AMERICAN TIME USE SURVEY — 2025 RESULTS

In 2025, 35 percent of employed people did some or all of their work at home on days they worked, and 70 percent of employed people did some or all of their work at their workplace, the U.S. Bureau of Labor Statistics reported today.

These and other results from the American Time Use Survey (ATUS) were released today. They include the average amount of time per day in 2025 that individuals worked, did household activities, and engaged in leisure and sports activities. Additionally, measures of the average time per day spent providing childcare—both as a primary (or main) activity and while doing other things are provided. For a detailed description of ATUS data and methodology, see the Technical Note.

Working (by Employed People) in 2025

- On days they worked, full-time employed people worked an average of 8.1 hours. They worked 8.5 hours on an average weekday and 5.5 hours on an average weekend day. (See table 4.)
- Many more people worked on weekdays than on weekend days: 81 percent of employed people worked on an average weekday, compared with 30 percent on an average weekend day. (See table 4.)
- Among those who worked on an average weekend day, those with lower levels of education worked more hours than those with a bachelor's degree or higher. On weekend days they worked, high school graduates with no college spent 6.4 hours working, compared with 4.0 hours for those with a bachelor's degree or higher. (See table 4.)
- On days they worked, 35 percent of employed people did some or all of their work at home and 70 percent of employed people did some or all of their work at their workplace. Employed women (38 percent) were more likely to work at home than employed men (31 percent). (See table 6.)
- Among workers age 25 and over, those with higher levels of education were more likely to work at home than were those who had less education. Fifty-one percent of employed people with a bachelor's degree or higher performed some work at home on days worked, compared with 19 percent of those with a high school diploma and no college. Workers with a bachelor's degree or higher were also more likely to work on an average day than were those with a high school diploma and no college—72 percent, compared with 63 percent. (See table 6.)

Household Activities in 2025

- On an average day, 81 percent of people engaged in household activities—such as housework, cooking, lawn care, or household management—spending about 2 hours on these activities. (See table 1.)
- Eighty-seven percent of women and 75 percent of men spent some time doing household activities on an average day. On the days they did household activities, women spent an average of 2.8 hours on these activities, while men spent 2.1 hours doing so. (See table 1.)
- Time spent doing household activities increased with age. On an average day, individuals ages 15 to 19 spent 43 minutes engaged in household activities, while those age 65 and over spent 2.7 hours doing so. (See table 3.)
- Among adults living with children under age 18, those who were not employed spent over an hour more than those who were employed doing household activities on an average day—3.1 hours compared to 1.7 hours. (See tables 8B and 8C.)
- More people engaged in housework on weekend days than on weekdays, on average—40 percent, compared with 35 percent. However, people were slightly more likely to do food preparation and cleanup on weekdays than weekend days—66 percent, compared to 63 percent. (See table 2.)

Leisure and Sports Activities in 2025

- Nearly everyone age 15 and over (95 percent) engaged in some sort of leisure and sport activity, such as watching TV, socializing, or exercising on an average day. Men were slightly more likely to engage in leisure and sports activities than women (96 percent compared with 94 percent) and also spent more time in these activities than did women (5.6 hours, compared with 4.8 hours). (See table 1.)
- On average, adults age 75 and over spent 7.4 hours engaged in leisure and sports activities per day—more than any other age group. Those ages 35 to 44 averaged 3.9 hours doing leisure and sports activities per day—less than all other age groups. (See table 11A.)
- Watching TV was the leisure and sports activity that occupied the most time (2.6 hours per day), accounting for half of all leisure time, on average (5.2 hours). (See table 1 and table 11A.)
- People were less likely to engage in socializing and communicating on an average day in 2025 than in 2015—30 percent compared with 38 percent. They also spent less time in these activities in 2025 than in 2015—35 minutes compared with 41 minutes. (See tables 1 and 11A.)
- Individuals spent more time playing games or using a computer on an average day in 2025 than they did in 2015 (37 minutes compared with 25 minutes). This includes time spent playing board games, video games, using social media, and other computer activities done for leisure. Individuals ages 15 to 19 spent 1.5 hours playing games or using a computer for leisure on an average day in 2025, more than any other age group. (See table 11A.)

