North Carolina location of Dell Products LP, Winston-Salem (WS–1) Division.

The amended notice applicable to TA–W–72,575 is hereby issued as follows:

“All workers of Dell Products LP, Winston-Salem (WS–1) Division, including on-site leased workers of Adecco, Spherion, Patriot Staffing, Manpower, TEKsystems, APN, ICONMA, and Staffing Solutions, South East, and Omni Resources and Recovery, Winston-Salem, North Carolina, who became totally or partially separated from employment on or after October 13, 2008 through March 1, 2012, and all workers in the group threatened with total or partial separation from employment on date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.”

Signed at Washington, DC, this 31st day of August 2010.

Del Min Amy Chen,
Certifying Officer, Office of Trade Adjustment Assistance.

EDS, an HP Company, A Subsidiary of Hewlett-Packard Company Including On-Site Leased Workers from Compuware Corporation, Detroit, Michigan; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on December 17, 2009, applicable to workers of EDS, an HP Company, a subsidiary of Hewlett-Packard Company, Detroit, Michigan. The notice was published in the Federal Register on February 16, 2010 (75 FR 7033).

At the request of the State agency, the Department reviewed the certification for workers of the subject firm. The workers are engaged in activities related to information technology (IT) outsourcing services.

New information shows that workers leased from Compuware Corporation were employed on-site at the Detroit, Michigan location of EDS, an HP Company, a subsidiary of Hewlett-Packard Company. The Department has determined that these workers were sufficiently under the control of the subject firm to be considered leased workers.

Based on these findings, the Department is amending this certification to include workers leased from Compuware Corporation working on-site at the Detroit, Michigan location of EDS, an HP Company, a subsidiary of Hewlett-Packard Company.

The amended notice applicable to TA–W–72,291 is hereby issued as follows:

All workers of EDS, an HP Company, a subsidiary of Hewlett-Packard Company, including on-site leased workers from Compuware Corporation, Detroit, Michigan, who became totally or partially separated from employment on or after September 11, 2008, through December 17, 2011, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed at Washington, DC this 9th day of September 2010.

Eliott S. Kushner,
Certifying Officer, Division of Trade Adjustment Assistance.

Amphenol Antenna Solutions, a Subsidiary of Amphenol Corporation, formerly known as Jaybeam Wireless, Including On-Site Leased Workers From Manpower, Accurate Staffing and Administaff, Inc. Hickory, NC; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on July 9, 2010, applicable to workers of Amphenol Antenna Solutions, a subsidiary of Amphenol Corporation, formerly known as Jaybeam Wireless, including on-site leased workers from Manpower and Accurate Staffing and Administaff, Inc., Hickory, North Carolina, who became totally or partially separated from employment on or after August 14, 2008, through July 9, 2012, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.”

Signed at Washington, DC, this 7th day of September 2010.

Eliott S. Kushner,
Certifying Officer, Division of Trade Adjustment Assistance.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR
Bureau of Labor Statistics
Summary of Comments

AGENCY: Bureau of Labor Statistics.

ACTION: Notice of comments received and final definition of green jobs.

SUMMARY: The Bureau of Labor Statistics (BLS) is responsible for developing and implementing the collection of new data on green jobs. The resulting information will be useful for evaluating policy initiatives and the labor market impact of economic activity related to protecting the environment and conserving natural resources. BLS activities also will be useful to State...
In response to the March 16, 2010, Federal Register Notice, BLS received 156 comments. The largest number of comments was from business or industry associations (44 comments), followed by State workforce agencies (22), private employers (20), labor unions (16), individuals (15), other State or local government (14), academic or research organizations (9), Federal agencies (8), and nonprofit organizations (8). BLS reviewed and considered all comments and made certain changes in the green jobs definition and industry list, as described below.

In the March 16, 2010, Federal Register Notice, BLS requested comments and recommendations from the public on the definition, industry list, or any other aspect of the information provided in the notice. BLS was interested in comments on:

1. Whether the definition of green jobs is clear and understandable.
2. The comprehensiveness of the definition, including the composition of the set of economic activities in which green jobs are involved and the types of green goods and services.
3. Whether the distribution of green goods should be included as green services.
4. Whether the preparation and sale of organic food by restaurants and food service industries should be included as green services.
5. Whether the definition of green jobs is clear and understandable. Three comments asked for clarification of the broad definition of green jobs. One comment noted that, by using both the output and process approaches, BLS is trying to encompass the broadest definition of green jobs, although one would want to know the degree of overlap between the two approaches. BLS agrees this overlap is of interest; the data BLS will collect will provide an indication but not a direct measure of the overlap.
6. One comment questioned whether certain workers would be included, such as a sustainability manager in a business that is not producing a green good or service. BLS responds that jobs with the titles listed in the comment would be captured by either of the two measurement approaches, depending on where these jobs occur.

