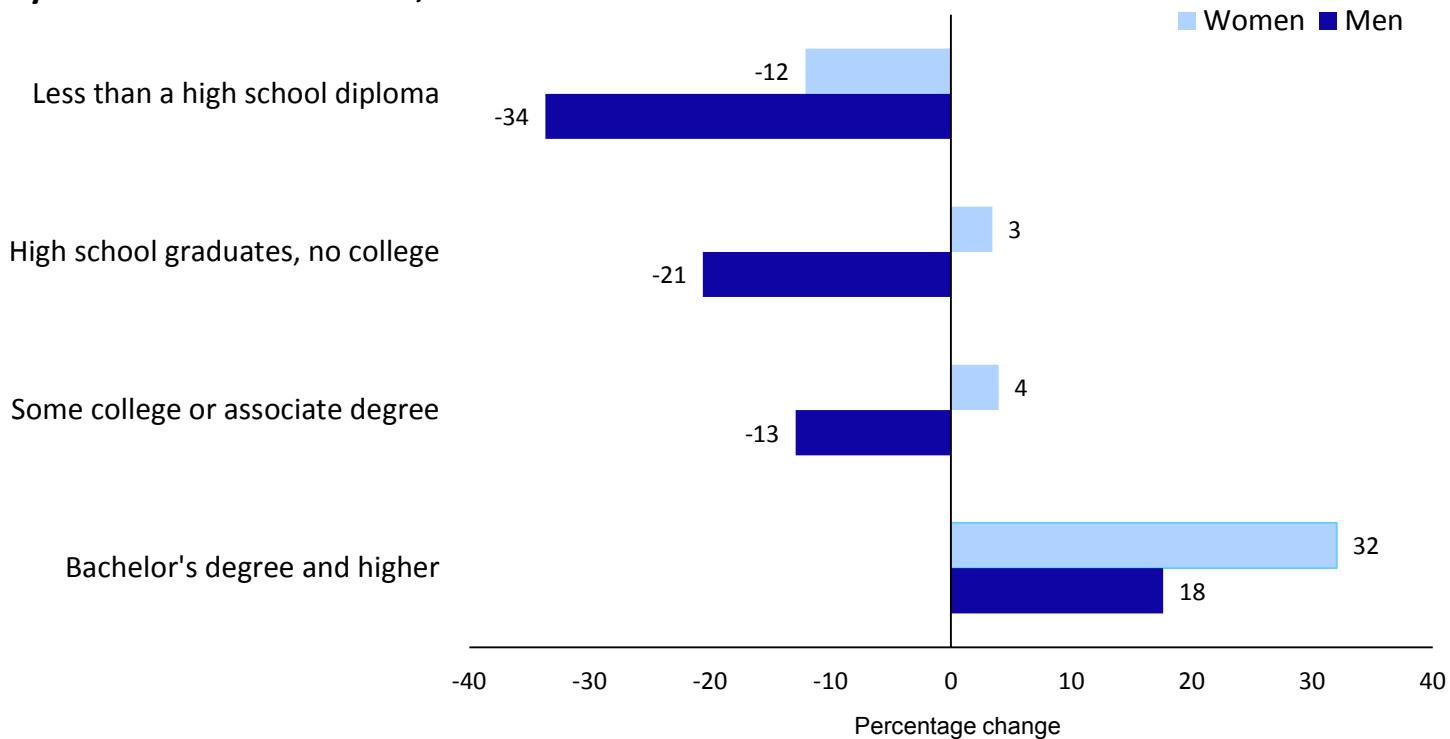

and Hispanic counterparts. Between 1979 and 2013, inflation-adjusted earnings (also called constant-dollar earnings) rose by 31 percent for White women, compared with an increase of 20 percent for Black women and 15 percent for Hispanic women. In contrast, inflation-adjusted earnings for White and Black men declined slightly (1 percent and 2 percent, respectively) from 1979 to 2013, and Hispanic men's earnings fell by 9 percent. (See table 18.) Asians were not included in this analysis because comparable data for the group are not available until 2003. (See note in table 18.)

### Education

Median weekly earnings vary significantly by level of educational attainment. Among all workers age 25 and older, the weekly earnings of those without a high school diploma (\$472) were two-fifths of those with a bachelor's degree or higher (\$1,194) in 2013. For workers with a

high school diploma who had not attended college (\$651), median earnings were a little more than half of those with a bachelor's degree or higher. Earnings for those with some college or an associate's degree (\$748) were just under two-thirds of what workers with a bachelor's degree or more made. (See table 1.)