- Employed adults living in households with no children under age 18 engaged in leisure and sports activities for 4.5 hours per day, over an hour more than did employed adults living with a child under age 6 (3.2 hours). (See table 8B.)

Care of Household Children in 2025

- Adults living in households with children under age 6 spent an average of 2.3 hours per day providing primary childcare to household children. Adults living in households where the youngest child was between the ages of 6 and 17 spent one-third as much time providing primary childcare to household children—47 minutes per day. Primary childcare is childcare that is done as a main activity, such as providing physical care or reading to children. (See table 9.)
- On an average day, among adults living in households with children under age 6, women spent an hour more than men providing primary childcare to household children—2.8 hours compared to 1.7 hours. This includes providing physical care, such as bathing or feeding a child (1.3 hours compared to 38 minutes) and travel related to care of household children (16 minutes compared to 10 minutes), among other activities. (See table 9.)
- On average, among adults living with children under age 6, those who were not employed spent over an hour more per day caring for and helping household children than did employed adults—3.3 hours versus 1.7 hours. (See tables 8B and 8C.)
- Adults living in households with at least one child under age 13 spent an average of 5.1 hours per day providing secondary childcare—that is, they had at least one child in their care while doing activities other than primary childcare. Secondary childcare provided by adults living in households with children under age 13 was most commonly provided while doing leisure activities (1.9 hours) or household activities (1.2 hours). (See table 10.)
- Adults living in households with children under age 6 spent more time providing primary childcare on an average weekday than weekend day (2.4 hours and 2.0 hours). However, they spent less time providing secondary childcare on weekdays (4.2 hours) than on weekend days (7.7 hours). (See tables 9 and 10.)

Additional Data

ATUS 2025 data files are available for users to do their own tabulations and analyses. In accordance with BLS and Census Bureau policies that protect the privacy of survey respondents, personally identifying information does not appear on the data files. The 2025 data files are available on the BLS website at www.bls.gov/tus/data.htm.

Federal Government Shutdown

Some agencies of the federal government—including the Bureau of Labor Statistics—were shut down or operating at reduced staffing levels from October 1, 2025, through November 12, 2025.

All American Time Use Survey (ATUS) operations were suspended from October 1 through November 12. No call attempts were made and no interviews were completed during the shutdown. Because ATUS interviews are conducted every day and collect time diaries about “yesterday”—that is, the day prior to the interview day—there are no ATUS data for September 30 through November 11. Data collection resumed on November 13.

The shutdown primarily affected ATUS data for the fourth quarter of 2025, as nearly all of the missing time diaries were in this period. ATUS estimates included in this news release have been weighted such that the time diaries for November 12 through December 30 represent all days in the quarter, including those missing because of the shutdown. For information on the ATUS weights, please see the Technical Note.

It is possible that ATUS estimates for 2025 or for the fourth quarter of 2025 could have been affected by the loss of data due to the shutdown. If people’s time use in October and early November 2025 differed from their time use in the remainder of the year, ATUS estimates would fail to account for this difference. For example, people who were affected by the shutdown may have modified how they spent their time, but the estimates would not capture this. Any seasonal differences in activities between these periods could also affect the estimates, although ATUS data historically have exhibited minimal seasonality. It is not possible to quantify the effect of the shutdown on the ATUS estimates.

Additional information is available at www.bls.gov/tus/notices/2026/october2025shutdown.htm .

Technical Note

The estimates in this news release are based on annual average data from the American Time Use Survey (ATUS). The ATUS, which is conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS), is a continuous survey about how individuals age 15 and over spend their time.

If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Survey methodology

Data collection for the ATUS began in January 2003. Sample cases for the survey are selected monthly, and interviews are conducted continuously throughout the year. In 2025, approximately 6,100 individuals were interviewed. Estimates are released annually.

