Extended Mass Layoffs in 2002

U.S. Department of Labor Bureau of Labor Statistics August 2003

Report 971

Introduction

he Bureau of Labor Statistics (BLS) conducts the Mass Layoff Statistics (MLS) program to provide information on large-scale layoff events and on the characteristics of dislocated workers. Each month, BLS reports on the number of mass layoff actions by employers, and each quarter there is a separate report on the number and characteristics of those mass layoffs that last more than 30 days. This report extends that analysis for the entire 2002 calendar year, providing information on the industry, geographic distribution, and size of mass layoffs; the demographic characteristics of those claiming unemployment insurance; the duration of certified unemployment; the expectation of recall; and the extent of permanent worksite closures.

In 2002, employers laid off approximately 1.5 million workers in 7,293 extended mass layoff actions. Compared with 2001, layoff activity improved modestly as both the number of layoff events and the number of worker separations declined. However, layoff events and separations still registered their second highest annual totals since BLS studies of mass layoffs were reinstated in 1995. (See table 1.) While 30 States and the District of Columbia reported decreases in the number of separated workers from 2001, 14 States reached their highest annual levels of laid-off workers in 2002. Over the 2001-02 period, the annual average national unemployment rate increased from 4.7 percent to 5.8 percent, and nonfarm payroll employment decreased by 1.1 percent, or 1,450,000 jobs. Unemployment rates were higher in 47 States, lower in 2 States, and unchanged in 1 State and the District of Columbia over the 2001-02 period.

Extended mass layoffs, as defined for this report, refer to layoffs of at least 31 days' duration that involve the filing of initial claims for unemployment insurance by 50 or more individuals from a single establishment during a consecutive 5-week period. This report uses the North American Industry Classification System (NAICS) for the assignment and tabulation of layoff data by industry. Additional information about the MLS program is provided in the Technical Note that follows the tables.

Highlights

Industry distribution of 2002 mass layoffs

- Manufacturing establishments accounted for 34 percent of layoff events and 31 percent of separations in the private sector in 2002, down from 40 percent of layoff events and 37 percent of separations in 2001. For the second consecutive year, computer and electronic product firms (mostly semiconductors and telephone apparatus manufacturers) accounted for the largest number of workers laid off in manufacturing. This was followed by food manufacturing and transportation equipment (largely aircraft) manufacturing. These three sectors accounted for almost half of the separations in manufacturing in 2002. In contrast to developments in 2001, the largest decrease in laid-off workers in manufacturing, -50,021, or -38 percent, occurred among establishments manufacturing computer and electronic products. (See tables 2 and 3.)
- Agriculture accounted for 10 percent of all private sector layoff events and for 13 percent of all separations, mainly due to the end of seasonal work. (See table 2.) Layoff events and separations were most prevalent in agriculture and forestry support activities and in crop production.
- Retail trade (mainly general merchandise stores) accounted for 9 percent of separations and reached the highest level of laid-off workers the industry has recorded. (See table 2.) Bankruptcy, reorganization within the company, and the end of seasonal work were the reasons for layoff most cited by these employers.
- Administrative and waste services accounted for over 9 percent of all layoff events and separations, due in part to the completion of contracts in temporary help agencies and professional employer organizations. (See table 2.)
- Employers involved in the manufacture and distribution of computers (including semiconductors) accounted for 7 percent of layoff events and 6 percent of separations in the

private sector. The number of laid-off workers declined 41 percent, or by 60,740 workers. (See tables 2 and 3.) However, layoff activity in this industry grouping reached its second highest annual total in 2002.

