

Geographic Profile of Employment and Unemployment, 2013

U.S. Department of Labor
Thomas E. Perez, Secretary

U.S. Bureau of Labor Statistics
Erica L. Groshen, Commissioner

October 2014

Bulletin 2780

Preface

Annual data on the labor force, employment, and unemployment in states and substate areas are available from two major sources: the Current Population Survey (CPS) and the Local Area Unemployment Statistics (LAUS) program. The CPS is a sample survey of about 60,000 households nationwide conducted for the U.S. Bureau of Labor Statistics (BLS) by the Census Bureau. The LAUS program is a federal-state cooperative endeavor in which state workforce agencies prepare estimates using concepts, definitions, and estimation procedures prescribed by BLS.

This bulletin presents 2013 annual averages from the CPS for census regions and divisions; the 50 states and the District of Columbia; and 54 large metropolitan areas, 22 metropolitan divisions, and 41 principal cities. Data from the CPS differ from the official estimates produced by the individual states through the LAUS program. CPS estimates are provided herein because they are a current source of information on the demographic and economic characteristics of the labor force in subnational areas, from the same source as the official labor force data for the United States as a whole.

Tables 1 through 13 present 2013 annual average labor force estimates for census regions and divisions. Similar information for all states and the District of Columbia appears in tables 14 through 26. All of these data reflect 2010 census-based population controls.

Tables 27 through 32 display 2013 annual average rates, ratios, and percent distributions from the CPS for selected metropolitan areas, metropolitan divisions, and cities. Levels for the various labor force categories are not presented, because independent census-based population controls are not available below the state level.

Geographic definitions for the metropolitan areas and metropolitan divisions appearing in this publication reflect those first issued by the Office of Management and Budget (OMB) on June 6, 2003, with titles updated per OMB Bulletin No. 10-02, *Update of Statistical Area Definitions and Guidance on Their Uses*, dated December 1, 2009. (See appendix C.)

The data in this bulletin reflect revisions to the standards for classification of federal data by race and ethnicity that were issued by OMB on October 30, 1997. Estimates for the White, Black or African American, and Asian race groups are based on people who reported only one of those race groups. People who reported another race group or two or more races are not included in any of these categories, but are included in the totals. People whose ethnicity was identified as Hispanic or Latino may be of any race and, therefore, were classified by ethnicity as well as by race.

Tables displaying occupation and industry data reflect the coding systems used for those data in census 2000.

This bulletin was prepared in the BLS Office of Employment and Unemployment Statistics by the Division of Local Area Unemployment Statistics in collaboration with the Division of Data Development and Publications. Editorial assistance was provided by the Office of Publications and Special Studies.

Information in this bulletin is available to upon request to individuals with sensory impairments. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339. This material is in the public domain and, with appropriate credit may be reproduced without permission.

Section I. Estimates for Census Regions and Divisions	2
Tables: Census regions and divisions, 2013 annual averages:	
1. Employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status	3
2. Employment status of the civilian noninstitutional population 25 years and older, by educational attainment	10
3. Employed and unemployed persons, by full- and part-time status, sex, age, race, and Hispanic or Latino ethnicity	12
4. Employment status of the experienced civilian labor force, by occupation	16
5. Percent distribution of employed persons, by occupation, sex, race, and Hispanic or Latino ethnicity	20
6. Employment status of the experienced civilian labor force, by industry	27
7. Percent distribution of employed persons, by industry, sex, race, and Hispanic or Latino ethnicity	35
8. Employed persons, by class of worker, sex, race, and Hispanic or Latino ethnicity	49
9. Persons at work, by sex, age, race, Hispanic or Latino ethnicity, and hours of work	52
10. Persons at work 1 to 34 hours, by sex, race, Hispanic or Latino ethnicity, usual full- or part-time status, and reason for working less than 35 hours	55
11. Employed persons with a job but not at work, by sex, race, Hispanic or Latino ethnicity, and reason not at work	58
12. Unemployed persons, by sex, age, race, Hispanic or Latino ethnicity, and reason for unemployment	61
13. Unemployed persons, by sex, age, race, Hispanic or Latino ethnicity, and duration of unemployment	64
Section II. Estimates for States	67
Charts:	
1. Unemployment rates by state, 2013 annual averages	68
2. Employment–population ratios by state, 2013 annual averages	68
Tables: States, 2013 annual averages:	
14. Employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status	69
15. Employment status of the civilian noninstitutional population 25 years and older, by educational attainment	95
16. Employed and unemployed persons, by full- and part-time status, sex, age, race, and Hispanic or Latino ethnicity	101
17. Employment status of the experienced civilian labor force, by occupation	109
18. Percent distribution of employed persons, by occupation, sex, race, and Hispanic or Latino ethnicity	113
19. Employment status of the experienced civilian labor force, by industry	120

Geographic Profile of Employment and Unemployment, 2013

The Current Population Survey (CPS) is the regular monthly survey of about 60,000 households from which the national unemployment rate is derived. (See appendix A for concepts and definitions used in the CPS and appendix B for a description of the estimation procedures.)

The method for determining which annual average estimates of the labor force—by demographic characteristics (age, sex, race, and Hispanic or Latino ethnicity) and economic characteristics of the employed and unemployed—to publish in this bulletin is explained in appendix B. Table B-1 lists the minimum bases required for publication for various geographic areas.

Estimates for census regions and divisions are shown in section I; data for states are shown in section II; and limited data for metropolitan areas, metropolitan divisions, and cities are shown in section III. Estimates of levels are

not provided in section III, because population controls needed to make estimates of levels comparable with those in the other sections of this publication are not available.

Because the estimates are based on a survey rather than on a complete census of the population, they are subject to sampling error. Consequently, error ranges have been calculated in the form of 90-percent confidence intervals and displayed for the unemployment rates in the first table of sections I, II, and III. In addition, appendix B provides tables from which the sampling error ranges can be obtained for the data in other tables in sections I and II. Separate error tables are not provided for each population group (such as total, White, Black or African American, Asian, and Hispanic or Latino ethnicity). Instead, one table is used for all population groups for a given labor force characteristic, because differences in sampling errors are usually minimal.

Section I. Estimates for Census Regions and Divisions

Table 1. Census regions and divisions: employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status, 2013 annual averages

Women who maintain families	2,288	1,493	65.3	1,349	59.0	144	9.6	8.5 – 10.7

¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges. NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 2. Census regions and divisions: employment status of the civilian noninstitutional population 25 years and older, by educational attainment, 2013 annual averages

(Numbers in thousands)

¹ Employed persons are classified as full- or part-time workers on the basis of their usual weekly hours at all jobs, regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

² Includes some persons at work 35 or more hours, classified by their reason for working part time.

³ Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

¹ Less than 0.05 percent.

NOTE: Totals for broad categories include other detailed occupations not shown separately. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Excludes persons with no previous work experience.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Fewer than 500 persons.

NOTE: Totals for broad categories include other detailed industries not shown separately. Levels may not compute to displayed rates because of rounding.

¹ Less than 0.05 percent.

NOTE: Totals for broad categories include other detailed industries not shown separately. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Includes unpaid family workers.

² Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 9. Census regions and divisions: persons at work, by sex, age, race, Hispanic or Latino ethnicity, and hours of work, 2013 annual averages

(Numbers in thousands)

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 10. Census regions and divisions: persons at work 1 to 34 hours, by sex, race, Hispanic or Latino ethnicity, usual full- or part-time status, and reason for working less than 35 hours, 2013 annual averages

(In thousands)

Population group and area	Usually work full time						Usually work part time							
	Total	Slack work or business conditions	Vacation or personal day	Holiday, legal or religious	Weather-related curtailment	Other reasons ¹	Total	Slack work or business conditions	Could find only part-time work	Child-care problems	Other family or personal obligations	In school or training	Retired or Social Security limit on earnings	Other reasons ²

¹ Includes seasonal work, job started or ended, own illness, childcare problems, other family or personal obligations, labor dispute, in school or training, civic or military duty, and all other reasons.