At each level of education, women have fared better than men with respect to earnings growth. Although both women and men without a high school diploma have experienced declines in inflation-adjusted earnings since 1979, the drop for women was much smaller than that for men: a 12-percent decrease for women as opposed to a 34-percent decline for men. On an inflation-adjusted basis, earnings for women with a bachelor's degree or higher have increased by 32 percent since 1979, while those of their male counterparts have risen by 18 percent. (Data pertain to workers age 25 and older.) (See chart 3 and table 19.)

**Chart 3****Percentage change in inflation-adjusted median usual weekly earnings of women and men, by educational attainment, 1979–2013**

Note: Data relate to earnings of full-time wage and salary workers, 25 years and older.

Source: U.S. Bureau of Labor Statistics.

## Occupation

Among both women and men, median weekly earnings for those working full time in management, business, and financial operations jobs were higher than in any other major occupational category in 2013 (\$1,049 for women and \$1,412 for men). Of women in management, business, and financial operations occupations, those who were chief executives and computer and information systems managers had the highest median weekly earnings (\$1,811 and \$1,549, respectively).

Among men in this job group, chief executives and architectural and engineering managers had the highest earnings (\$2,266 and \$1,898, respectively). The second highest paying major occupational category for women and men was professional and related occupations (\$944 for women and \$1,295 for men). Among women in professional and related occupations, those who were pharmacists (\$1,802) and lawyers (\$1,566) had the highest earnings. For men in professional and related