BLS notes that its green jobs definition is not based on skill differences for workers involved in distributing green goods versus those distributing other goods. In response, BLS notes that its green jobs definition is not based on skill differences, but instead on the environmental impact of the good or service produced or the production process used. Several comments expressed concerns about the feasibility and cost of data collection in the distribution sectors.

Ten comments recommended including distribution only on the basis of whether the distribution process is green (e.g., use of energy-efficiency vehicles). BLS responds that distribution activities conducted using environmentally friendly production processes will be addressed in the process approach to data collection.

Eight comments recommended including distribution. One commenter noted that their State green jobs survey had identified jobs in the transportation industry and related occupations. BLS notes that it is unclear in this State survey whether these jobs were reported because of the nature of the good being transported or the nature of the production process.

Five comments recommended including distribution but narrowing the...
scope of what is included. These comments would narrow the scope
variously, such as limited to “the extent
a distributor deals predominantly or
exclusively in green goods;” only if “the
primary function is green related;” only
if “the overall net impact of those jobs
is positive or neutral at best;” and if “the
distribution costs for that percentage
of the business should be included.”

Three comments recommended BLS
investigate local and regional food
networks or include locally produced
foods as green. BLS responds that food
producers who distribute locally and
businesses that purchase locally
produced food have adopted an
environmentally friendly process that
will be covered in the process survey.

BLS has determined to exclude
distribution of green goods from its
definition of green goods and services.
Transporting or selling a green good has
no apparent benefit to the environment
compared to transporting or selling any
other good.

**Whether the preparation and sale of
organic food by restaurants and food
service industries should be included as
green services.** Twenty-two comments
responded to this question. The
proposed BLS definition includes
services classified in Accommodation
and Food Services industries such as
restaurants, caterers, and cafeterias.

Ten comments recommended
excluding this activity from the
definition of green goods and services.
Generally, these comments noted that
the environmental benefit of organic
food is in the production stage, not in
the preparation and sale. Several
comments expressed concerns that
including this activity would lead to
overcounting the number of green jobs.

One comment that recommended
excluding this activity noted an
inconsistency in the proposed definition
in the treatment of organic food
products versus goods containing
recycled inputs. BLS agrees with this
comment and has addressed this
inconsistency in its final definition.

Eight comments recommended
including this activity. One comment
said the reason was to encourage the
growth of organic farming; BLS
responds that it does not have an
advocacy position on organic farming.
One comment noted that the purchase
and end use is as important as
production of organic products because
without the buyers and markets, no
organic food exist. One comment noted
environmental impacts in this
category, i.e., using fresh versus
packaged food, reduces packaging waste
and using composting practices diverts
waste from the landfill. BLS notes that
these practices are not inherent to
organic foods.

Three comments recommended
including this activity only on the basis
of whether the process is green; another
comment said that if the activity is
counted as a green service, then it
should not be counted in the process
approach.

BLS has determined to exclude
preparation and sale of organic food
from its definition of green goods and
services. Preparing or selling organic
goods has no apparent benefit to the
environment compared to preparing or
selling other food.

**Need for a standardized definition of
green jobs.** Thirteen comments noted
the need for a standardized national
definition of green jobs, and some
comments indicated an expectation that
the BLS definition would be adopted for
other than statistical purposes. BLS
responds that it is developing the
definition of green jobs only for use in
collecting and analyzing data. Other
uses of the definition have played no
role in its development.

**Job quality and worker characteristics.**
Eleven comments expressed concerns
about the statement in the Federal
Register Notice that the definition does
not consider job aspects unrelated to the
work itself, such as wages, union
membership, benefits, or career ladders.
Some of these comments urged BLS to
use criteria such as worker health and
safety, wages and benefits, and career
pathways. BLS responds that using such
criteria would require BLS to determine,
for example, what level of worker safety
is high enough for the job to be included
as a green job. Making such
determinations would be inappropriate
for a statistical agency, which must
refrain from policy advocacy to
maintain its credibility among data
users. However, data users may make
use of information on worker safety,
wages, and other topics to select jobs
from the BLS data that meet their own
criteria regarding these topics.

Two comments cited the need for
demographic characteristics of workers
in green jobs. BLS does not plan to
collect demographic data in its surveys.
However, users may be able to
supplement the BLS green jobs data
with demographic data from other
sources.

**Categories of green economic activity:**

**General comments.** Three comments
addressed the categories of green
economic activity. One comment
recommended including “operation and maintenance” in each
instance where development and
implementation are listed. BLS agrees
that green goods maintenance services
should be included and has changed the
descriptions for the relevant categories.
One comment noted that the
categories are highly integrated and not
necessarily independent. BLS agrees
with this comment. The categories do
overlap and are not intended to be
mutually exclusive. The purpose of the
categories is to establish the scope of
green jobs. BLS may decide to tabulate
data from the green goods and services
survey according to these categories,
recognizing that such a tabulation
would sum to greater than the total
number of green jobs identified, and
requires clear explanation to data users.
Alternatively, BLS could assign each
industry where green goods or services
are produced to only one category, so
the categories sum to the total number
of green jobs identified.