² Includes seasonal work, health and medical limitations, full-time workweek less than 35 hours, and all other reasons.

³ Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

¹ Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 13. Census regions and divisions: unemployed persons, by sex, age, race, Hispanic or Latino ethnicity, and duration of unemployment, 2013 annual averages

¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number of sample cases is very small or the unemployment rate is too low.

³ Fewer than 500 persons or less than 0.05 percent.

NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

¹ Employed persons are classified as full- or part-time workers on the basis of their usual weekly hours at all jobs, regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

² Includes some persons at work 35 or more hours, classified by their reason for working part time.

³ Fewer than 500 persons.

⁴ Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 17. States: employment status of the experienced¹ civilian labor force, by occupation, 2013 annual averages

(Numbers in thousands)

Employment status and state	Total	Management, professional, and related		Service	Sales and office		Natural resources, construction, and maintenance			Production, transportation, and material moving

¹ Excludes persons with no previous work experience.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Fewer than 500 persons.

NOTE: Levels may not compute to displayed rates because of rounding.

Table 18. States: percent distribution of employed persons, by occupation, sex, race, and Hispanic or Latino ethnicity, 2013 annual averages

Population group and state	Number (thousands)	Management, professional, and related		Service	Sales and office		Natural resources, construction, and maintenance			Production, transportation, and material moving	
		Management, business, and financial operations	Professional and related		Sales and related	Office and administrative support	Farming, fishing, and forestry	Construction and extraction	Installation, maintenance, and repair	Production	Transportation and material moving

¹ Less than 0.05 percent.

NOTE: Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

NOTE: Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Includes unpaid family workers.

² Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 22. States: persons at work, by sex, age, race, Hispanic or Latino ethnicity, and hours of work, 2013 annual averages

(Numbers in thousands)

Population group and state	Total at work	Hours at work								Average hours	
		1 to 14 hours	15 to 29 hours	30 to 34 hours	35 or more hours					Total at work	Persons who usually work full time
					Total	35 to 39 hours	40 hours	41 to 48 hours	49 or more hours

¹ Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 23. States: persons at work 1 to 34 hours, by sex, race, Hispanic or Latino ethnicity, usual full- or part-time status, and reason for working less than 35 hours, 2013 annual averages

(In thousands)

Population group and State	Usually work full time						Usually work part time							
	Total	Slack work or business conditions	Vacation or personal day	Holiday, legal or religious	Weather-related curtailment	Other reasons ¹	Total	Slack work or business conditions	Could find only part-time work	Child-care problems	Other family or personal obligations	In school or training	Retired or Social Security limit on earnings	Other reasons ²

¹ Includes seasonal work, job started or ended, own illness, childcare problems, other family or personal obligations, labor dispute, in school or training, civic or military duty, and all other reasons.

² Includes seasonal work, health and medical limitations, full-time workweek less than 35 hours, and all other reasons.

³ Fewer than 500 persons.

NOTE: Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

¹ Fewer than 500 persons.

NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Table 26. States: unemployed persons, by sex, race, Hispanic or Latino ethnicity, and duration of unemployment, 2013 annual averages

Population group and state	Thousands of persons								Weeks	
	Total unemployed	Less than 5 weeks	5 to 14 weeks	15 weeks or more					Mean duration	Median duration
				Total	15 to 26 weeks	27 weeks or more				
						Total	27 to 51 weeks	52 weeks or more

¹ Fewer than 500 persons.

NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Detailed items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls.

Section III. Estimates for Metropolitan Areas, Metropolitan Divisions, and Cities

Labor force, employment, and unemployment levels for the selected metropolitan areas, metropolitan divisions, and cities are not provided in tables 27 through 32, because independent population controls are not available. Only rates, ratios, and percent distributions are published. Unemployment rates shown in table 27 differ from the estimates produced through the LAUS program.

Table 27. Selected metropolitan areas, metropolitan divisions, and cities: civilian labor force participation rates, employment–population ratios, and unemployment rates, by sex, age, race, Hispanic or Latino ethnicity, and marital status, 2013 annual averages

¹ Error ranges are calculated at the 90–percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number of sample cases is very small or the unemployment rate is too low.

³ Data do not match the official U.S. Office of Management and Budget definition. (See appendix C.)

⁴ Less than 0.05 percent.

NOTE: Data are not shown when the labor force base does not meet the BLS standard of reliability for the area in question, as determined by the sample size. (See appendix B.)

Table 28. Selected metropolitan areas, metropolitan divisions, and cities: civilian labor force participation rates, employment–population ratios, and unemployment rates for the noninstitutional population 25 years and older, by educational attainment, 2013 annual averages

Area type, title, and educational attainment	Civilian labor force participation rate	Employment–population ratio	Unemployment rate
Metropolitan areas:			
Atlanta–Sandy Springs–Marietta			
Less than a high school diploma	50.4	45.0	10.7
High school graduate, no college	60.7	54.9	9.5
Some college or associate's degree	74.3	68.8	7.4
Bachelor's degree and higher	77.3	74.6	3.5
Austin–Round Rock–San Marcos			
Less than a high school diploma	63.9	60.7	5.1
High school graduate, no college	68.9	63.4	8.0
Some college or associate's degree	71.6	68.9	3.8
Bachelor's degree and higher	75.8	73.3	3.3
Baltimore–Towson			
Less than a high school diploma	44.2	40.2	9.1
High school graduate, no college	62.3	57.9	7.1
Some college or associate's degree	70.3	66.5	5.5
Bachelor's degree and higher	79.0	75.6	4.3
Birmingham–Hoover			
High school graduate, no college	51.2	48.4	5.6
Some college or associate's degree	65.7	62.3	5.2
Bachelor's degree and higher	77.1	74.7	3.1
Boston–Cambridge–Quincy			
Less than a high school diploma	34.8	30.0	14.0
High school graduate, no college	58.7	55.3	5.8
Some college or associate's degree	69.7	65.2	6.5
Bachelor's degree and higher	79.6	77.0	3.3
Bridgeport–Stamford–Norwalk			
Less than a high school diploma	39.4	33.0	16.2
High school graduate, no college	56.7	51.4	9.4
Some college or associate's degree	62.5	55.6	11.0
Bachelor's degree and higher	75.5	71.7	5.0
Buffalo–Niagara Falls			
Less than a high school diploma	39.5	34.0	13.8
High school graduate, no college	55.3	51.9	6.2
Some college or associate's degree	72.3	67.8	6.2
Bachelor's degree and higher	79.0	74.9	5.1
Charlotte–Gastonia–Rock Hill			
Less than a high school diploma	57.5	51.1	11.1
High school graduate, no college	61.1	55.2	9.6
Some college or associate's degree	65.8	62.5	5.0
Bachelor's degree and higher	75.7	72.0	4.8
Chicago–Joliet–Naperville			
Less than a high school diploma	52.1	45.3	13.0
High school graduate, no college	58.1	52.1	10.4
Some college or associate's degree	70.4	65.4	7.2
Bachelor's degree and higher	78.4	74.7	4.6

See footnotes at end of table.

Table 28. Selected metropolitan areas, metropolitan divisions, and cities: civilian labor force participation rates, employment–population ratios, and unemployment rates for the noninstitutional population 25 years and older, by educational attainment, 2013 annual averages—Continued

Area type, title, and educational attainment	Civilian labor force participation rate	Employment–population ratio	Unemployment rate
Metropolitan areas:			
Cincinnati–Middletown			
Less than a high school diploma	41.8	36.8	12.1
High school graduate, no college	58.9	55.4	6.1
Some college or associate's degree	71.1	67.1	5.5
Bachelor's degree and higher	78.5	76.5	2.6
Cleveland–Elyria–Mentor			
Less than a high school diploma	30.6	26.0	15.1
High school graduate, no college	56.4	52.1	7.6
Some college or associate's degree	66.5	62.3	6.3
Bachelor's degree and higher	75.6	73.0	3.4
Columbus			
Less than a high school diploma	32.4	26.1	19.2
High school graduate, no college	61.0	56.5	7.3
Some college or associate's degree	70.6	66.0	6.5
Bachelor's degree and higher	78.3	75.6	3.4
Dallas–Fort Worth–Arlington			
Less than a high school diploma	66.6	61.5	7.7
High school graduate, no college	66.5	62.4	6.2
Some college or associate's degree	71.8	67.9	5.4
Bachelor's degree and higher	78.7	76.2	3.2
Dayton			
High school graduate, no college	53.4	47.4	11.4
Some college or associate's degree	70.7	64.2	9.1
Bachelor's degree and higher	71.9	70.1	2.6
Denver–Aurora–Broomfield			
Less than a high school diploma	62.6	55.8	10.9
High school graduate, no college	63.2	59.8	5.4
Some college or associate's degree	72.6	67.7	6.7

¹ Excludes persons with no previous work experience. Includes farming, fishing, and forestry occupations, which are not shown separately.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

⁴ Less than 0.05 percent.