- Manufacturers and distributors of clothing reported laying off 117,528 workers, posting the industry's highest recorded level of separations. (See table 2.) In the last 2 years, almost 225,000 workers have lost jobs due to mass layoffs in this industry group. Forty-seven percent of events and forty percent of separations in the group occurred in the South.
- Employers involved in food production, processing, and distribution accounted for 22 percent of all private sector separations, or 318,629 workers. The number of workers laid off increased by 7 percent, or 19,925 workers, compared with 2001, while the number of layoff events reached its lowest recorded annual total. (See tables 2 and 3.)
- Among the major sectors, real estate and rental and leasing companies had the largest percentage decrease in separations resulting from layoffs, followed by accommodation and food service. Layoffs in the management of companies and enterprises and in educational services accounted for the largest percentage increases of laid-off workers. Layoffs in government establishments increased 69 percent over the year, largely due to a rise in local government layoffs. (See table 3.)
- Among the 101 three-digit NAICS-coded industry groups identified in the MLS program, 55 posted decreases in the number of separated workers during 2002. Computer and electronic product manufacturing had the largest decrease (-50,021 workers), followed by air transportation (-37,363) and administrative and support services (-34,008). Forty-one industries registered increases, led by general merchandise stores (+33,113) and educational services (+25,325).
- Among three-digit NAICS industries, general merchandise stores and educational services moved into the top 10 in terms of worker separations. These industries replaced air transportation and machinery manufacturing. (See table 4.)
- Among six-digit NAICS industries, discount department stores, elementary and secondary schools, fruit and vegetable canning, and skiing facilities moved into the top 10 in terms of separations. Leading the list were department stores (except discount), scheduled air transportation, hotels and motels (except casino hotels), and bare printed circuit board manufacturing. (See table 5.)

Reason for layoff

• Employers citing the end of seasonal work as the reason for layoff accounted for 32 percent of layoff events and 36 percent of separations. (See table 6.) Seasonal layoffs

occurred primarily in food production (agriculture and food processing) establishments located in California. The number of workers laid off due to seasonal work reached an alltime high of 560,141 in 2002.

- Layoffs due to internal company restructuring accounted for 23 percent of all events and 25 percent of all separations. (See table 6.) These layoffs occurred largely in general merchandise stores, computer and electronic product manufacturing, telecommunications, and administrative and support services. Employers in California reported the largest number of such laid-off workers, followed by Illinois and Texas.
- Layoffs due to a nonseasonal lack of demand for products and services (slack work) declined sharply in 2002 (-113,257 workers), due largely to fewer layoffs in computer and electronic products, in accommodation, and in air transportation. Bankruptcy (-58,224) and financial difficulty (-48,478) were the next most common reasons among declines in layoffs. Layoffs due to the end of seasonal work and to the completion of contracts had the largest increases in worker separations (+61,500 and +17,032, respectively). (See tables 6 and 7.)
- Florida and Illinois accounted for the highest numbers of separations in layoffs due to the completion of contracts. Texas and California posted the highest separation counts in layoffs that resulted from financial difficulty. California accounted for the largest numbers of workers laid off due to seasonal work, slack work, and company reorganizations. (See table 8.)
- Following the September 11 terrorist attacks, employers reported 507 layoff events involving 145,844 workers in 34 States that were related either directly or indirectly to the incidents. Forty-nine percent of these layoffs and fifty-four percent of the separations occurred in just five States—California, Washington, Nevada, Illinois, and New York. Among those laid off because of the terrorist attacks, 33 percent, or 47,794 workers, had been employed in the scheduled air transportation industry. An additional 21 percent, or 30,073 workers, had been employed in hotels and motels. Sixty-five percent of the employers citing the events of September 11 as a secondary cause of layoff indicated a nonseasonal lack of demand for product or services (slack work) as the primary reason for the layoff, accounting for 60 percent of separations. (See tables 9 and 10.)

Size of layoff

• Layoff events in 2002 continued to be concentrated at the lower end of the layoff-size spectrum, with 58 percent involving fewer than 150 workers. This figure has remained fairly consistent, ranging from 58 to 60 percent annually. These layoffs, however, accounted for only 24 percent of all separations, about the same as in each of the last 2 years.

Separations involving 500 or more workers accounted for 35 percent of all separations, about the same percentage as posted in each of the last 3 years. (See table 11.)

- Layoffs averaged 212 separations per layoff event in 2002, the highest on record. Among private sector establishments, employers in arts, entertainment, and recreation (mostly in motion picture and sound recording industries and in amusements, gambling, and recreation) reported the largest average layoff size, 372, followed by retail trade, with 329 workers (largely in general merchandise and food and beverage stores). Establishments with the smallest average layoff size were those in educational services (114 workers) and in health care and social assistance (136 workers). (See table 12.)
- Employers citing bankruptcy as the reason for layoff had the highest average layoff size per layoff event (359 workers), followed by those reporting energy-related layoffs (353 workers). Layoffs due to inclement weather and the discontinuation of a product line averaged the fewest separations per layoff event (120 and 124 workers, respectively). (See table 12.)
- Employers reporting the worksite as permanently closed averaged 257 separations per layoff event, down from 303 in 2001. (See table 12.)