One comment supported the use of
“reduction” throughout the definition,
noted that this addresses the
the goal of environmental sustainability and
climate stability. The comment stated
that “while the seven economic
activities are comprehensive * * * they
do not capture the underpinnings of
business and industry that create these
economic activities and their associated
environmental outcomes. It would help
to articulate the management policies and
operational systems that lead to
these outcomes.” BLS responds that it is
unclear how the commenter would
change the definition or data collection.

BLS has determined to consolidate
the seven categories into five categories
for green goods and services and four
categories for environmentally friendly
production processes. Additionally, BLS
has determined to modify the term
categories of green economic activity” to
categories of green goods and
services” and “categories of green
technologies and practices used within
establishments.” See Appendix II of this
notice.

**Category 1. Renewable energy.** Five
comments addressed category 1. One
comment recommended that BLS merge
this category with categories 2 (energy
efficiency) and 3 (greenhouse gas
reduction), creating a single “clean
energy” category, with the proposed
category addressing only energy
systems. BLS has determined to merge
certain categories, as described in
Appendix II of this notice. These
decisions do not affect category 1,
however.

One comment recommended that BLS
modify the description to show the
sources of renewable energy consistent
with the statutory definition. BLS has
modified the description to reflect the sources listed in Section 203(b) of the Energy Policy Act of 2005, with the exception of the qualification of hydropower. The statutory definition includes as renewable only "new hydroelectric generation capacity achieved from increased efficiency or additions of new capacity at an existing hydroelectric project." BLS finds this qualification too complex to be used in employment surveys and therefore includes all hydroelectric generation as a green good. In response to this comment, BLS has changed the description to add landfill gas and municipal solid waste as renewable sources, and remove hydrogen fuel cells.

One comment recommended that the description include installation and maintenance. BLS agrees that these activities are included and has modified the description accordingly. One comment asked whether trading of certificates and offsets is included. BLS responds that these activities are included. They could be placed in categories for renewable energy, pollution reduction and cleanup, or greenhouse gas reduction, depending on what is being traded.

One comment recommended that BLS expand the description to include "construction workers who build and install technologies that harness or collect renewable energy." BLS responds that these workers are included in the proposed definition, and should be identified in the data collection.

Category 2, Energy efficiency. Four comments addressed category 2. Two comments recommended that BLS clarify where energy storage and distribution are categorized, including the electric power grid and battery technologies, and whether BLS intends to distinguish between the storage and distribution of energy from renewable sources versus energy from other sources.

BLS has determined to categorize improving the efficiency of the electric power grid, including Smart Grid technologies, in category 2. BLS has also determined that electric power distribution services are not included as a green service, similar to its decision on distribution of other green goods and services as discussed above.

One comment recommended that BLS break out transportation efficiency and other sources of efficiency. BLS responds that it does not see a need for this breakout.

One comment asked that BLS clarify whether this category means to include "energy efficiency products" not "energy-efficient production of any product." BLS responds that both "energy efficiency products" and "energy-efficient production of any product" are included, with the latter identified as an environmentally friendly production process. The revised presentation of the categories makes this clearer.

Category 3, Greenhouse gas reduction. Five comments addressed category 3. One comment stated agreement with the inclusion of research and development activities in this category. One comment recommended moving nuclear energy to category 1, renewable energy. BLS responds that nuclear power is not renewable energy, as the fuel source is not renewable.

Two comments supported including nuclear energy in this category, while one comment opposed including nuclear energy as a source of green jobs. One comment supporting inclusion of nuclear energy recommended keeping it as a separate category for data tabulation, as many stakeholders will likely reject energy as a source of green jobs. BLS responds that it intends to tabulate data from the green jobs surveys by NAICS industry, which should result in presentation of data specifically for NAICS 221113 Nuclear electric power generation as well as other NAICS categories, providing transparency and allowing users to exclude sectors for their own purposes.

BLS continues to include nuclear energy in the final definition on the basis of lower greenhouse gas emissions relative to other major sources of electric power.

One comment recommended eliminating "reduction of GHG emissions in electricity from fossil fuels" from this category, noting that "every fossil fueled power plant * * * is or will soon be trying to make incremental improvements to its emissions intensity, but that activity will not 'green' the fossil fuel industry and nor will it qualify the associated power plants as 'green energy.'"

Another comment supported including this activity, noting that "energy production includes jobs that design and apply cleaner technologies to coal such as gasification, pyrolysis, and carbon capture and sequestration (CCS). CCS is still under development but our definition includes efforts that seek to reduce adverse impacts of coal in the near future while the country works to develop clean, renewable energy sources." BLS responds that activities in the fossil fuel industry to make incremental improvements to its emissions intensity represent establishing environmentally friendly production processes and should be measured in the BLS green process survey. BLS also notes that the proposed definition includes research and development of CCS as a green activity, and the planned surveys should identify this activity, depending on where it is being performed.