¹ Includes farming, forestry, and fishing occupations, which are not shown separately.

² Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

³ Less than 0.05 percent.

NOTE: Data for demographic groups are not shown when they do not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.)

¹ Excludes persons with no previous work experience. Includes self-employed and unpaid family workers, and mining, which are not shown separately.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

⁴ Less than 0.05 percent.

¹ Includes mining and agriculture, which are not shown separately.

² Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

³ Less than 0.05 percent.

NOTE: Data for demographic groups are not shown when they do not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.)

Appendix A.

Concepts and Definitions for Data Derived from the Current Population Survey

Tables showing the labor force status include estimates of the civilian noninstitutional population 16 years and older, as well as data on the civilian labor force, labor force participation rates, employment, and unemployment rates. Population estimates are revised by the U.S. Census Bureau each year, and these revised estimates are incorporated into the Current Population Survey (CPS) labor force levels. This adjustment affects the estimates of labor force, employment, and unemployment levels, but it generally does not affect percentage measures, such as unemployment rates, labor force participation rates, or employment–population ratios. Thus, levels contained in this publication may not be comparable with levels published prior to or after 2013 in *Geographic Profile of Employment and Unemployment*.

The concepts and definitions underlying the labor force data in this bulletin are as follows:

Civilian noninstitutional population. This category comprises all people 16 years of age and older residing in the 50 states and the District of Columbia who are not inmates of institutions (for example, penal and mental facilities and homes for the aged) and who are not on active duty in the Armed Forces.

Employed. These are all people who, during the reference week, (a) worked for least 1 hour as paid employees in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family, or (b) were not working but had jobs or businesses from which they were temporarily absent because of a labor–management dispute, job training, vacation, illness, bad weather, childcare problems, maternity or paternity leave, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

Unemployed. Those in this category are all people who had no employment during the reference week, were available for work—except for temporary illness—and made specific efforts to find employment sometime during the 4-week period ending with the reference week. People who were waiting to be recalled to a job from which they

had been laid off need not have been looking for work to be classified as unemployed.

Duration of unemployment. This categorization represents the length of time (through the current reference week) that people classified as unemployed had been looking for work. For people who were laid off, the duration of unemployment represents the number of full weeks they had been on layoff.

Reason for unemployment. Unemployment is categorized according to the status of individuals at the time they began to look for work. People are divided into five major groups on the basis of their reason for unemployment: (1) *job losers*, comprising (a) people *on temporary layoff*, who have been given a date to return to work or who expect to return within 6 months (people on layoff need not be looking for work to qualify as unemployed), and (b) *permanent job losers*, whose employment ended involuntarily and who began looking for work; (2) *job leavers*, who quit or otherwise terminated their employment voluntarily and immediately began looking for work; (3) *people who completed temporary jobs* (included along with job losers in this publication), who began looking for work after their temporary jobs ended; (4) *reentrants*, who previously worked but were out of the labor force prior to beginning their job search; and (5) *new entrants*, who have never worked.

Labor force. This group comprises all people classified as employed or unemployed in accordance with the criteria described in the previous paragraph.

Unemployment rate. The unemployment rate represents the number of unemployed people as a percentage of the labor force.

Participation rate. This measure represents the proportion of the civilian noninstitutional population that is in the labor force.

Employment–population ratio. This measure represents the proportion of the civilian noninstitutional population that is employed.

Married, spouse present; and family. “Married, spouse present,” applies to husband and wife if both were living in the same household, even if one is temporarily absent on business, on vacation, on a visit, in a hospital, etc. A family is defined as a group of two or more people residing together who are related by birth, marriage, or adoption; all such people are considered as members of one family. Families are classified either as married-couple families or as families maintained by women or men without spouses. A family maintained by a woman or a man is defined as a family in which the householder is either single, widowed, divorced, or married with the spouse absent.

Occupation and industry. This information regarding the employed applies to the job held in the reference week. People with two or more jobs are classified as being in the job at which they worked the greatest number of hours. The unemployed are classified according to their last job. The occupation and industry classification of CPS data is based on the coding systems used in census 2000.

Class of worker. The class-of-worker breakdown assigns workers to the following categories: private and government wage and salary workers, self-employed workers, and unpaid family workers. Wage and salary workers receive wages, salary, commissions, tips, or pay in kind from a private employer or from a government unit. Self-employed people are those who work for profit or fees in their own business, profession, trade, or farm. Only the unincorporated self-employed are included in the self-employed category in the class-of-worker typology. Self-employed people who respond that their businesses are incorporated are included among wage and salary workers because, technically, they are paid employees of a corporation. Unpaid family workers are people working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

Hours of work. These statistics relate to the actual number of hours worked during the reference week. For example, people who normally work 40 hours a week but were off on the Columbus Day holiday would be reported as working 32 hours, even though they were paid for the holiday. For people working in more than one job, the figures relate to the number of hours worked in all jobs during the week, with all of the hours credited to the major job.

At work part time for economic reasons. Sometimes called “involuntary part time,” this category refers to individuals who give an economic reason for working 1 to 34 hours during the reference week. Economic reasons include unfavorable business conditions, inability to find full-time work, and seasonal declines in demand. Those who usually work part time must indicate that they want and are

available to work full time in order to be classified as at work part time for economic reasons.

At work part time for noneconomic reasons. This group includes those people who usually work part time and were at work 1 to 34 hours during the reference week for a noneconomic reason. Some examples of noneconomic reasons are illness or other medical limitations, childcare problems or other family or personal obligations, school or training, retirement or Social Security limits on earnings, and being in a job in which full-time work is less than 35 hours. The group also includes those who give an economic reason for usually working 1 to 34 hours but say they do not want to work full time or are unavailable for such work.

Usual full- or part-time status. Data on people “at work” exclude people who were temporarily absent from a job and are therefore classified into the zero-hours-worked category, “with a job but not at work.” These are people who were absent from their jobs for the entire reference week for such reasons as bad weather, childcare problems, maternity or paternity leave, vacation, illness, or involvement in a labor dispute. In order to differentiate a person's normal schedule from his or her activity during the reference week, people also are classified according to their usual full- or part-time status. In this context, *full-time workers* are those who usually work 35 or more hours (at all jobs combined). This group will include some individuals who worked less than 35 hours in the reference week for either economic or noneconomic reasons and those who are temporarily absent from work. Similarly, *part-time workers* are those who usually work less than 35 hours per week (at all jobs), regardless of the number of hours worked in the reference week. This group may include some individuals who actually worked at least 35 hours in the reference week, as well as those who were temporarily absent from work.

White, Black or African American, Asian, and “other.” These terms describe the race of people. Included in the “other” group are people classified as American Indian and Alaska Native (AIAN), as Native Hawaiian and other Pacific Islander (NHPI), as some other race (SOR), and within two or more race categories. Because of the relatively small sample size in most areas, data for “other” races are not published at this time. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. This category refers to people who identified themselves in the survey as Mexican, Puerto Rican, Cuban, Central or South American, or of other Hispanic or Latino ethnicity or descent. People of Hispanic or Latino ethnicity may be of any race; thus, they are included in the White, Black or African American, and Asian population groups.