Initial claimants

- There were 1,368,740 initial claimants for unemployment insurance associated with extended mass layoff events in 2002. Of these, 43 percent were women, 15 percent were black, 19 percent were Hispanic, and 15 percent were 55 years of age or older. About 2 out of 5 claimants were between the ages of 30 and 44. (See tables 13 and 15.) Of the total civilian labor force in 2002, 47 percent were women, 11 percent were black, 12 percent were Hispanic, and 14 percent were 55 years of age or older. Thirty-seven percent of the civilian labor force was between the ages of 30 and 44.
- Persons of Hispanic origin accounted for 19 percent of the claimants involved in extended mass layoff events, the same as last year. The percentage of Hispanic claimants was highest in agriculture (89 percent), followed by wholesale trade (27 percent) and health care and social assistance (26 percent). Layoffs due to environmental concerns, seasonal work, and vacation period had higher percentages of Hispanic claimants. (See table 14.)
- Black claimants accounted for 15 percent of all laid-off workers, about the same as last year (14 percent). Establishments providing educational services reported the highest percentage of black claimants, followed by administrative and waste services and by health care and social assistance.

The proportion of black claimants was highest in layoffs due to the cancellation of contracts, import competition, and material shortage. (See table 14.)

• The proportion of claimants aged 55 and older increased slightly, from 13 percent in 2001 to 15 percent in 2002. The representation of these older claimants was highest in arts, entertainment, and recreation and in transportation and warehousing. Claimants between the ages of 30 and 44 accounted for the largest portion of claimants in all layoffs. The proportion of these claimants was highest among information establishments and in layoffs due to non-natural disaster. (See table 15.)

Duration of insured unemployment

- New Mexico had the longest duration of insured unemployment associated with extended mass layoff events (as measured by the period of continued claims for unemployment insurance following the initial claim), followed by the District of Columbia, Tennessee, West Virginia, and Colorado. Claimants experiencing the shortest jobless duration were separated from employers located in Kentucky, Nebraska, Hawaii, and Alaska. (See table 16.)
- The longest average jobless duration was experienced by claimants laid off from utilities and from finance and insurance (primarily in funds, trusts, and other financial vehicles and in securities, commodity contracts, and investments). Claimants laid off from accommodation and food services (mostly in hotels and motels) had the shortest spells of jobless duration, followed by construction and by arts, entertainment, and recreation. (See table 17.)
- Claimants laid off due to environmental concerns and the relocation of establishments both within and outside of the United States had the longest jobless duration. The shortest duration occurred in layoffs due to natural disasters, plant or machine repair, and labor disputes. (See table 17.)
- Among the 50 largest Metropolitan Statistical Areas in terms of the level of initial claims in extended mass layoff events, claimants laid off from establishments in Seattle-Bellevue-Everett, WA, had the longest jobless duration, followed by those in Newark, NJ, Chicago, IL, and Fort Worth-Arlington, TX. Claimants in Harrisburg-Lebanon-Carlisle, PA, and Erie, PA, had the shortest durations of unemployment. Benefit exhaustion rates were highest in Yuma, AZ, West Palm Beach-Boca Raton, FL, Atlanta, GA, and Seattle-Bellevue-Everett, WA. (See table 18.)
- New Mexico reported the largest proportion of claimants exhausting unemployment insurance benefits, followed by Tennessee. States registering the lowest percentages of exhaustees were Mississippi, Nebraska, West Virginia, and Alaska. (See table 16.)

- Benefit exhaustion rates were highest among workers in utilities, in finance and insurance, and in professional and technical services, while workers laid off in accommodation and food services and in construction had the lowest rates. (See table 17.)
- Benefit exhaustion rates were highest for claimants involved in worksite closures. Claimants in layoffs from which employers did not expect a recall had higher benefit exhaustion rates compared with events in which a recall was expected. (See table 17.)
- Claimants of black and of Asian or Pacific Islander ethnicity had higher benefit exhaustion rates than did other race and ethnic groups, while white claimants had the lowest. By age, the older a claimant, the more likely he or she was to exhaust benefits. Women had higher exhaustion rates than men did. (See table 19.)