Category 4, Pollution reduction and cleanup. Five comments addressed category 4. These comments generally supported the category and recommended including the words "prevention" and/or "elimination" in the description. BLS agrees with this recommendation and has revised the description accordingly.

One comment recommended merging category 4 and category 5 (recycling and waste reduction), noting that there is some overlap in the categories. BLS has determined to merge certain categories, as described in Appendix II of this notice. This decision combines categories 3, 4 and 5 into one category.

Category 5, Recycling and waste reduction. Forty-four comments addressed category 5. These comments generally recommended adding certain activities to the description, specifically reuse (29 comments), remanufacturing (23), composting (22), reduction or elimination (7), deconstruction (4), repair (2), and demanufacturing (1). BLS has revised the description to include reuse, remanufacturing, composting, and avoiding creation of waste materials. "Reuse" includes reuse of building materials.

One comment recommended creation of new NAICS codes related to composting. BLS responds that revising the NAICS is outside the scope of the BLS green jobs initiative.

One comment recommended that recycled goods be included only on evidence that they typically had previously entered the waste stream; another comment recommended the category recognize producer responsibility for recycling product at end of life. BLS responds that, while these suggestions may have merit, they are more complex than BLS data collection processes could reasonably identify.

One comment recommended rewording the description to include greater detail about the nature of recycling. BLS responds that it does not believe this additional detail is needed.

One comment recommended rewording to include stormwater management. BLS agrees with this recommendation and has included stormwater management in the natural resources conservation category.

Two comments opposed including solid waste landfills, incineration, waste-to-energy, or landfill-to-energy
activities as green activities. BLS responds that it has added municipal solid waste and landfill gas as sources of renewable energy, consistent with the statutory definition of renewable energy sources.

Category 6. Agriculture and natural resources conservation. Eighteen comments addressed category 6. Fourteen of the comments concerned the inclusion of additional NAICS industries on the industry list in the area of forestry and wood products, specifically 113110 Timber Tract Operations, and manufacturing industries related to wood and paper products. BLS has added timber tract operations to the list of industries producing green goods and services, based on timber tracts producing timber meeting sustainable forestry standards.

BLS continues to include on the industry list industries producing certain wood products meeting standards, such as LEED-eligible construction materials. One comment criticized the use of the LEED standard to identify green wood products and recommended alternative standards. BLS is examining the recommended standards.

One comment recommended this category include activities that take place in urban areas. BLS agrees that activities in urban areas are included; the key is environmental impact of the activity, not where it occurs.

Two comments asked for clarification of the term “natural resources conservation.” One comment recommended that the category include land management and water conservation. BLS agrees that these activities are included; they are specifically mentioned in the description for this category.

Category 7. Education, compliance, public awareness, and training. Eight comments addressed category 7. Two comments supported including this category. One comment called for deleting the category, stating that “all industries perform these as a public service and academia trains in them as its mission. Compliance is a regulatory and process review activity, not an economic one—no good or service is produced.” BLS responds that education and compliance are services industries recognized in the NAICS.

One comment recommended adding “internally within the organization” in addition to the point of raising public awareness. One comment noted that this category does not denote any green function, but agrees that the jobs meant to be included are green. This comment proposed counting jobs in this category under each of the preceding categories, depending on the type of training provided. BLS has determined to retain a separate category for education and compliance goods and services, as some of these outputs span across two or more of the preceding categories. BLS has determined to drop this category from the categories of environmentally friendly production processes, and to include training of an establishment’s staff or contractors in application of environmentally friendly technologies and practices in the remaining four categories.

One comment recommended the category be more open to allow respondents to include themselves, e.g., add ‘other’ or ‘similar services.’ BLS responds that, if these categories are presented on data collection forms for either the green goods and services survey or the process survey, an “other” response may be provided.

One comment stated that it was unclear what types of jobs would count. BLS responds that the approach is under development and will be specified on the data collection instruments.

One comment recommended that health and safety education and compliance related to green jobs may deserve special notice within this category. BLS does not see how health and safety education and compliance related to environmental problems has a beneficial impact on the environment.

Comments recommending additional categories. Seven comments recommended adding new categories. Two comments recommended adding a category “Environmental health” to cover work to protect public health and worker health from the adverse effects of environmental problems. For the reason given in the paragraph above, BLS rejected this suggestion.

Two comments recommended adding a category “Sustainable design, construction, and operations.” BLS responds that these activities are related to energy efficient building design, construction, and operation, and are covered in the category 2, Energy efficiency.

One comment recommended adding a category “Emission inventory management and trading and compliance.” With the clarification that emission offset trading is included as a green activity (see discussion of category 1, above), BLS has addressed this comment.

One comment recommended adding a category for the transportation sector, mentioning equipment manufacturing, public transportation and maintenance, public transit infrastructure, and all road construction involved in repair “as long as those construction projects are linked to greenhouse gas emissions reductions and/or oil savings goals.” BLS responds that the definition of green goods and services includes the equipment manufacture and public transit topics. Some road construction activities are also included; it does not seem feasible to use the suggested criterion in BLS data collection.

