Current Employment Statistics
Highlights
November 2009

Bureau of Labor Statistics
December 4, 2009
Nonfarm payroll employment was essentially unchanged in November.

Since the start of this year, the magnitude of monthly job losses has decreased steadily. In the 3 months prior to November, total nonfarm saw an average job loss of 135,000, compared with job losses averaging 357,000 during the 3 months from May to July. From November 2008 to April 2009, payroll employment experienced the greatest monthly declines since the recession started, with monthly losses averaging 645,000.

Since the recession began in December 2007, payroll employment has declined by 7.2 million.
In November, total nonfarm employment decreased by 3.5 percent over the year, an improvement over the decreases of 4.2 percent in the years ending in July and August.
• In November, average weekly hours of production and nonsupervisory employees rose by 0.2 hour to 33.2 hours.

• Despite recent increases in the average workweek, it remains 0.6 hour lower than when the recession began in December 2007.

• The index of total private aggregate weekly hours rose by 0.6 percent in November. Despite the increase, aggregate weekly hours have fallen by 8.1 percent since reaching a peak in December 2007.
In November, average hourly earnings of production and nonsupervisory employees rose 1 cent to $18.74. Over the past year, average hourly earnings have risen by 2.2 percent. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) fell by 0.4 percent over the year ending in October.

The index of total private aggregate weekly payrolls rose by 0.7 percent in November. Since June, aggregate weekly payrolls have increased by 1.1 percent after falling 5.0 percent following a peak in August 2008.
• In November, payroll employment losses in construction, manufacturing, and information were offset by job gains in professional and business services and health care.

• Although, some industries are still experiencing employment declines, the losses are much smaller in recent months.
- Construction employment experienced a decline of 27,000 in November, smaller than the average monthly decline of 63,000 during the prior 6 months.

- Over the month, construction job losses were concentrated in nonresidential specialty trade contractors (-29,000).

- From a recent employment peak in January 2007 through December 2008, construction jobs losses were concentrated in the residential components. However, so far in 2009, nonresidential construction job losses have exceeded those seen in residential construction.
• In November, manufacturing shed 41,000 jobs, about in line with the trend over the prior 4 months, when manufacturing saw an average monthly employment decline of 47,000. Manufacturing lost jobs at a faster rate over the 9 months from October 2008 through June 2009, during which time 1.4 million jobs were cut. Factory jobs losses averaged 161,000 per month during that period.

• In November, there were notable job cuts in machinery, computer and electronic products, and printing.

• The factory workweek rose by 0.3 hour in November and has increased by 1.0 hour since May.
- Employment in information declined by 17,000 in November, larger than the average monthly decline of 6,000 during the prior 5 months. In November, telecommunications accounted for about half the decrease, and losses continued in publishing.
Employment in temporary help services rose by 52,000 in November. Since reaching a recent employment low in July, the industry has added 117,000 jobs.

Since 1990, peaks and troughs in temporary help services employment have preceded those of total nonfarm employment on 3 occasions—temporary help services reached a high point in 2000, 10 months before total nonfarm; hit a low point in 2003, 4 months before total nonfarm; and reached another high point in 2006, 12 months prior to total nonfarm.
• Health care employment continued to rise in November (+21,000).

• Home health care services and hospitals added 7,000 jobs each, accounting for the majority of November’s job gain.

• Although health care continues to add jobs, the rate of job growth has slowed. So far in 2009, employment has grown at an annualized rate of 2.0 percent. In the 3 years from 2006 through 2008, health care had averaged an annual growth rate of 2.7 percent.