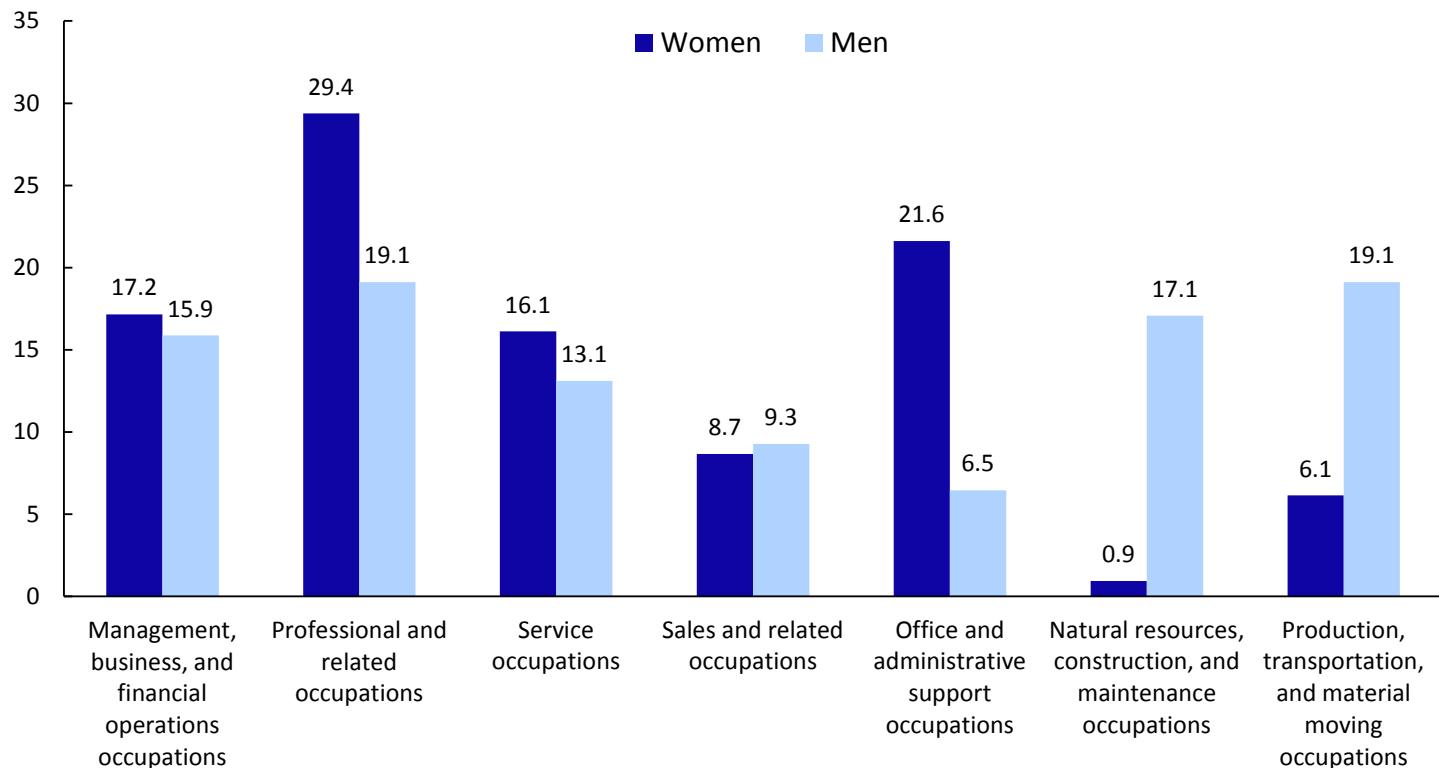

occupations, those who were pharmacists (\$2,092), physicians and surgeons (\$2,087), and lawyers (\$1,986) earned the most. (See table 2.)

The occupational distributions of female and male full-time workers differ considerably. Compared with men, relatively few women work in construction, production, or transportation occupations, and women are far more concentrated in office and administrative support jobs. (See table 2.)

Women are more likely than men to work in professional and related occupations. In 2013, 29 percent of women worked in professional and related occupations, compared with 19 percent of men. Within this occupational category, though, the proportion of women employed in the higher paying job groups is much smaller than the proportion of men employed in them. In 2013, 9 percent of women in professional and related occupations were employed in the relatively high-paying computer and

**Chart 4****Distribution of full-time wage and salary employment for women and men, by major occupational group, 2013 annual averages**

Percentage of total employment

Source: U.S. Bureau of Labor Statistics.

engineering fields, compared with 44 percent of men. Women in professional and related occupations were more likely to work in education and healthcare jobs, in which the pay is generally lower than that for computer and engineering jobs. Sixty-nine percent of women in professional occupations worked in education and healthcare jobs in 2013, compared with 30 percent of men. (See chart 4 and table 2.)

**Earnings among parents**

In 2013, a little more than one-third of full-time wage and salary workers were parents of children under age 18 (36 percent of women and 37 percent of men). Among women, median weekly earnings for mothers of children under age 18 (\$701) were essentially the same as earnings for women without children under 18 (\$708). Among men, earnings for fathers with children under 18 were \$950, compared with \$804 for men without children under 18. (See table 7.)

**State of residence**

Median weekly earnings and women's-to-men's earnings ratios vary by state of residence. (In this section, "state" refers to the 50 states and the District of Columbia.) The differences among the states reflect, in part, variation in the occupations and industries found in each state and differences in the demographic composition of each state's labor force. In general, the sampling error for the state estimates is considerably larger than it is for the national estimates; thus, comparisons of state estimates should be made with caution. In addition, it should be noted that while earnings are shown based on workers' state of residence, their reported earnings may or may not be from a job located in the same state. (See table 3.)

**Weekly work hours**

Among full-time workers (that is, those working at a job 35 hours or more per week), men are more likely than women

to have a longer workweek. Twenty-five percent of men worked 41 or more hours per week in 2013, compared with 14 percent of women who did so. Women were more likely than men to work 35 to 39 hours per week: 12 percent of women worked those hours in 2013, while 5 percent of men did. A large majority of both male and female full-time workers had a 40-hour workweek; among these workers, women earned 90 percent as much as men earned. (People who usually work 35 or more hours per week but whose hours vary were excluded from this analysis.) (See table 5.)

### Earnings of part-time workers

Women are more likely than men to work part time—that is, less than 35 hours per week on a sole or principal job. Women who worked part time made up 26 percent of all female wage and salary workers in 2013. In contrast, 13 percent of men in wage and salary jobs worked part time. (See tables 4 and 5.)

Women and men who worked part time had fairly similar median earnings. Median weekly earnings for female part-timers were \$241 in 2013, slightly above the \$230 median for their male counterparts. (See table 4.)

Men who work part time tend to be younger than women who work part time. In 2013, 43 percent of male part-time

workers were 16 to 24 years old, compared with 29 percent of female part-time workers. (See table 4.)

### Earnings of workers paid by the hour

Sixty-two percent of women and 56 percent of men employed in wage and salary jobs were paid by the hour in 2013. Women who were paid hourly rates had median hourly earnings of \$12.12, which was 87 percent of the median for men paid by the hour (\$14.00). (See tables 8 and 11.)