Geographic distribution

- In 2002, for the sixth time in the last 7 years, employers in the West reported the highest number of separations, primarily among establishments engaged in food production (agriculture and food manufacturing). (See table 20.) While the Northeast continued to have the lowest numbers of events and separations, layoff activity in that region reached record levels. The Northeast and West regions experienced the largest jobless rate increases between 2001 and 2002. Excluding the impact of seasonal layoffs, the West (285,581) and South (284,225) had the highest levels of separated workers in extended mass layoff events.
- In 2002, decreases in the number of separations occurred in 3 of the 4 regions, with the Midwest (-141,433) reporting the largest decrease, mostly due to declining numbers of layoffs in administrative and support services and in transportation equipment manufacturing. Seven of the nine geographic divisions reported a decrease from 2001, led by the East North Central (-139,199), West South Central (-34,328), and Pacific (-28,520) divisions. (See table 20.)
- Michigan and Ohio reached their lowest annual totals of laid-off workers since the MLS program resumed in 1995, while 14 States reached new highs. California had the largest number of worker separations, 357,095, mostly from food production, administrative and support services, and computer and electronic product manufacturing. The States with the next-highest totals of separations were Illinois (154,708), Florida (100,371), and New York (81,162). (See table 21.) Even when the substantial impact of seasonal layoffs is excluded, California still had the highest separations total for 2002.
- Thirty states and the District of Columbia had overthe-year declines in the number of laid-off workers, led by Michigan (-76,361), Texas (-32,887), California (-30,866), and

Wisconsin (-21,295). Of the 20 States reporting an over-theyear increase, Arizona (+22,195), New Jersey (+9,617), and Washington (+9,359) experienced the sharpest increases. (See table 21.)

- Some 66 percent of events and 61 percent of separations occurred in metropolitan areas, a decrease from 2001, when 68 percent of events and 64 percent of separations occurred in such areas. Among the 331 Metropolitan Statistical Areas, Chicago reported the highest number of separations (80,110), mainly from administrative and support services, specialty trade contractors, and professional and technical services. Salinas, Phoenix-Mesa, Riverside-San Bernardino, and Yuma entered the top 10 metropolitan areas in terms of laid-off workers, replacing Detroit, Houston, Las Vegas, and Dallas. (See table 22.) Employers located in nonmetropolitan areas separated 187,385 workers in mass layoffs, down 24 percent, or 60,558 workers, from 2001.
- California had the highest concentration of layoffs relative to employment among the States, in part due to the impact of layoffs in food production. (See chart 1.) Relative concentrations of mass layoff activity also were high in Washington, Illinois, and Maine. The lowest concentrations of mass layoff activity were found in Delaware, South Dakota, and the District of Columbia.

Recall expectations

- In 2002, employers expected a recall in only 46 percent of mass layoff actions, not very different from 2001. Historically, a recall has been expected in about 60 percent of all layoff events. Layoffs in agriculture (90 percent), in arts, entertainment, and recreation (82 percent), and in construction (76 percent) were more likely to have some type of recall than were those in other industries. Layoffs in the finance and insurance sector had the lowest percentage of recall expectation (2 percent), followed by those in the information sector (11 percent) and retail trade (19 percent). Excluding seasonal and vacation-period layoffs (in which a recall was expected 92 percent of the time), a recall was expected in only 23 percent of events, the MLS program's lowest annual recorded percentage. (See tables 23 and 24.)
- Of those establishments expecting a recall, 37 percent indicated that all workers would eventually be recalled and 87 percent expected to recall at least half of the workers. (See table 23.)
- Employers citing bankruptcy or a business ownership change as the reason for layoff had the lowest percentage of recall expectation, followed by those citing the relocation of worksites outside of the United States, reorganization within the company, and the relocation of an establishment within the United States. (See table 24.)

- Manufacturing industries accounted for 43 percent of all events and 39 percent of the separations for which the employer did not expect a recall. These occurred mainly in computer and electronic products (primarily in semiconductors and related devices), transportation equipment (mostly in aircraft), and apparel. (See table 25.)
- Internal company restructuring was the reason cited most frequently for layoffs from which no recall is expected, accounting for 49 percent of the layoff events and 54 percent of separations. Layoffs due to slack work accounted for an additional 20 percent of layoff events and 16 percent of separations. (See table 25.)

