

Within goods-producing industries, mining had the lowest rate of days away from work, job transfer, or restriction (DART) injuries and illnesses in 2006. The DART rates for the other goods-producing industries were not statistically different from each other.

For the ninth consecutive year in manufacturing, the rate at which job transfer or restriction cases occurred was higher than the rate for cases with days away from work. Manufacturing is the only industry sector in which this was the case.

In the goods-producing sector, construction had the highest rate of days away from work (DAFW) cases, 2.2 per 100 full-time employees, and the second-highest DAFW rate among all private industry sectors.