Among workers who were paid hourly rates in 2013, 5 percent of women and 3 percent of men had hourly earnings at or below the prevailing federal minimum wage of \$7.25. (See table 10.)

Among both women and men, hourly paid workers age 16 to 19 were the most likely to have earnings at or below the minimum wage. Twenty percent of teenage workers who were paid hourly rates earned the prevailing federal minimum wage or less in 2013, compared with just 3 percent of hourly paid workers age 25 and older. Eight percent of workers age 20 to 24 had earnings at or below the minimum wage. (See table 10.) See the technical notes section for information about estimating the number of minimum wage workers.

<sup>1</sup> Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of workers by occupation, industry, and geographic region.

<sup>2</sup> Data refer to members of a labor union or an employee association similar to a union.

<sup>3</sup> Data refer to both union members and workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

Note: In general, the sampling error for the state estimates is considerably larger than it is for the national estimates; thus, comparisons of state estimates should be made with caution. Data shown are based on workers' state of residence; workers' reported earnings, however, may or may not be from a job located in the same state.

<sup>1</sup> Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of workers by occupation, industry, and geographic region.

<sup>2</sup> Data refer to members of a labor union or an employee association similar to a union.

<sup>3</sup> Data refer to both union members and workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

<sup>1</sup> The distinction between full- and part-time workers is based on hours usually worked. These data do not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple jobholders.

Note: See the technical notes section for information about the federal minimum wage level and estimating the number of minimum wage workers. Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

<sup>1</sup> Data for 1990-91, 1996-97, and 2007-09 reflect changes in the minimum wage that took place in those years.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). See the technical notes section for information about the federal minimum wage level and estimating the number of minimum wage workers.

| 2004..... | 80.4                            | 79.8  | 88.8                            | 76.4  | 87.3                                  |
| 2005..... | 81.0                            | 80.2  | 89.3                            | 80.6  | 87.7                                  |
| 2006..... | 80.8                            | 80.0  | 87.8                            | 79.3  | 87.1                                  |
| 2007..... | 80.2                            | 79.4  | 88.8                            | 78.1  | 91.0                                  |
| 2008..... | 79.9                            | 79.3  | 89.4                            | 78.0  | 89.6                                  |
| 2009..... | 80.2                            | 79.2  | 93.7                            | 81.8  | 89.5                                  |
| 2010..... | 81.2                            | 80.5  | 93.5                            | 82.6  | 90.7                                  |
| 2011..... | 82.2                            | 82.1  | 91.1                            | 77.4  | 90.7                                  |
| 2012..... | 80.9                            | 80.8  | 90.1                            | 73.0  | 88.0                                  |
| 2013..... | 82.1                            | 81.7  | 91.3                            | 77.3  | 91.1                                  |

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). The women's-to-men's earnings ratios shown here are calculated from the current-dollar median usual weekly earnings of full-time wage and salary workers in table 23. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

| 2011..... | 81.0                      | 80.9                            | 76.9                              | 76.8                             | 74.9                         |
| 2012..... | 79.9                      | 76.0                            | 76.3                              | 76.9                             | 73.0                         |
| 2013..... | 81.1                      | 80.0                            | 78.3                              | 76.6                             | 74.8                         |

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). The women's-to-men's earnings ratios shown here are calculated from the current-dollar median usual weekly earnings of full-time wage and salary workers 25 years and older in table 24.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information on historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). The women's-to-men's earnings ratios shown here are calculated from the current-dollar median hourly earnings of workers paid hourly rates in table 25.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). The women's-to-men's earnings ratios shown here are calculated from the current-dollar median hourly earnings of wage and salary workers paid hourly rates in table 26. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main

## HIGHLIGHTS OF WOMEN'S EARNINGS IN 2013

---

race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical

Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section. Dash indicates data not available.

## HIGHLIGHTS OF WOMEN'S EARNINGS IN 2013

---

Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at [www.bls.gov/cps/documentation.htm#comp](http://www.bls.gov/cps/documentation.htm#comp). As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more

## HIGHLIGHTS OF WOMEN'S EARNINGS IN 2013

---

than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000-2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

# Technical Notes

The estimates in this report were obtained from the Current Population Survey (CPS), which provides information on the labor force, employment, and unemployment. The survey is conducted monthly for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau using a scientifically selected national sample of about 60,000 eligible households representing all 50 states and the District of Columbia. The survey also provides data on earnings, which are based on one-fourth of the CPS monthly sample and are limited to wage and salary workers. All self-employed workers, both incorporated and unincorporated, are excluded from the data presented in this report.