Appendix B. Sampling and Estimation Procedures and Sampling Error Tables

The estimates presented in this bulletin are based on annual averages of monthly data obtained from the Current Population Survey (CPS), a sample survey of the civilian noninstitutional population. The survey, conducted each month by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics, provides comprehensive data on the labor force, including such characteristics as age, sex, race, Hispanic or Latino ethnicity, marital status, occupation, and industry. The survey also provides data on the characteristics of those not in the labor force.

Each month, trained interviewers collect information from a scientifically selected sample of about 60,000 eligible households. This sample, designed to represent the civilian noninstitutional population, also includes about 10,000 households in order to meet the requirements of the State Children's Health Insurance Program (SCHIP) legislation. The SCHIP legislation required the Census Bureau to improve state estimates of the number of children who live in low-income families and lack health insurance. These estimates are obtained from the Annual Demographic Supplement to the CPS. In September 2000, the Census Bureau began expanding the monthly CPS sample in 31 states and the District of Columbia because of the SCHIP legislation.

Selected respondents in the eligible households are interviewed to obtain information about the employment status of each household member 16 years of age and older. The information that is collected pertains to a "reference week," usually the calendar week (Sunday to Saturday) that includes the 12th of the month, with actual interviewing occurring during the week following the reference week—known as the "survey week."

Sampling procedures

The 2013 sample encompasses 824 sample areas, with coverage of every state and the District of Columbia. It is based, to a large extent, on information about the distribution of the population as reported in the census 2000 enumeration. (A redesigned census 2000-based sample was phased in from April 2004 through July 2005.) The 824 areas were selected by dividing the entire area of the United States into 2,025 primary sampling units (PSUs). With some minor exceptions, a PSU consists of a county or a number of contiguous counties. Most metropolitan areas constitute separate PSUs.

To improve the efficiency of the sample, the 2,025 PSUs are grouped into strata within each state. Those PSUs which are in a stratum by themselves are called "self-representing" and are generally the most populous in each state. Other strata are formed by combining PSUs that are similar in such characteristics as population growth, proportion of Blacks and Hispanics, and distributions by occupation and industry and by age and sex. PSUs selected from these strata are "non-self-representing," because each one chosen represents the entire stratum. One PSU is selected from each stratum, with the probability of selection proportional to the relative population size of the PSU.

In states with a SCHIP sample, the self-representing PSUs are the same for both the regular CPS and SCHIP. In most states, the same non-self-representing sample PSUs are in the sample for both the regular CPS and SCHIP; however, to improve the reliability of the SCHIP estimates in Maine, Maryland, and Nevada, the SCHIP non-self-representing PSUs are selected independently of the regular CPS sample PSUs, with replacement. The method for stratification of PSUs for SCHIP in these states is similar to that of the other stratifications, except that the stratification variable used is the number of people under age 18 with household income below twice the poverty level.

Within each of the selected PSUs, the number of households to be enumerated each month is determined in two steps. First, a sample of the unit's census enumeration districts (EDs) is selected through the use of the population size probability selection procedure. EDs are administrative units and contain, on average, about 300 households. Second, clusters of approximately four addresses (contiguous wherever possible) are selected to be enumerated within each designated ED.

Part of the sample is changed, or rotated, each month. A given rotation group is in the sample for 4 consecutive months, leaves the sample for the next 8 months, and then returns for another 4 consecutive months. A primary reason for rotating the sample is to minimize the lack of cooperation that may result from interviewing a constant panel indefinitely. The rotation plan provides for three-fourths of the sample to be identical from one month to the next and one-half to be identical with that from the same month a year earlier.

Methods of estimation

Under the methods of estimation used in the CPS, all of the results for a given month become available simultaneously and are based on returns from the entire sample of respondents. The estimation procedure involves weighting the data from each respondent by the inverse of the probability of the person being in the sample. The result gives a rough measure of the number of actual people that each sample case represents. Through a series of estimation steps (outlined next), the selection probabilities are adjusted for noninterviews and survey undercoverage; data from previous months are incorporated into the estimates through the composite estimation procedure.

1. *Noninterview adjustment.* The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondents for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a state. Similarity of sample areas is based on metropolitan area status and size. Within each cluster, there is a further breakdown by residence. The proportion of sample households not interviewed averages about 7 percent to 8 percent, depending upon a number of factors, including weather and vacations.

2. *Ratio estimates.* The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and state of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of the population characteristics. This task is accomplished through four stages of adjustment, as follows:

a. *First-stage ratio adjustment.* The purpose of the first-stage ratio adjustment is to reduce the contribution to the variance of the sample state-level estimates arising from the sampling of PSUs. (There would still be variance associated with the state-level estimates even if the survey included all households in every sample PSU.) This kind of variance is called between-PSU variance. For some states, the between-PSU variance makes up a relatively large proportion of the total variance, whereas the relative contribution of the between-PSU variance at the national level is generally quite small. There are several factors to consider in determining what information to use in applying the first-stage adjustment: the information must be available for each PSU, be correlated with as many of the relevant statistics from the CPS as possible, and be reasonably stable over time so that the gain achieved from

the ratio adjustment procedure does not deteriorate. The basic labor force categories (unemployed, nonagricultural employed, etc.) could be used; however, this information probably would fail the stability criterion. The distribution of the population by race (Black alone and non-Black alone) by age groups 0–15 years old and 16 years and older satisfies all three criteria, including stability.

Use of the categories of Black alone and non-Black alone compensates for the fact that the racial composition of a non-self-representing (NSR) sample PSU could differ substantially from the racial composition of the stratum it is representing. This adjustment is not necessary for self-representing (SR) PSUs, because they represent only themselves. Adjustment factors are computed for the two race categories for each state containing NSR PSUs. The Black-alone and non-Black-alone cells are collapsed within a state when a cell meets any one of four sampling criteria.¹ As a result of these criteria, the first-stage ratio adjustment actually is used (i.e., does not collapse to 1.0) in less than half of the states.

b. *National coverage adjustment.* A national coverage adjustment was added to the CPS weighting process beginning in 2003. The purpose of the national coverage adjustment is to correct for interactions between race and ethnicity that are not addressed in the second-stage weighting. (See item “d” following.) Research has shown that the undercoverage of certain race–ethnicity combinations (e.g., non-Black Hispanic) cannot be corrected with second-stage adjustment alone. The national coverage adjustment also helps to speed the convergence of the second-stage adjustment, resulting in fewer iterations required to reach the final national controls. The national coverage adjustment factors are based on independently derived estimates of the population. Person records are grouped into four pairs on the basis of their month-in-sample (MIS). MISs 1 and 5, 2 and 6, 3 and 7, and 4 and 8 form the four pairs. Each MIS pair is then adjusted to age–sex–race–ethnicity population controls. Between 2 and 28 age cells are used, depending on which of the six major coverage groups (Black alone non-Hispanic, White alone non-Hispanic, White alone Hispanic, non-White alone Hispanic, Asian alone non-Hispanic, or residual race non-Hispanic) is being adjusted.

c. *State coverage adjustment.* Besides a national coverage adjustment, a state coverage adjustment was added to the CPS weighting process beginning in 2003. The purpose of the state coverage adjustment is to adjust for state differences in age–sex–race coverage. Research

¹ The four sampling criteria are (1) that the adjustment factor be greater than 1.3; (2) that the adjustment factor be less than 1/1.3 (or 0.769230 in decimal form); (3) that there be fewer than four NSR sample PSUs in the state; and (4) that there be fewer than 10 expected interviews in an age–race cell in the state.