ATUS sample households are chosen from the households that completed their eighth (final) interview for the Current Population Survey (CPS), the nation's monthly household labor force survey. ATUS sample households are selected to ensure that estimates will be nationally representative.

One individual age 15 or over is randomly chosen from each sampled household. This "designated person" is interviewed by telephone once about his or her activities on the day before the interview—the "diary day."

All ATUS interviews are conducted using Computer Assisted Telephone Interviewing. Procedures are in place to collect information from the small number of households that did not provide a telephone number during the CPS interview.

ATUS designated people are preassigned a day of the week about which to report. Preassignment is designed to reduce variability in response rates across the week and to allow oversampling of weekend days so that accurate weekend day measures can be developed. Interviews occur on the day following the assigned day. For example, a person assigned to report about a Monday would be contacted on the following Tuesday. Ten percent of designated people are assigned to report about each of the five weekdays. Twenty-five percent are assigned to report about each weekend day. Households are called for up to 8 consecutive weeks (for example, 8 Tuesdays) in order to secure an interview.

About the questionnaire

In the time diary portion of the ATUS interview, survey respondents sequentially report activities they did between 4 a.m. on the day before the interview until 4 a.m. on the day of the interview. For each activity, respondents are asked how long the activity lasted. For activities other than personal care activities (such as sleeping and grooming), interviewers also ask respondents where they were and who was in the room with them (if at home) or who accompanied them (if away from home). If respondents report doing more than one activity at a time, they are asked to identify which one was the "main" (primary) activity. If none can be identified, then the interviewer records the first activity

mentioned. After completing the time diary, interviewers ask respondents additional questions to clearly identify work, volunteering, eldercare, and secondary childcare activities. Secondary childcare is defined as having a child under age 13 in one's care while doing other activities.

In addition, the ATUS includes an update of the household composition from the last CPS interview (2 to 5 months prior to the ATUS interview), the labor force status of the respondent, and the employment status of his or her spouse or unmarried partner. For respondents who became employed or changed jobs between the last CPS interview and the ATUS interview, information also is collected on industry, occupation, class of worker, and earnings. Finally, a question about current school enrollment status is asked of all respondents ages 15 to 49.

After completing the interview, primary activity descriptions are assigned a single 6-digit code using the ATUS Coding Lexicon. The 3-tier coding system consists of 17 major activity categories, each with multiple second- and third-tier subcategories. These coding lexicon categories are then combined into composite categories for publication, such as in this news release. Descriptions of categories shown in this release can be found in the Major activity category definitions section of this Technical Note. The ATUS Coding Lexicon can be accessed at www.bls.gov/tus/lexicons.htm.

Because of the complexity of coding everyday activities into narrowly defined lexicon categories, coders use a comprehensive set of rules to guide their decisions. In order to capture useful and detailed information, travel activities are coded according to the purpose of travel. For more information about coding travel, see Exhibit 5.1 of the ATUS User's Guide at www.bls.gov/tus/atususersguide.pdf.

Concepts and definitions

Average day. The average day measure reflects an average distribution across all people in the reference population and all days of the week. The ATUS collects data about daily activities from all segments of the population age 15 and over, including people who are employed and not employed. Activity profiles differ based upon age, employment status, sex, and other characteristics. For example, in 2025, people in the United States age 15 and over spent 3.0 hours per day working. By comparison, on an average weekday they worked, full-time employed people spent 8.5 hours working. Many activities typically are not done on a daily basis, and some activities only are done by a subset of the population.

Average hours per day. The average number of hours spent in a 24-hour day (between 4 a.m. on the diary day and 4 a.m. on the interview day) doing a specified activity.

- *Average hours per day, population.* The average number of hours per day is computed using all responses from a given sample of the population, including those of respondents who did not do a

particular activity on their diary day. These estimates reflect how many people engaged in an activity and the amount of time they spent doing it.