One comment recommended adding a category “Water efficiency” similar to “Energy efficiency,” noting that the proposed categories mainly focus on energy, and that water is not included except for the mention of water conservation in category 6. The comment recommended including activities such as water conservation, drinking water protection, and stormwater management. BLS responds that the recommendation appears to be an elaboration of “water conservation” which is already included in the natural resources conservation category, and wastewater management, which is included in the pollution reduction category. Stormwater management has been added to the description for the natural resources conservation category.

Types of green goods and services, general comments. Ten comments generally addressed the definition of green goods and services, with a focus on the extent to which the supply chain or production chain is included in the BLS definition.

Most comments recommended including all of the “supply chain” or all stages from inputs to final sale. One comment, however, noted that “going too far down the chain reduces the ‘greenness’ of the good because it could be shipped, stored, or sold with many other nongreen goods.”

Two comments pointed out inconsistencies in the treatment of organic food products versus recycled inputs. The proposed BLS definition includes organic food products from specialized inputs through specialized distribution and sale, while recycled products are included only up to the stage where the recycled inputs are introduced.

BLS notes that including the entire production chain is difficult for products other than organic foods, which carry a specific certification label, and would greatly expand the list of industries in which green goods are classified. These comments also relate to the question about whether to include distribution of green goods as a green service, discussed above.

BLS has determined to drop the use of the four types of green goods and services from its final definition.
comments indicated that these types were not clear or helpful to data users.

Direct green goods and services. One comment addressed treatment of Recyclable Material Merchant Wholesalers in the NAICS. BLS responds that revising the NAICS is outside the scope of the BLS green jobs initiative. However, this NAICS industry is included in the industry list as producing a green service.

Indirect green goods and services. Two comments addressed indirect green goods and services. One comment said the qualifier “favorable * * * relative to other goods” is vague. BLS responds that it intends, where possible, to use existing Federal or industry standards to make this qualifier more specific. BLS also notes that, without the “relative” qualifier, it would have little or no basis to make a distinction between green and nongreen goods or services that are not “direct” and would exclude a large number of products and services that are generally considered green.

One comment said the distinction between direct green products and indirect green products seems unclear: For example, why is weatherizing a building directly green, but producing renewable energy is indirectly green? BLS responds to this example by noting that weatherization is conducted specifically for an environmental purpose, the definition of a direct good or service. Producing renewable energy is conducted to produce electricity, but has an environmental benefit, and thus fits the definition of an indirect green good or service.

Specialized inputs. One comment recommended that specialized inputs be rolled into indirect green goods and services, noting that examples such as USDA approved fertilizers, wind turbine blades, and mass transit rail cars fit the definition of indirect, i.e., they are “produced for another purpose, but when produced, consumed, or scrapped have a favorable impact on protecting the environment or conserving natural resources.”

Standards. Twenty-six comments addressed the BLS plan to use existing Federal or industry standards to identify indirect green goods and services. Most of these comments suggested specific standards for BLS to consider or commented on the standards listed in the Federal Register Notice as examples. BLS finds these comments very helpful.

II. Definition of Green Jobs BLS Will Use for Data Collection

In response to comments received on the proposed definition, as well as additional considerations, BLS has revised the definition of green jobs. The final definition will be used in data collection beginning in FY 2011, and is presented below, following a discussion of the nature of the changes.

Categories of green jobs. BLS has changed the term “categories of green economic activity” to “categories of green goods and services” and “categories of green technologies and practices used within establishments.” BLS has revised the name of category 1 to “Energy from renewable sources.” BLS has revised the description of category 2, “Energy efficiency,” to include improving the efficiency of energy storage and distribution, including Smart Grid technologies.

BLS has combined categories 3 (greenhouse gas reduction), 4 (pollution reduction and cleanup), and 5 (recycling and waste reduction) into one category, now labeled “category 3. Pollution reduction and removal, greenhouse gas reduction, and recycling and reuse.” Combining these categories reduces to some extent the overlap among categories. The description for this category has been edited to include mention of eliminating emissions of pollutants and to include reuse, remanufacturing, composting, and avoiding creation of waste materials.

BLS has revised the title of category 4 (formerly category 6) to “Natural resources conservation.”

BLS has edited the descriptions of categories 1 through 4 (formerly 1 through 6) to include the terms research and development, installation, and maintenance.

BLS has revised the title of category 5 (formerly category 7) to “Environmental compliance, education and training, and public awareness.” This category now appears only in relation to green goods and services.

Types of green goods and services. BLS has dropped the use of the four types of green goods and services (direct, indirect, specialized inputs, and distribution). BLS has excluded distribution of green goods from its definition of green jobs. Final BLS definition of green jobs. BLS has developed this definition of green jobs for use in data collection in two planned surveys.

Green jobs are either:

A. Jobs in businesses that produce goods or provide services that benefit the environment or conserve natural resources.

B. Jobs in which workers’ duties involve making their establishment’s production processes more environmentally friendly or use fewer natural resources.