has shown that estimates of characteristics of certain race groups (e.g., Blacks) can differ greatly from the controls if a state coverage adjustment is not used. However, unlike the national coverage adjustment, the state coverage adjustment slows the convergence of the second-stage ratio adjustment process. The state coverage adjustment is based on independently derived estimates of the population. Except for the District of Columbia, person records for non-Black alone are grouped into four pairs based on (MIS)—with the same MIS pairings (1 and 5, 2 and 6, 3 and 7, and 4 and 8) used as in the national coverage adjustment. Person records for Black alone for all states and non-Black alone for the District of Columbia are formed at the state level, with all months in the sample combined. For the Black-alone component of the adjustment, states are adjusted with the use of a varying number of age–sex–race cells based on the expected number of sample records in each age–sex cell. For example, for non-Black alone, all states but not the District of Columbia are adjusted for three age groupings (0–15, 16–44, and 45 and older) by sex. Each cell is adjusted to independent age–sex–race population controls in each state.

d. *Second-stage ratio adjustment.* The second-stage ratio adjustment is performed to decrease the variance of the vast majority of the CPS sample estimates. Because the labor force status of individuals in the general population is correlated with their specific geographic and demographic identification (e.g., teenagers and unemployment, or rural married women and labor force participation), the variance of the labor force estimates can be reduced by controlling the CPS sample estimates to independent estimates of selected geographic and demographic population categories. The procedure also is believed to reduce bias due to coverage errors. The procedure adjusts the weights for the sample to estimates within each MIS pair to control the sample estimates for a number of geographic and demographic subgroups of the population in order to ensure that these sample-based estimates of the population match independent population controls for each of the categories. These independent population controls are updated each month. Three sets of controls are used: (1) the civilian noninstitutional population for the 50 states and the District of Columbia by sex and age (0–15, 16–44, and 45 and older); (2) the national civilian noninstitutional population for 36 Hispanic and 36 non-Hispanic age–sex categories; and (3) the total national civilian noninstitutional population for 56 White, 36 Black, and 26 residual age–sex–race categories.

The adjustment is done separately for each MIS pair (1 and 5, 2 and 6, 3 and 7, and 4 and 8). Because adjusting the weights to match one set of controls can cause differences in other controls, an iterative process is used to simultaneously control all variables. Successive iterations begin with the weights as adjusted by all previous iterations. Ten iterations are performed, resulting in (virtual)

consistency between the sample estimates and the population controls.

The independent population controls used for the CPS are produced by the Census Bureau’s Population Division. The CPS population controls are based on a demographic framework of population accounting. Under this framework, time series of population estimates and projections are anchored by the latest decennial census enumerations, with populations for dates since the latest decennial census derived from the estimation, or projection, of population change. In the simplest terms, information from a variety of data sources is used to derive estimates of population change by adjusting the resident population as enumerated in the latest decennial census for births, deaths, and net migration. Estimates of the resident population are adjusted to represent the civilian noninstitutional population 16 years of age and older (the eligible CPS population) by subtracting estimates of the number of residents under 16 years of age, the number of residents on active duty with the Armed Forces, and the number of residents who are institutionalized.

3. *Composite estimation procedure.* The last step in the preparation of most CPS estimates makes use of a composite estimation procedure. The composite estimate consists of a weighted average of two factors: (1) the second-stage ratio estimate based on the entire sample from the current month and (2) the composite estimate for the previous month, plus an estimate of the month-to-month change based on the six rotation groups common to both months. In addition, a bias adjustment term is added to the weighted average to account for relative bias associated with MIS estimates. The compositing procedure results in a further reduction in sampling error—that is, a reduction beyond that which is achieved after the two stages of ratio adjustment.

Effective with the release of January 1998 data, a new composite estimation method was implemented for the CPS. The new technique provides increased operational simplicity for microdata users and allows optimization of compositing coefficients for different labor force categories. Under the new procedure, weights are derived for each record. These weights, when aggregated, produce estimates consistent with those produced by the composite estimator. Under the previous procedure, composite estimation was performed at the macrolevel. The composite estimator for each tabulated cell was a function of the aggregated weights for respondents contributing to the cell in question in current and previous months. The different months of data were combined by the use of compositing coefficients. Thus, microdata users needed several months of data to compute composite estimates. To ensure consistency, the same coefficients had to be used for all estimates. The values of the coefficients selected were much closer to optimal for

unemployment values than for employment or labor force values.

The new composite weighting method involves two steps: (1) the computation of composite estimates for the main labor force categories, classified by important demographic characteristics, and (2) the adjustment of the microdata weights, through a series of ratio adjustments, to agree with these composite estimates, thus incorporating the effect of composite estimation into the microdata weights. Under this procedure, the sum of the composite weights of all sample cases in a particular labor force category equals the composite estimate of the level for that category. Thus, to produce a composite estimate for a particular month, a data user needs simply to access the microdata file for that (single) month and compute a weighted sum. The new composite weighting approach also improves the accuracy of labor force estimates by using different compositing coefficients for different labor force categories. The weighting adjustment method ensures additivity while allowing variation in the compositing coefficients.

Reliability of the estimates

The estimates in this bulletin are based upon a sample of the population rather than a complete count. Therefore, they may differ from the figures that would have been obtained if it had been possible to take a complete census using the same questionnaire and procedures that are used in the CPS. There are two types of errors in an estimate based on a sample survey: sampling error and nonsampling error. Appendix tables B-2 through B-5 indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration but do not measure any systematic biases in the data.

Sampling variability. The standard error is primarily a measure of sampling variability—that is, the variation that occurs by chance because a sample rather than the entire population is surveyed. The sample estimate and its standard error enable one to construct confidence intervals: ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these samples were surveyed under essentially the same conditions by use of the same sample design, and an estimate and its estimated standard error were calculated from each sample, then the following would occur:

1. Approximately 68 percent of the intervals from 1 standard error below the estimate to 1 standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate

would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from 2 standard errors below the estimate to 2 standard errors above the estimate would include the average result of all possible samples.

The error of a sample estimate varies inversely with the size of the sample and directly with the size of the estimate. Hence, an estimate for a subgroup constituting a small proportion of a population will tend to have a larger error relative to its size than will an estimate for a larger subgroup.

Reliability standards

The CPS sample design takes into consideration both national and state reliability. For the state data, a minimum reliability standard is set: an expected maximum coefficient of variation (CV) on the level of total unemployment of 8.0 percent annually. This CV is calculated with the assumption of a 6.0-percent unemployment rate. Because each state's sample design must meet the reliability standard, the CPS sampling rate differs by state. (The sampling rate is the proportion of all households that are selected for the sample.) Generally, the smaller the state population, the higher is the sampling rate. Sampling rates range roughly from 1 in every 200 households to 1 in every 2,500 households in each stratum within the state.

Publication standards for state and area CPS data

To achieve comparability of the data for regions, divisions, states, metropolitan areas, metropolitan divisions, and cities for publication purposes, a unique requirement for minimum levels for the labor force and for employment and unemployment was developed for each area. This requirement is based on the known differences in sampling rates among these areas. Before estimates are published for a specific category (such as Hispanic unemployment in a particular state), a predetermined "critical cell" must meet a 50-percent CV requirement. As a result of this requirement, minimum bases for publication have been developed for each area. Table B-1 lists the minimum necessary base for publication of data in each of the census regions and divisions; in the states and the District of Columbia; and in the metropolitan areas, metropolitan divisions, and cities appearing in this bulletin.

Estimates are not shown when they do not meet the minimum base for the state or area listed in table B-1. In tables showing the labor force status of the population—that is, the number of employed and unemployed—publishability is determined by whether the labor force level exceeds the minimum base for unemployment in table B-1. If the labor force level is less than the unemployment minimum base, all data—labor force,

employment, unemployment, and unemployment rate—are suppressed. In all other tables, the determining factor is whether the size of the base of the distribution exceeds the minimum base for employment or unemployment separately, depending on whether the table presents a distribution of employment or unemployment for the area or population subgroup. For example, in the table showing unemployed people by reason for unemployment, the entire line of data will be suppressed if the total unemployment is less than the minimum base for unemployment. If a subgroup appears in the table (such as a given gender or race), data for the subgroup also will be suppressed if the total for the reason in question does not meet the minimum base. Data are not published for any cell with a level of less than 500 people or less than 0.05 percent of the total for a given characteristic.

