</table>

1 The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as: (N/EH) x 20,000,000, where N = number of injuries and illnesses.
2 Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
3 Incorrect national-level estimates of nonfatal occupational injuries and illnesses were published for the Survey of Occupational Injuries and Illnesses (SOII) for reference year 2012. This table includes corrected estimates. For additional information see: https://www.bls.gov/bls/errata/iif_errata_1014.htm.
4 Based on the Occupational Injury and Illness Classification System 2.01 developed by the Bureau of Labor Statistics.
5 Excludes farms with fewer than 11 employees.
6 Data too small to be displayed.

Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.