The BLS approach to identifying each type of green job for measurement purposes is described in more detail below. The planned BLS surveys may identify and count some jobs in both surveys.

A. Jobs in businesses that produce goods and provide services that benefit the environment or conserve natural resources. These goods and services are sold to customers, and include research and development, installation, and maintenance services. This definition will be used in the BLS survey of establishments in industries that produce green goods and services. Green goods and services fall into one or more of five groups:

1. Energy from renewable sources. Electricity, heat, or fuel generated from renewable sources. These energy sources include wind, biomass, geothermal, solar, ocean, hydropower, landfill gas, and municipal solid waste.

2. Energy efficiency. Products and services that improve energy efficiency. Included in this group are energy-efficient equipment, appliances, buildings, and vehicles, as well as products and services that improve the energy efficiency of buildings and the efficiency of energy storage and distribution, such as Smart Grid technologies.

3. Pollution reduction and removal, greenhouse gas reduction, and recycling and reuse. These are products and services that:
   - Reduce or eliminate the creation or release of pollutants or toxic compounds, or remove pollutants or hazardous waste from the environment.
   - Reduce greenhouse gas emissions through methods other than renewable energy generation and energy efficiency, such as electricity generated from nuclear sources.
   - Reduce or eliminate the creation of waste materials; collect, reuse, remanufacture, recycle, or compost waste materials or wastewater.

4. Natural resources conservation. Products and services that conserve natural resources. Included in this group are products and services related to organic agriculture and sustainable forestry; land management; soil, water, or wildlife conservation; and stormwater management.

5. Environmental compliance, education and training, and public awareness. These are products and services that:
   - Enforce environmental regulations.
   - Provide education and training related to green technologies and practices.
   - Increase public awareness of environmental issues.
B. Jobs in which workers’ duties involve making their establishment’s production processes more environmentally friendly or use fewer natural resources. These workers research, develop, maintain, or use technologies and practices to lessen the environmental impact of their establishment, or train the establishment’s workers or contractors in these technologies and practices. This definition will be used in the BLS survey of establishments across all industries to identify jobs related to green technologies and practices used within the establishment. These technologies and practices fall into one or more of four groups:

1. **Energy from renewable sources.** Generating electricity, heat, or fuel from renewable sources primarily for use within the establishment. These energy sources include wind, biomass, geothermal, solar, ocean, hydropower, landfill gas, and municipal solid waste.

2. **Energy efficiency.** Using technologies and practices to improve energy efficiency within the establishment. Included in this group is cogeneration (combined heat and power).

3. **Pollution reduction and removal.** Through methods other than renewable energy generation and energy efficiency. This includes reducing greenhouse gas emissions, hazardous waste from the environment, and stormwater management.

4. **Natural resources conservation.** Using technologies and practices within the establishment to conserve natural resources. Included in this group are technologies and practices related to organic agriculture and sustainable forestry; land management; soil, water, or wildlife conservation; and groundwater management.

### III. Summary of Comments on Identifying Industries Where Green Goods and Services Are Classified and the Approach BLS Will Use for Data Collection

Forty-seven comments recommended adding a total of 371 detailed NAICS industries to the list of industries where green goods and services are classified. Six comments recommended dropping an additional 18 NAICS industries from the list. Numerous comments addressed certain details on the industry list.

BLS notes that many of the comments were based on whether establishments in the industry may use environmentally friendly production processes, rather than whether the product or service meets the BLS definition of a green product or service. The purpose of the industry list is only to identify industries where green goods and services are classified.

A large number of the industries were recommended for addition to the list based on the use of recycled inputs, such as numerous fabricated metal products industries that may use recycled metals. BLS notes that recycled products are included only up to the stage where the environmental impact occurs, and do not include products fabricated from materials containing recycled content. Therefore BLS has not added these industries to the list.

Some comments requested changing the type of green good or service from indirect to direct, apparently based on a belief that direct green goods or services are preferred over other types of green goods or services. BLS notes that the direct and indirect types were used as criteria for determining what goods or services to include as green, and indicate no hierarchy or preference. These types are not included in the final definition.

BLS has revised the industry list to be consistent with the final definition of green jobs and in light of its review of comments recommending inclusion or exclusion of specific industries. The revised list is published at [http://www.bls.gov/green](http://www.bls.gov/green), along with a separate list showing the industries added or dropped from the list published with the March 16, 2010, Federal Register Notice. The following table presents the industry sector distribution of business establishments that potentially produce green goods and services. The establishment counts represent the number of establishments eligible for sample selection for the green goods and services survey. The approximately 2.2 million eligible establishments compare to a total of 9.0 million establishments on the BLS business list in 2009. The number of establishments that potentially produce green goods and services could change over time as industries currently offering green goods and services grow or decline, or as new or different industries begin to produce green goods and services.