Using the sampling error tables

Appendix tables B-2 through B-5 provide sampling errors for use in constructing 90-percent confidence intervals (approximately 1.645 standard errors) for the major employment status characteristics. The sampling errors provided are approximations and thus indicate the order of magnitude of the sampling error rather than the precise amount of the possible error in an estimate. Illustrations on the use of these tables are provided next. In all cases, the computations present the estimated levels in thousands of people.

Sampling error of an estimated number. Table B-5 shows that an estimate of 50,000 unemployed persons in Michigan will have an absolute sampling error of 10,000, for a relative sampling error of 20 percent (10,000/50,000). In comparison, an estimate of 100,000 unemployed people in Michigan has an absolute sampling error of 14,000, yielding a relative sampling error of 14 percent (14,000/100,000). A statement that unemployment for a particular group is between 40,000 and 60,000 in the first instance, and between 86,000 and 114,000 in the second, can be made with approximately 90-percent confidence.

The latter statement can be interpreted as follows: if one were to draw all possible samples, make an estimate from each sample (using the same methods and techniques), and construct an interval around each estimate (with the sampling errors shown in the tables), then 90 percent of the intervals would contain the average value of all possible samples.

In order to convert a sampling error from 90-percent confidence, as displayed in the tables, to 68-percent confidence (1 standard error), multiply the sampling error shown in the tables by 0.63. To convert the sampling error from 90-percent to 95-percent confidence (approximately 2 standard errors), multiply the sampling error by 1.23. For the example given, the sampling error at 90-percent confidence is 10,000. At 68-percent confidence, the error would be about 6,300 (10,000 × 0.63). At 95-percent

confidence, the error would be about 12,300 (10,000 × 1.23).

Sampling error of a difference. To compute the error of a difference from the tables, an additional step is required. If, for instance, one wishes to know whether a change in the unemployment rate from one year to the next in a particular area for a particular population group is statistically significant or whether the difference in the unemployment rate between two areas or population groups is statistically meaningful, the significance of the difference needs to be computed. (Differences between estimates for 2 consecutive years may be influenced to some extent by a redesign of the CPS concepts, questionnaire, and collection procedures, such as the one that occurred in 1994.)

As noted before, differences can take two general forms: (1) differences between population groups and/or geographic areas, and (2) differences for the same population group and geographic area over time. Either type of difference can be calculated with the following formula, noting the limiting covariance assumption discussed later:

$$SE_d = [(SE_1^2 + SE_2^2) - 2C(SE_1 \times SE_2)]^{1/2}.$$

In this equation,

SE_d = the sampling error of the difference,

SE_1 = the sampling error of one group or year,

SE_2 = the sampling error of another group or year,

and

C = the covariance (or relationship) term.

The values of SE_1 and SE_2 can be found in the appropriate table of *Geographic Profile* for each year if the comparison is between different years, because the size of the samples and, consequently, sampling errors may differ from year to year. Values for the covariance, or C term, for employment and unemployment for differences between *consecutive* years are as follows: for labor force or employment levels, $C = 0.58$; for unemployment levels or rates, $C = 0.37$. It is important to note that these C terms are usable only for calculating the sampling error of a difference for over-the-year change for the *same geographic area and population group*.

Covariance terms for the relationship between different population groups or geographic areas in this bulletin are not available. In calculating sampling errors for differences between two *different* population groups or geographic areas, a C term of zero must be assumed. The effect of this assumption is that (1) if the relationship between two groups, areas, or years (differences for nonconsecutive years) is small, then the C term can legitimately be ignored and the sampling errors will not be adversely affected, and (2) if there is a strong positive relationship between the two groups, areas, or years (differences for consecutive years), then the error

computed without a C term will be overstated. An overstatement could lead one to state that a difference or change was *not* statistically significant when, in fact, it was. When there is a strong relationship over time for a characteristic such as employment (people tend to remain employed from one year to the next), the importance of using a C term to calculate the sampling error of a difference over time increases greatly.

The next example illustrates how to calculate the sampling error of a difference. Suppose one wished to know whether a *hypothetical* difference between an unemployment level of 250,000 for a particular population group in California and an unemployment level of 200,000 for the same group in New York was statistically significant at 90-percent confidence. Table B-5 gives the error for an unemployment level of 250,000 in California as approximately 22,000 and the error for an unemployment level of 200,000 in New York as 19,000. Using the formula described previously without the C term produces the following results (levels in thousands):

$$\begin{aligned} SE_1 &= 22; SE_2 = 19 \\ SE_1^2 + SE_2^2 &= 845 \\ SE_d &= (SE_1^2 + SE_2^2)^{1/2} = 29 \end{aligned}$$

Because each states' sample is independent, there is no measurable correlation between the unemployment estimates for California and New York, and a C term of zero can be assumed. Thus, the error of the difference is approximately 29,000. Because the actual difference (50,000) is greater than the error of the difference, it can be stated with 90-percent confidence that the difference in the unemployment level is attributable to factors other than sampling variability alone.

Sampling errors for unemployment rates. Unemployment rates and error ranges for these rates are provided in tables 1, 14, and 27. This information can be used to derive a sampling error for an unemployment rate if one is needed. The error range is a 90-percent confidence interval around the unemployment rate. By subtracting the estimated unemployment rate from the upper bound of the range (or subtracting the lower bound of the range from the estimated unemployment rate), the sampling error for the rate can be obtained. This sampling error can then be used in the formula given previously for computing the sampling error of a difference, or for any other purpose the user chooses.

Interpolation and extrapolation. Although sampling errors are listed for selected levels of employment and unemployment in tables B-2 through B-5, users may wish to know the sampling error for an estimate whose value is not listed. To derive such a sampling error, it is necessary to use interpolation or extrapolation.

For example, in order to derive the sampling error for the 2013 total unemployment level for men in Indiana, it is necessary to use interpolation because table B-5 contains no sampling error for an unemployment-level estimate of 126,000. The following formula and accompanying example show how to interpolate for this estimate:

$$SE = \{[(A - G) / (F - G)] \times (X - Y)\} + Y.$$

In this equation,

SE = the sampling error for the estimated value, A

A = the estimated value (126,000),

F = the table value (200,000) immediately above the estimated value,

G = the table value (100,000) immediately below the estimated value,

X = the sampling error of F (19,000), and

Y = the sampling error of G (14,000).

Thus (levels in thousands),

$$\begin{aligned} SE &= \{[(126 - 100) / (200 - 100)] \times (19 - 14)\} + 14 \\ &= (0.26 \times 5) + 14 \\ &= 1.3 + 14 \\ &\approx 15 \end{aligned}$$

If the sample-based estimate lies outside the boundaries of the error tables, extrapolation can be used to approximate the sampling error. The formula for extrapolation is the same as that for interpolation; however, the F term becomes the highest value in the table and the G term becomes the next-highest value.

Derivation of sampling errors

The state and area sampling errors are developed with a generalized regression procedure and are *not* based on sample data for each individual area, population group, or labor force characteristic. As with all sampling error tables produced for CPS state and area data, a number of approximations are required in order to derive sampling errors that apply to a wide variety of items. As a result, these sampling errors indicate the order of magnitude of the error rather than a precise error for any specific item. The sampling error tables are derived from standard error equations and special parameters developed by the Bureau of Labor Statistics. These parameters are available upon request from the Division of Local Area Unemployment Statistics, Bureau of Labor Statistics, Room 4675, 2 Massachusetts Avenue NE, Washington, DC 20212-0001. Telephone: (202) 691-6392.

Tables B-2 through B-5 can be used for estimates pertaining to any race or ethnic group whose data are published. As noted, the sampling errors are based on a generalized regression procedure and are approximate. Generally, the degree of precision in these tables is slightly greater for Whites (and the total of all race and ethnic groups) than it is for Blacks or Hispanics.