Permanent worksite closures

- Employers reported that 16 percent of all extended mass layoff events resulted in a permanent closure of the worksite, affecting 302,979 workers. While the number of workers involved in closures decreased by 20 percent from 2001, this year's total was the program's second highest. (See table 26.)
- Separations in permanent closures were due mainly to internal company restructuring, slack work, the cancellation of contracts, and the relocation of worksites within the United States. Compared with developments in 2001, the number of workers separated due to internal company restructuring declined most sharply (-71,036), followed by the number separated due to import competition (-7,250). (See table 26.)
- In 2002, manufacturing accounted for 49 percent of events and 39 percent of separations resulting in worksite closures in the private sector. These events occurred mostly in computer and electronic products manufacturing, in transportation equipment, in apparel, and in food manufacturing. Retail trade accounted for 15 percent of the layoff events and 25 percent of separations during the year, largely in general merchandise stores and in food and beverage stores. (See table 27.)
- In 2002, establishments engaged in truck transportation, food and beverage retailing, transportation equipment manufacturing, and telecommunications moved into the top 10 three-digit NAICS industries in terms of laid-off workers in permanent closures. They replaced firms in the electronic equipment and appliance manufacturing, primary metal manufacturing, textile mills, and building material and garden supply stores industries. (See table 28.)
- California registered the highest number of separations in permanent closure-related events (45,923), followed by Texas (32,592), Illinois (19,075), Florida (17,001), and Ohio (15,917). Michigan (-41,031), California (-17,296), and Illinois (-9,674) reported the largest decreases in separations from 2001 to 2002; Massachusetts (+5,512), Tennessee (+4,918),

New Jersey (+4,201), and Texas (+4,157) had the largest increases in laid-off workers. (See table 29.)

• Among the 331 Metropolitan Statistical Areas, Chicago reported the highest number of separations (11,367) in permanent closure-related events, followed by Los Angeles-Long Beach (10,933) and Salt Lake City-Ogden (6,278). Kansas City, Detroit, Boston, Dallas, and Bergen-Passaic entered the top 10 metropolitan areas this year in terms of laid-off workers, replacing New York, Houston, San Antonio, Seattle-Bellevue-Everett, and Tampa-St. Petersburg-Clearwater. (See table 30.)

Dislocated worker information

- In addition to extended mass layoff information, the MLS program has, since 1997, collected information identifying major segments of the dislocated worker population as determined by the U.S. Department of Labor's Employment and Training Administration. MLS typically tracks three components of this unique group of laid-off workers—dislocated worker closures, substantial layoffs, and initial claimants laid off from establishments in declining industries. However, because of the switch to the North American Industrial Classification System (NAICS) as the basis for reporting industry in the MLS program, declining industry data are not available for 2002. (See table 31.)
- A dislocated worker closure is a layoff action that results in a permanent worksite closure and involves at least 20 or more workers. This concept includes the permanent worksite closures reported earlier in this report, with the addition of worksite closures involving between 20 and 49 workers. In 2002, there were 320,186 workers laid off in 1,389 layoff actions. California had the highest level of dislocated worker separations, 49,229, followed by Texas (32,814), and Illinois (19,543). Manufacturing (mostly computer and electronic products, food, apparel, and transportation equipment manufacturers), retail trade (largely general merchandise stores and food and beverage stores), transportation and warehousing, and administrative and waste services had the highest levels of laid-off workers. (See tables 32 and 33.)
- Layoffs termed "substantial layoffs" include extended mass layoffs that either involve 500 or more workers or in which the number of separations is at least one-third of the employment prior to layoff. In 2002, there were 855 layoffs events, involving 262,020 workers, meeting the substantial layoff criteria. California reported the largest number of worker separations (64,524), followed by Illinois (35,565), Pennsylvania (18,453), and Washington (17,491). Manufacturing (mostly firms in transportation equipment and in computer and electronic products) had the highest level of laidoff workers in substantial layoff events, followed by administrative and waste services (temporary help) and construction. (See tables 32 and 33.)

Data on layoffs were reported by employers in all States and the District of Columbia.
 The MLS program began collecting data in the second quarter of 1995. (See Technical Note.)

² Data do not meet BLS or State agency disclosure standards.

³ Layoffs directly related to September 11 encompass those that occurred in the affected local economies. Layoffs indirectly related

to September 11 involve those outside of the directly impacted areas. For indirectly related layoffs, the primary reason for layoff is something other than non-natural disaster.

¹ The MLS program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because such

individuals are classified as employed in the CPS. Final payment information for MLS claimants is collected weekly. See the Technical Note for additional information.

² See footnote 1, table 1.

³ Data do not meet BLS or State agency disclosure standards.