It is important to note that the comparisons of earnings in this report are on a broad level and do not control for many factors that can be significant in explaining earnings differences. This includes the direct comparisons of earnings levels among demographic groups discussed in the narrative and the women's-to-men's earnings ratios shown in the tables (that is, women's earnings as a percentage of men's). For example, the overall ratio of women's-to-men's earnings for full-time workers presented here is not controlled for differences in important determinants of earnings such as age, occupation, and educational attainment. Readers should not construe the earnings comparisons in this report as being restricted to workers with otherwise comparable characteristics and comparable jobs. One must be cautious even when attempting to control for one of the important factors that may explain earnings differences. Comparisons of women's and men's earnings by detailed occupation, for example, are not simultaneously controlled for differences in key factors such as job skills and responsibilities, work experience, and specialization.

Material in this report is in the public domain and may be used without permission. This information is available to sensory-impaired individuals upon request. Voice telephone: (202) 691-5200; Federal Relay Service: 1 (800) 877-8339.

## Concepts and definitions

The principal concepts and definitions used in connection with the earnings data in this report are described briefly below.

*Wage and salary workers.* These are workers age 16 and older who receive wages, salaries, commissions, tips, payments in kind, or piece rates on their sole or principal job. This group includes employees in both the public and private sectors. All self-employed workers are excluded whether or not their businesses are incorporated.

*Full-time workers.* People who usually work 35 hours or more per week at their sole or principal job are defined as working full time for the purpose of these estimates. The federal Fair Labor Standards Act (FLSA) does not define full- or part-time employment.

*Part-time workers.* People who usually work fewer than 35 hours per week at their sole or principal job are defined as working part time for the purpose of these estimates. The federal Fair Labor Standards Act (FLSA) does not define full- or part-time employment.

*Usual weekly earnings.* The data represent earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received (at the main job in the case of multiple jobholders). Prior to 1994, respondents were asked how much they usually earned per week. Since January 1994, respondents have been asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, monthly, annually, or other) and how much they usually earn in the reported time period. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term "usual" is determined by each respondent's own understanding of the term. If the respondent asks for a definition of "usual," interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months.

*Medians of usual weekly earnings.* The earnings estimates shown in this report are medians. The median is the midpoint in a given earnings distribution, with half of workers having earnings above the median and the other half having earnings below the median.

The BLS procedure for estimating the median of a weekly earnings distribution places each reported or calculated weekly earnings value into a \$50-wide interval that is centered around a multiple of \$50. The median is calculated through the linear interpolation of the interval in which the median lies.

Changes over time in the medians for specific groups may not necessarily be consistent with the movements estimated for the overall median boundary. The most common reasons for this possible anomaly are as follows:

- There could be a change in the relative weights of the subgroups. For example, the median earnings of 16- to 24-year-olds and the median earnings of those 25 years and older may rise, but if the lower earning 16-to-24 age group accounts for a greatly increased share of the total, the overall median could actually fall.
- There could be a large change in the shape of the distribution of reported earnings, particularly near a median boundary. This change could be caused by survey observations that are clustered at rounded values, such as \$600 or \$700. An estimate lying in a \$50-wide centered interval containing such a cluster tends to change more slowly than one in other intervals. Consider, for example, the calculation of the median for a multipeaked earnings distribution that shifts over time. As such a distribution shifts, the median does not necessarily move at the same rate. Specifically, the median takes relatively more time to move through a frequently reported earnings interval, but once above the upper limit of such an interval, it can move relatively quickly to the next frequently reported interval. BLS procedures for estimating medians mitigate such irregular movements; however, users should be cautious of these effects when evaluating short-term changes in the medians and in ratios of the medians.

*Workers paid by the hour.* These are employed wage and salary workers who report that they are paid at an hourly rate on their job. Typically, workers paid an hourly wage have made up approximately three-fifths of all wage and salary workers. Estimates of workers paid by the hour

include both full- and part-time workers unless otherwise specified.

*Hourly earnings.* These data are for wage and salary workers who are paid by the hour and pertain to earnings from a person's sole or principal job. Hourly earnings for hourly paid workers do not include overtime pay, commissions, or tips received.