Appendix C. Geographic Boundary Definitions

Table C-1 of this appendix lists the states composing the census regions and divisions for which data are published in section I. Tables C-2 and C-3 provide the geographic boundary definitions of the metropolitan areas and metropolitan divisions, respectively, for which data are published in section III. The information for metropolitan areas and metropolitan divisions reflects the standards and definitions established by the U.S. Office of Management and Budget (OMB) on June 6, 2003.¹

Effective December 22, 1987, the boundary of the St. Louis metropolitan area was redefined to include the part of Sullivan city in Crawford County, Missouri. That change is not reflected in the data for St. Louis shown in this bulletin, although the addition of entire counties in 2003 is reflected.

Metropolitan areas and metropolitan divisions

The general concept of a metropolitan area is that of a core area containing a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that core.

¹ The standards were published in the *Federal Register* on December 27, 2000. The definitions and a complete listing of the areas were first published on June 6, 2003, in OMB Bulletin No. 03-04. Area titles appearing in this publication reflect updates per OMB Bulletin No. 10-02, *Update of Statistical Area Definitions and Guidance on Their Uses*, dated December 1, 2009.

A *Metropolitan Statistical Area* consists of at least one urbanized area that has a population of at least 50,000. The Metropolitan Statistical Area comprises the central county or counties containing the urbanized core area, plus adjacent outlying counties having a high degree of social and economic integration with the central county or counties, as measured through commuting ties.

A *Metropolitan Division* is essentially a separately identifiable employment center within a very large Metropolitan Statistical Area (one with a core population of 2.5 million or more). The Metropolitan Division consists of one or more main or secondary counties that represent an employment center, plus adjacent counties associated with the main or secondary county or counties through the strongest commuting ties.

The data published in section III reflect New England City and Town Area definitions, rather than the county-based Metropolitan Statistical Area and Metropolitan Division definitions, in the six New England states. In previous decades, the statistical areas that OMB had defined for the New England states were city and town based, with county-based areas specified as an alternative for users seeking a comparable geographic basis. For the current definitions, all Metropolitan Statistical Areas and Metropolitan Divisions are county based, with New England City and Town Areas serving as an equivalent alternative for the New England states.

Table C-1. State composition of the census regions and divisions

Region and division	State
Northeast:	
New England	Connecticut Maine Massachusetts New Hampshire Rhode Island Vermont
Middle Atlantic	New Jersey New York Pennsylvania
Midwest:	
East North Central	Illinois Indiana Michigan Ohio Wisconsin
West North Central	Iowa Kansas Minnesota Missouri Nebraska North Dakota South Dakota
South:	
South Atlantic	Delaware District of Columbia Florida Georgia Maryland North Carolina South Carolina Virginia West Virginia
East South Central	Alabama Kentucky Mississippi Tennessee
West South Central ...	Arkansas Louisiana Oklahoma Texas
West:	
Mountain	Arizona Colorado Idaho Montana Nevada New Mexico Utah Wyoming
Pacific	Alaska California Hawaii Oregon Washington

Table C-2. Geographic boundaries of selected metropolitan areas

State and area	Definition
Alabama Birmingham–Hoover	Bibb, Blount, Chilton, Jefferson, St. Clair, Shelby, and Walker Counties
Arizona Phoenix–Mesa–Glendale	Maricopa and Pinal Counties
California Los Angeles–Long Beach–Santa Ana Riverside–San Bernardino–Ontario Sacramento–Arden–Arcade–Roseville San Diego–Carlsbad–San Marcos San Francisco–Oakland–Fremont San Jose–Sunnyvale–Santa Clara	Los Angeles and Orange Counties Riverside and San Bernardino Counties El Dorado, Placer, Sacramento, and Yolo Counties San Diego County Alameda, Contra Costa, Marin, San Francisco, and San Mateo Counties San Benito and Santa Clara Counties
Colorado Denver–Aurora–Broomfield	Adams, Arapahoe, Broomfield, Clear Creek, Denver, Douglas, Elbert, Gilpin, Jefferson, and Park Counties
Connecticut Bridgeport–Stamford–Norwalk Hartford–West Hartford–East Hartford	Bridgeport, Norwalk, Shelton, and Stamford cities, and Darien, Easton, Fairfield, Greenwich, Monroe, New Canaan, Newtown, Redding, Ridgefield, Stratford, Trumbull, Weston, Westport, and Wilton towns in Fairfield County; Ansonia, Derby, and Milford cities, and Oxford, Seymour, Southbury, and Woodbridge towns in New Haven County Bristol, Hartford, and New Britain cities, and Avon, Berlin, Bloomfield, Burlington, Canton, East Granby, East Hartford, Farmington, Glastonbury, Granby, Hartland, Manchester, Marlborough, Newington, Plainville, Rocky Hill, Simsbury, Southington, South Windsor, West Hartford, Wethersfield, and Windsor towns in Hartford County; Barkhamsted, Harwinton, New Hartford, Plymouth, and Thomaston towns in Litchfield County; Middletown city, and Cromwell, East Haddam, East Hampton, Haddam, Middlefield, and Portland towns in Middlesex County; Colchester and Lebanon towns in New London County; Andover, Bolton, Columbia, Coventry, Ellington, Hebron, Mansfield, Stafford, Tolland, Union, Vernon, and Willington towns in Tolland County; Ashford town in Windham County
District of Columbia Washington–Arlington–Alexandria	District of Columbia; Alexandria, Fairfax, Falls Church, Fredericksburg, Manassas, and Manassas Park cities, and Arlington, Clarke, Fairfax, Fauquier, Loudoun, Prince William, Spotsylvania, Stafford, and Warren Counties, VA; Calvert, Charles, Frederick, Montgomery, and Prince George's Counties, MD; Jefferson County, WV
Florida Jacksonville Miami–Fort Lauderdale–Pompano Beach Orlando–Kissimmee–Sanford Tampa–St. Petersburg–Clearwater	Baker, Clay, Duval, Nassau, and St. Johns Counties Broward, Miami-Dade, and Palm Beach Counties Lake, Orange, Osceola, and Seminole Counties Hernando, Hillsborough, Pasco, and Pinellas Counties
Georgia Atlanta–Sandy Springs–Marietta	Barrow, Bartow, Butts, Carroll, Cherokee, Clayton, Cobb, Coweta, Dawson, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Haralson, Heard, Henry, Jasper, Lamar, Meriwether, Newton, Paulding, Pickens, Pike, Rockdale, Spalding, and Walton Counties
Hawaii Honolulu	Honolulu County
Illinois Chicago–Joliet–Naperville	Cook, DeKalb, DuPage, Grundy, Kane, Kendall, Lake, McHenry, and Will Counties, IL; Jasper, Lake, Newton, and Porter Counties, IN; Kenosha County, WI

See footnote at end of table.