#### NUMBER AND PERCENT DISTRIBUTION OF ESTABLISHMENTS IN INDUSTRIES WHERE GREEN GOODS AND SERVICES ARE CLASSIFIED, BY INDUSTRY SECTOR, 2009

In general, the BLS approach is to designate as green those goods and services that directly benefit the environment or preserve natural resources. The BLS approach does not (automatically) designate as green the goods and services produced by industries that supply inputs to or distribute the outputs from green producing industries. Instead, BLS first evaluates those supplier and distributor industry goods and services for whether...
they directly benefit the environment or preserve natural resources. Green goods and services may be sold to intermediate demand or to final demand.

IV. Summary of Comments on Plans To Measure Green Jobs and BLS Response

BLS received comments on its approach to measuring green jobs and specific measurement plans. These comments are summarized in this Appendix, and the BLS response is indicated.

General measurement approach. One comment expressed unqualified support for the output and process approaches. Two comments disagreed with the BLS approach. One of these comments recommended using the O*NET categories and focusing on occupations in the output approach. BLS responds that the O*NET program in the Employment and Training Administration is developing information on green jobs and an effort by BLS to collect similar data would be duplicative. Further, data users will be able to use O*NET information in conjunction with the BLS green jobs data, since both sources use the Standard Occupational Classification.

One comment disagreed with the BLS approach recommended that “BLS make it clear that this is a ‘green firm survey’ and not a ‘green jobs survey’” and that “the BLS is more concerned with measuring jobs created by the demand for green products and not necessarily green jobs per se.” BLS responds that it is referring to the survey to be used in the output approach as the “green goods and services survey.”

Three comments pointed out that the BLS approach will miss green goods and services produced by firms classified in NAICS industries excluded from the list. Establishments are classified into NAICS industries based on the goods or services that account for the majority of their revenue. Establishments not classified into an industry on the BLS list will not be included in the green goods and services survey: if a minority of their revenue is from a green good or service, these goods or services and the jobs related to them will not be identified. BLS is aware of this limitation and notes that how large this limitation may be is unknown.

Use of share of revenue to apportion share of jobs. In the green goods and services survey, for establishments that produce both green and nongreen goods or services, BLS proposed to capture the share of establishment revenue received from the sale of green goods or services. (An alternative to revenue will be used for nonmarket sectors.) BLS plans to use the revenue share as a proxy for the share of the establishment’s employment associated with the production of green goods and services.

Fifteen comments agreed with use of revenue, and seven comments disagreed. Both types of comments cited collectability and respondent burden as reasons for their agreement or disagreement. Some comments disagreeing with the approach questioned whether the result would overestimate the number of green jobs, and said the results would be difficult to interpret. BLS responds that its field research to date indicates that respondents are generally able to provide share of revenue information and this information is more readily available than share of employment. BLS also notes that this result is similar to the experience of Statistics Canada in its environmental surveys.

Eleven comments pointed out limitations of the revenue share approach. BLS measures (employment, hours, task proportions, degree of shift to green practices or sustainability), recommended attempting to collect employment as well as revenue, and/or recommended field testing. BLS responds that it is conducting field testing of both share of revenue and share of employment, and that the collection of hours, task proportions, or degree of shift to green practices or sustainability would be more difficult to collect than shares of revenue or employment.

One comment recommended that, regarding electric power distribution jobs associated with “clean energy,” BLS count jobs associated with transmission and distribution as proportional to the quantity of clean energy flowing on the grid. Consistent with its decision to exclude distribution of green goods from the definition of green services, BLS has determined that the operation of the electric power grid is not included as a green good or service. However, goods and services or processes that improve the efficiency of energy storage and distribution, such as Smart Grid technologies, are included in category 2, energy efficiency. Construction of the power transmission facilities to connect new renewable energy sources to the grid is included in category 1, energy from renewable sources.

Coverage and sampling frame. green goods and services survey. Three comments addressed the coverage and sampling frame for the green goods and services survey. One comment expressed the view of the self-employed. BLS responds that this limitation is imposed by nature of the BLS business list that will be used as the sampling frame.

One comment recommended that, for the construction industry, BLS should rely on a sampling frame of projects, not establishments. BLS responds that such a frame is not available and would result in data based on a different concept than for other industries.

One comment suggested that BLS work with the National Agricultural Statistics Service (NASS) if BLS has a need to expand coverage of farms beyond the BLS business list, where coverage of agriculture production is limited. BLS has determined that the scope of its green jobs data collection will be wage and salary employment within the scope of the Quarterly Census of Employment and Wages (QCEW) program, except private households. All NAICS industries in this scope will be surveyed in the process survey; only those NAICS industries identified as producing green goods or services will be surveyed in the goods and services survey. While QCEW coverage of NAICS Sector 11 Agriculture, Forestry, Fishing and Hunting is not as complete as in most other industries, BLS believes it is comprehensive enough for purposes of green jobs data collection.

