¹ A composite rate is a set contribution covering more than one benefit area, for example, healthcare and life insurance. Cost data for individual plans cannot be determined.

² Based on worker attributes. For example, employee contributions may vary based on earnings, length of service, or age.

³ Amount varies by options selected under a "cafeteria plan" or employer-sponsored reimbursement account.

⁴ Surveyed occupations are classified into wage categories based on the average wage for the occupation, which may include workers with earnings both above and

below the threshold. The categories were formed using percentile estimates generated using data from the National Compensation Survey publication, "Employer Costs for Employee Compensation - March 2013."

NOTE: Dash indicates no workers in this category or data did not meet publication criteria. For definitions of major plans, key provisions, and related terms, see the "Glossary of Employee Benefit Terms" at www.bls.gov/ncs/ebs/glossary20122013.htm.
