OCCUPATIONAL SAFETY AND HEALTH DATA USERS' WORKSHOP
BLS OCCUPATIONAL SAFETY AND HEALTH STATISTICS

The Bureau of Labor Statistics (BLS) Occupational Safety and Health Statistics (OSHS) Program will hold a special conference May 15–16, 2013 on work-related injuries, illnesses, and fatalities from the Survey of Occupational Injuries and Illnesses (SOII) and Census of Fatal Occupational Injuries (CFOI). We look forward to having many of our colleagues in the health and safety community within government, private industry, labor, and academia join us for this informative gathering.

Workshop Details

The workshop will include keynote speeches from key data users, researchers, and stakeholders. There will also be presentations of papers by safety and health professionals and a poster session focused on unique and interesting uses of OSHS data. Exceptional papers will be considered for inclusion in a special issue of the BLS [Monthly Labor Review](#) following the workshop. Additional details and information about how to register for the workshop along with directions to the BLS are available on the Internet at <https://www.bls.gov/iif/oshs40.htm>

Brief History of the OSHS Program

- 1970—Following passage of the [Occupational Safety and Health Act](#), BLS was tasked with developing a comprehensive statistical system covering work-related injuries, illnesses, and fatalities in private industry.
- 1972—First year the SOII was conducted by BLS. The survey provided estimates of the number of nonfatal injuries and illnesses by industry.
- 1992—SOII estimates were expanded to include detailed case characteristics and worker demographics for cases that involved days away from work. CFOI was initiated to provide a complete annual count of all fatal work injuries.
- 2013—BLS Occupational Safety and Health Data Users' Workshop.