*Workers paid at or below the federal minimum wage.* The CPS does not include questions on whether workers are covered by the minimum wage provisions of the federal Fair Labor Standards Act (FLSA) or by individual state or local minimum wage laws. The estimates of workers paid at or below the federal minimum wage in this report are based solely on whether the hourly wage they report (which does not include overtime pay, tips, or commissions) is at or below the federal minimum wage. It should be noted that some respondents might round hourly earnings when answering survey questions. As a result, some workers might be reported as having hourly earnings above or below the federal minimum wage when in fact they earn the minimum wage.

Some workers reported as earning at or below the prevailing federal minimum wage may not in fact be covered by federal or state minimum wage laws because of exclusions and exemptions in the statutes. Thus, the presence of workers with hourly earnings below the federal minimum wage does not necessarily indicate violations of the FLSA or state statutes in cases where such standards apply.

The estimates of the number of workers with reported earnings at or below the federal minimum wage pertain only to workers who are paid hourly rates. Salaried workers and other nonhourly paid workers are excluded, even though some have earnings that, if converted to hourly rates, would be at or below the federal minimum wage. Consequently, the estimates presented in this report likely underestimate the actual number of workers with hourly earnings at or below the minimum wage. BLS does not routinely estimate the hourly earnings of workers not paid by the hour because there are data quality concerns associated with constructing such an estimate.

Regular collection of earnings data in the basic CPS began in 1979. The prevailing federal minimum wage for 1979 and later years is listed below.

| Federal minimum wage | Effective date    |
|----------------------|-------------------|
| \$2.90               | January 1, 1979   |
| \$3.10               | January 1, 1980   |
| \$3.35               | January 1, 1981   |
| \$3.80               | April 1, 1990     |
| \$4.25               | April 1, 1991     |
| \$4.75               | October 1, 1996   |
| \$5.15               | September 1, 1997 |
| \$5.85               | July 24, 2007     |
| \$6.55               | July 24, 2008     |
| \$7.25               | July 24, 2009     |

When the minimum wage has increased during a given year, the estimates of the annual average number of minimum wage workers reflect both minimum wage levels in effect during the year. For example, data for 2007 reflect the number of workers who earned the federal minimum wage of \$5.15 for January to July and the number of workers who earned the minimum wage of \$5.85 for August to December.

**Race.** In the survey process, race is determined by the household respondent. In accordance with the Office of Management and Budget guidelines, White, Black or African American, and Asian are terms used to describe a person's race. Beginning in 2003, people in these categories are those who selected that race group only. Those who identify multiple race groups are categorized as people of two or more races. Prior to 2003, people of two or more races identified one group as their main race. More information on the 2003 changes to questions on race is available at <http://www.bls.gov/cps/rvcps03.pdf>. Data for other race groups—American Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders—and for people of two or more races are included in totals but not separately identified in this report because the number of survey respondents is too small to develop estimates of sufficient quality.

**Hispanic or Latino ethnicity.** This phrase refers to people who identified themselves in the survey process as being of

Hispanic, Latino, or Spanish origin. People whose ethnicity is identified as Hispanic or Latino may be of any race and are included in estimates for the race groups (White, Black or African American, and Asian) in addition to being shown separately.

**Inflation adjustment/constant dollars.** The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant dollars for the inflation-adjusted median earnings estimates shown in this report. BLS has made numerous improvements to the Consumer Price Index (CPI) over the years. Although these improvements make the CPI more accurate, the official histories of price index series are not adjusted to reflect the improvements. Because many researchers need a historical series that measures price change consistently over time, BLS developed the CPI-U-RS to provide an estimate of the CPI that incorporates most of the methodological improvements made since 1978 into the entire series. For further information, see Kenneth J. Stewart and Stephen B. Reed, "CPI research series using current methods, 1978–98," *Monthly Labor Review*, June 1999, available at <http://www.bls.gov/opub/mlr/1999/06/cpimlr.pdf>; and "Questions and Answers: Consumer Price Index Research Series Using Current Methods," at <http://www.bls.gov/cpi/cpirsqa.pdf>.

This report uses the most recent version of the CPI-U-RS available at the time of production. Users should note that the CPI-U-RS is subject to periodic revision. As a result, the rate of inflation incorporated into the inflation-adjusted median earnings estimates in this report may differ from the rate used in previous reports in this series or in other publications.

## Reliability

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a

sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability

to obtain information on all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

Information about the reliability of data from the CPS is available at <http://www.bls.gov/cps/documentation.htm#reliability>.
