Adjustments to Household Survey Population Estimates in January 2006

reflect updated population controls. As part of its annual review of intercensal population estimates, the U.S. Census Bureau determined that a small downward adjustment should be made to the household survey population controls. This adjustment stems from revised estimates of net international migration and updated vital statistics information. The updated controls resulted in a decrease of 67,000 in the estimated size of the civilian noninstitutional population 16 years of age and over

for December 2005. Official population and labor force estimates for December 2005 and earlier months will not be revised.

A comparison of December 2005 data based on the old and new controls shows that the population adjustments caused decreases in the labor force (-130,000), employment (-123,000), and unemployment (-8,000). The total unemployment rate, labor force participation rate, and employment-population ratio, however, were not affected. (See table below.)

¹ Differences are calculated from unrounded estimates. NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not

presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.