State and area	Definition
Indiana	
Indianapolis–Carmel	Boone, Brown, Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, Putnam, and Shelby Counties
Kentucky	
Louisville–Jefferson County	Bullitt, Henry, Jefferson, Meade, Nelson, Oldham, Shelby, Spencer, and Trimble Counties, KY; Clark, Floyd, Harrison, and Washington Counties, IN
Louisiana	
New Orleans–Metairie–Kenner	Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, and St. Tammany Parishes
Maryland	
Baltimore–Towson	Baltimore city, and Anne Arundel, Baltimore, Carroll, Harford, Howard, and Queen Anne's Counties
Massachusetts	
Boston–Cambridge–Quincy	Taunton city, and Berkley, Dighton, Easton, Mansfield, Norton, and Raynham towns in Bristol County; Beverly, Gloucester, Haverhill, Lawrence, Lynn, Methuen, Newburyport, Peabody, and Salem cities, and Amesbury, Andover, Boxford, Danvers, Essex, Georgetown, Groveland, Hamilton, Ipswich, Lynnfield, Manchester-by-the-Sea, Marblehead, Merrimac, Middleton, Nahant, Newbury, North Andover, Rockport, Rowley, Salisbury, Saugus, Swampscott, Topsfield, Wenham, and West Newbury towns in Essex County; Cambridge, Everett, Lowell, Malden, Marlborough, Medford, Melrose, Newton, Somerville, Waltham, Watertown, and Woburn cities, and Acton, Arlington, Ashland, Ayer, Bedford, Belmont, Billerica, Boxborough, Burlington, Carlisle, Chelmsford, Concord, Dracut, Dunstable, Framingham, Groton, Holliston, Hopkinton, Hudson, Lexington, Lincoln, Littleton, Maynard, Natick, North Reading, Pepperell, Reading, Sherborn, Shirley, Stoneham, Stow, Sudbury, Tewksbury, Townsend, Tyngsborough, Wakefield, Wayland, Westford, Weston, Wilmington, and Winchester towns in Middlesex County; Franklin and Quincy cities, and Avon, Braintree, Brookline, Canton, Cohasset, Dedham, Dover, Foxborough, Holbrook, Medfield, Medway, Millis, Milton, Needham, Norfolk, Norwood, Randolph, Sharon, Stoughton, Walpole, Wellesley, Westwood, Weymouth, and Wrentham towns in Norfolk County; Brockton city, and Abington, Bridgewater, Carver, Duxbury, East Bridgewater, Halifax, Hanover, Hanson, Hingham, Hull, Kingston, Lakeville, Marshfield, Middleborough, Norwell, Pembroke, Plymouth, Plympton, Rockland, Scituate, West Bridgewater, and Whitman towns in Plymouth County; Boston, Chelsea, and Revere cities, and Winthrop town in Suffolk County; Berlin, Bolton, Harvard, Hopedale, Mendon, Milford, Southborough, and Upton towns in Worcester County, MA; Nashua city, and Amherst, Brookline, Greenfield, Greenville, Hollis, Hudson, Litchfield, Merrimack, Milford, Mont Vernon, Pelham, and Wilton towns in Hillsborough County; Atkinson, Brentwood, Chester, Danville, Derry, East Kingston, Epping, Exeter, Fremont, Hampstead, Hampton Falls, Kensington, Kingston, Londonderry, Newfields, Newton, Plaistow, Raymond, Salem, Sandown, Seabrook, South Hampton, and Windham towns in Rockingham County, NH
Michigan	
Detroit–Warren–Livonia	Lapeer, Livingston, Macomb, Oakland, St. Clair, and Wayne Counties
Minnesota	
Minneapolis–St. Paul–Bloomington	Anoka, Carver, Chisago, Dakota, Hennepin, Isanti, Ramsey, Scott, Sherburne, Washington, and Wright Counties, MN; Pierce and St. Croix Counties, WI

See footnote at end of table.

Table C-2. Geographic boundaries of selected metropolitan areas—Continued

State and area	Definition
Missouri	
Kansas City	Bates, Caldwell, Cass, Clay, Clinton, Jackson, Lafayette, Platte, and Ray Counties, MO; Franklin, Johnson, Leavenworth, Linn, Miami, and Wyandotte Counties, KS
St. Louis ¹	St. Louis city, and Franklin, Jefferson, Lincoln, St. Charles, St. Louis, Warren, and Washington Counties, MO; Bond, Calhoun, Clinton, Jersey, Macoupin, Madison, Monroe, and St. Clair Counties, IL
Nevada	
Las Vegas–Paradise	Clark County
New York	
Buffalo–Niagara Falls	Erie and Niagara Counties
New York–Northern New Jersey–Long Island	Bronx, Kings, Nassau, New York, Putnam, Queens, Richmond, Rockland, Suffolk, and Westchester Counties, NY; Bergen, Essex, Hudson, Hunterdon, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, and Union Counties, NJ; Pike County, PA
Rochester	Livingston, Monroe, Ontario, Orleans, and Wayne Counties
North Carolina	
Charlotte–Gastonia–Rock Hill	Anson, Cabarrus, Gaston, Mecklenburg, and Union Counties, NC; York County, SC
Ohio	
Cincinnati–Middletown	Brown, Butler, Clermont, Hamilton, and Warren Counties, OH; Boone, Bracken, Campbell, Gallatin, Grant, Kenton, and Pendleton Counties, KY; Dearborn, Franklin, and Ohio Counties, IN
Cleveland–Elyria–Mentor	Cuyahoga, Geauga, Lake, Lorain, Medina Counties
Columbus	Delaware, Fairfield, Franklin, Licking, Madison, Morrow, Pickaway, and Union Counties
Dayton	Greene, Miami, Montgomery, and Preble Counties
Oklahoma	
Oklahoma City	Canadian, Cleveland, Grady, Lincoln, Logan, McClain, and Oklahoma Counties
Tulsa	Creek, Okmulgee, Osage, Pawnee, Rogers, Tulsa, and Wagoner Counties
Oregon	
Portland–Vancouver–Hillsboro	Clackamas, Columbia, Multnomah, Washington, and Yamhill Counties, OR; Clark and Skamania Counties, WA
Pennsylvania	
Philadelphia–Camden–Wilmington	Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, PA; Burlington, Camden, Gloucester, and Salem Counties, NJ; New Castle County, DE; Cecil County, MD
Pittsburgh	Allegheny, Armstrong, Beaver, Butler, Fayette, Washington, and Westmoreland Counties
Rhode Island	
Providence–Fall River–Warwick	Barrington, Bristol, and Warren towns in Bristol County; Warwick city, and Coventry, East Greenwich, West Greenwich, and West Warwick towns in Kent County; Newport city, and Jamestown, Little Compton, Middletown, Portsmouth, and Tiverton towns in Newport County; Central Falls, Cranston, East Providence, Pawtucket, Providence, and Woonsocket cities, and Burrillville, Cumberland, Foster, Gloucester, Johnston, Lincoln, North Providence, North Smithfield, Scituate, and Smithfield town in Providence County; Charlestown, Exeter, Hopkinton, Narragansett, North Kingstown, Richmond, and South Kingstown in Washington County, RI; Attleboro and Fall River cities, and North Attleborough, Rehoboth, Seekonk, Somerset, Swansea, and Westport towns in Bristol County; Bellingham and Plainville towns in Norfolk County; Blackstone and Millville towns in Worcester County, MA

See footnote at end of table.

Table C-2. Geographic boundaries of selected metropolitan areas—Continued

State and area	Definition
Tennessee	
Memphis	Fayette, Shelby, and Tipton Counties, TN; DeSoto, Marshall, Tate, and Tunica Counties, MS; Crittenden County, AR
Nashville-Davidson–Murfreesboro–Franklin	Cannon, Cheatham, Davidson, Dickson, Hickman, Macon, Robertson, Rutherford, Smith, Sumner, Trousdale, Williamson, and Wilson Counties
Texas	
Austin–Round Rock–San Marcos	Bastrop, Caldwell, Hays, Travis, and Williamson Counties
Dallas–Fort Worth–Arlington	Collin, Dallas, Delta, Denton, Ellis, Hunt, Johnson, Kaufman, Parker, Rockwall, Tarrant, and Wise Counties
Houston–Sugar Land–Baytown	Austin, Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, San Jacinto, and Waller Counties
San Antonio–New Braunfels	Atascosa, Bandera, Bexar, Comal, Guadalupe, Kendall, Medina, and Wilson Counties
Utah	
Salt Lake City	Salt Lake, Summit, and Tooele Counties
Virginia	
Richmond	Colonial Heights, Hopewell, Petersburg, and Richmond cities, and Amelia, Caroline, Charles City, Chesterfield, Cumberland, Dinwiddie, Goochland, Hanover, Henrico, King and Queen, King William, Louisa, New Kent, Powhatan, Prince George, and Sussex Counties
Virginia Beach–Norfolk–Newport News	Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg cities, and Gloucester, Isle of Wight, James City, Mathews, Surry, and York Counties, VA; Currituck County, NC
Washington	
Seattle–Tacoma–Bellevue	King, Pierce, and Snohomish Counties
Wisconsin	
Milwaukee–Waukesha–West Allis	Milwaukee, Ozaukee, Washington, and Waukesha Counties

¹ This is not the official definition of the St. Louis area. Excluded is the part of Sullivan city in Crawford County, MO.