Measuring occupational employment and wages. Six comments addressed the collection of occupational data from establishments in the green goods and services survey. Certain of these comments indicate that the Federal Register Notice did not provide sufficient description of the plans concerning occupational data collection. BLS responds that it intends to collect an Occupational Employment Statistics (OES) schedule from establishments sampled for the green goods and services survey. These responses will allow estimation of occupational staffing patterns, employment, and wages for those establishments reporting green goods or services and for those not reporting such goods or services. BLS has not yet developed the specific estimation methods to account for establishments that report producing both green and nongreen goods or services.

One comment recommended that survey respondents be asked directly to identify the job titles of positions that meet the BLS definition of “green.” BLS responds that, in the process survey, respondents may be asked to provide job titles, which would be coded using the SOC. For the occupations of jobs related to production of green goods and services, however, the BLS survey procedures will be used, which do not ask respondents for job titles.
One comment stated that determining green job occupations based on OES assumes that green jobs are distributed throughout the workforce in the same proportion by occupation as all jobs. The commenter stated that results of their State survey indicated that green jobs seem to be widely disbursed, but are more concentrated in construction and extraction, production, and farming and fishing occupations. BLS responds that occupational employment will be estimated using OES data for specific establishments, according to whether or not they produce green goods or services. This is different from using OES estimates for overall employment.

Two comments concurred the BLS plan to count jobs in all occupations in the establishment in the green goods and services survey, with one comment agreeing and one comment saying there is “no need to count support jobs, such as accountants or administrative staff, because their job duties are not affected directly by the green product or service and thus they do not require additional training.” BLS notes that its green jobs definition is not based on skill differences, but instead on the environmental impact of the good or service produced or the production process used. However, data users can select the occupations they wish to consider for training offerings from those BLS identifies as occurring in establishments producing green goods and services. The O’NET green occupations taxonomy should be useful in this type of analysis.

Data by public ownership. One comment encouraged BLS to generate data that identify the level of public sector green employment in the NAICS-defined industries and the characteristics of the public sector green jobs. BLS responds that it intends to provide data from the green goods and services survey by public versus private ownership.

Process approach to measuring green jobs. BLS plans to develop a special employer survey to test the feasibility of collecting data on jobs associated with use of environmentally friendly production processes. Environmentally friendly production processes and practices are those that reduce the environmental or natural resources impact resulting from production of any good or service. These production processes include (1) production of green goods and services for use within the establishment, and (2) use of technologies and practices that have a positive environmental or natural resources conservation impact.

Sixteen comments addressed the process approach. Five comments supported using this approach and one comment recommended against. Three of these comments emphasized that all industries should be included in the process survey. BLS responds that, as stated in the March 16, 2010, notice, the scope of the process survey will be all industries.

Six comments indicated the need for more clarity in the process approach. BLS responding that the approach is under development and will be described in a future notice.

Two comments recommended using product life-cycle criteria for identifying green goods, with one of these comments suggesting that “a ‘green good’ and a good produced with ‘green processes’ will become increasingly indistinguishable in the marketplace among the leading experts and stakeholders in the sustainable products field.” BLS responds that applying life-cycle criteria or identifying “sustainable” products is not feasible in its data collection.

Signed at Washington, DC, this 26th day of August 2010.

DEPARTMENT OF LABOR

Employment and Training Administration

Notice of Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for trade adjustment assistance for workers by (TA–W) number issued during the period of August 30, 2010 through September 3, 2010.

In order for an affirmative determination to be made for workers of a primary firm and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(a) of the Act must be met.

I. Under Section 222(a)(2)(A), the following must be satisfied:
(1) A significant number or proportion of the workers in such workers’ firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) The sales or production, or both, of such firm have decreased absolutely; and

(3) One of the following must be satisfied:
(A) Imports of articles or services like or directly competitive with articles produced or services supplied by such firm have increased;
(B) Imports of articles like or directly competitive with articles into which one or more component parts produced by such firm are directly incorporated, have increased;
(C) Imports of articles directly incorporating one or more component parts produced outside the United States that are like or directly competitive with imports of articles incorporating one or more component parts produced by such firm have increased;
(D) Imports of articles like or directly competitive with articles which are produced directly using services supplied by such firm, have increased; and

(4) The increase in imports contributed importantly to such workers’ separation or threat of separation and to the decline in the sales or production of such firm; or

II. Section 222(a)(2)(B) all of the following must be satisfied:
(1) A significant number or proportion of the workers in such workers’ firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) One of the following must be satisfied:
(A) there has been a shift by the workers’ firm to a foreign country in the production of articles or supply of services like or directly competitive with those produced/supplied by the workers’ firm;
(B) there has been an acquisition from a foreign country by the workers’ firm of articles/services that are like or directly competitive with those produced/supplied by the workers’ firm; and

(3) The shift/acquisition contributed importantly to the workers’ separation or threat of separation.

In order for an affirmative determination to be made for adversely affected workers in public agencies and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(b) of the Act must be met.

(1) A significant number or proportion of the workers in the public agency have become totally or partially separated, or are threatened to become totally or partially separated;