¹ The MLS program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because such individuals are classified as employed in the CPS. Final

payment information for MLS claimants is collected weekly. See the Technical Note for additional information.

² See footnote 1, table 1.

³ The top 50 Metropolitan Statistical Areas in terms of the level of extended mass layoff initial claims activity are shown.

Table 19. Unemployment insur	ance benefit exhaustion	rates by selected claimant	characteristics, 2002

Technical Note

The Mass Layoff Statistics (MLS) program is a Federal-State program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each State's unemployment insurance (UI) database. Establishments that have at least 50 initial claims for unemployment insurance filed against them during a consecutive 5-week period are contacted by the State agency in charge of the UI program to determine whether these separations are of at least 31 days' duration, and, if so, information is obtained on the total number of persons separated and the reasons for these separations. Establishments are identified according to industry classification and location, and unemployment insurance claimants are identified by such demographic factors as age, race, sex, ethnic group, and place of residence. The MLS program yields information on an individual's entire spell of unemployment, to the point at which regular unemployment insurance benefits are exhausted.

The MLS program resumed in April 1995; it had been terminated in November 1992 due to lack of funding. However, because of changes in concepts and definitions, data from the resumed program are not comparable with earlier data.

Definitions

Clothing manufacturing and distribution. Industries involved in the production and distribution of clothing. These industries include cotton farming; cotton ginning; textile mills; apparel manufacturing; footwear manufacturing; apparel and piece goods merchant wholesalers; clothing stores; shoestores; department stores; and formal wear and costume rental.

Computer manufacturing and distribution, including semiconductors. Industries involved in the production and distribution of computers, including semiconductor manufacturing. These industries include semiconductor machinery manufacturing; computer and peripheral equipment manufacturing; communications equipment manufacturing; audio and video equipment manufacturing; semiconductor and electronic component manufacturing; software reproducing; computer and software merchant wholesalers; computer and software stores; software publishers; computer systems design and related services; computer training; and computer and office machine repair.

Continued claim. A claim filed after the initial claim, by mail, telephone, or in person, for waiting period credit or payment

for a certified week of unemployment. The MLS program collects continued claims for 1 week each month. That is generally the calendar week that includes the 12th day of the month and is referred to as the Current Population Survey (CPS) reference week. Because continued claims are not tracked for all weeks, an exact measure of the duration of insured joblessness is not available.

Dislocated worker closure. Layoff actions that result in a permanent worksite closure and involve 20 or more workers.

Dislocated worker substantial layoff. Layoff actions that either involve 500 or more workers or in which the number of separations is at least one-third of the employment prior to layoff. Layoffs due to the end of seasonal work, vacation period, or labor dispute are excluded.

Establishment. A unit at a single physical location at which predominantly one type of economic activity is conducted.

Extended layoff event. Fifty or more initial claims for unemployment insurance benefits from an establishment during a 5-week period, with at least 50 workers separated for more than 30 days.

Final payment recipients. Persons who have exhausted all of their unemployment insurance benefits and are no longer eligible for any further benefits.

Food production, processing, and distribution. Industries that are involved in the production and distribution of food. These industries include oilseed and grain farming; vegetable and melon farming; fruit and tree nut farming; food crops grown under cover; sugarcane farming; hay farming; all other crop farming; cattle ranching and farming; hog and pig farming; poultry and egg production; sheep and goat farming; animal aquaculture; apiculture; all other animal production; fishing, hunting, and trapping; soil preparation, planting, and cultivating; crop harvesting, primarily by machine; other postharvest crop activities; farm labor contractors and crew leaders; farm management services; support activities for animal production; food manufacturing; beverage manufacturing; grocery and related product wholesalers; farm product raw material merchant wholesalers; alcoholic beverage merchant wholesalers; farm supplies merchant wholesalers; food and beverage stores; food (health) supplement stores; refrigerated warehousing and storage; farm product warehousing and storage; veterinary services; and food services and drinking places.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Layoff. The separation of persons from an employer as part of a mass layoff event. (See below.) Such layoffs involve both persons who are subject to recall and those who are terminated.

Mass layoff. Fifty or more initial claims for unemployment

insurance benefits from an establishment beginning in a given month, regardless of duration.

Worksite closure. The full closure of either multiunit or singleunit establishments or the partial closure of a multiunit establishment in which entire worksites affected by layoffs are closed or planned to be closed.