- *Average hours per day, people who did the activity.* The average number of hours per day is computed using only responses from those who engaged in a particular activity on their diary day.

Diary day. The diary day is the day about which the respondent reports. For example, the diary day of a respondent interviewed on Tuesday is the preceding Monday.

Earnings

- *Usual weekly earnings.* Estimates represent the earnings of full-time wage and salary workers with one job only (both incorporated and unincorporated self-employed are excluded), before taxes and other deductions. They include any overtime pay, commissions, or tips usually received. Usual weekly earnings are updated in the ATUS for about 40 percent of wage and salary workers—if the respondent changed jobs or employment status between the CPS and ATUS interviews, or if the CPS weekly earnings value was imputed. This means that the earnings information could be out of date because the CPS interview was done 2 to 5 months prior to the ATUS interview. Respondents are asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, annually, or other) and how much they usually earn in the reported time period. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months.
- *Weekly earnings quartiles.* The ranges used for the quartiles represent approximately 25 percent of full-time wage and salary workers (both incorporated and unincorporated self-employed are excluded) who held only one job. For example, 25 percent of full-time wage and salary workers with one job only had weekly earnings of \$840 or less in 2025. These dollar values vary from year to year.

Employment status

- *Employed.* All people who:
 - 1) At any time during the 7 days prior to the interview did any work at all as paid employees, or worked in their own business or profession or on their own farm; or

- 2) Were not working during the 7 days prior to the interview but had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, childcare problems, labor-management disputes, maternity or paternity leave, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs; or

- 3) Usually worked 15 hours or more as unpaid workers in a family-operated enterprise.

- *Employed full time.* Full-time workers are those who usually worked 35 or more hours per week at all jobs combined.
- *Employed part time.* Part-time workers are those who usually worked fewer than 35 hours per week at all jobs combined.
- *Not employed.* People are not employed if they do not meet the conditions for employment. Those who are not employed include individuals classified as unemployed as well as those classified as not in the labor force (using CPS definitions).

The numbers of employed and not employed people in this release do not correspond to published totals from the CPS for several reasons. First, the reference population for the ATUS is age 15 and over, whereas it is age 16 and over for the CPS. Second, ATUS data are collected continuously, the employment reference period being the 7 days prior to the interview. By contrast, CPS data are usually collected during the week including the 19th of the month and generally refer to employment during the week containing the 12th of the month. Finally, the CPS accepts answers from household members about other household members whereas such proxy responses are not allowed in the ATUS. While the information on employment from the ATUS is useful for assessing work in the context of other daily activities, the employment data are not intended for analysis of current employment trends. Compared with the CPS and other estimates of employment, the ATUS estimates are based on a much smaller sample and are only available with a substantial lag since ATUS data and estimates are published during the year following data collection.

Household children. Household children are children under age 18 residing in the household of the ATUS respondent. The children may be related to the respondent (such as his or her own children, grandchildren, nieces or nephews, or brothers or sisters) or not related (such as foster children or children of roommates or boarders).

Primary activity. A primary activity is the main activity a respondent was doing at a specified time. With the exception of secondary childcare in table 10, the estimates presented in this release reflect time spent in primary activities only.

Secondary activities. A secondary (or simultaneous) activity is an activity done at the same time as a primary activity. With the exception of the care of children under age 13, information on secondary activities is not collected in the ATUS.

Secondary childcare. Secondary childcare is care for children under age 13 that is done while doing an activity other than primary childcare, such as cooking dinner. Secondary childcare estimates are derived by summing the durations of activities during which respondents had at least one child under age 13 in their care while doing other things. The time individuals spend providing secondary childcare is further restricted to the time between when the first household child under age 13 woke up and when the last household child under age 13 went to bed. It is also restricted to times the respondent was awake. If respondents report providing both primary and secondary care at the same time, the time is attributed to primary care only.

Weekday, weekend, and holiday estimates. Estimates for weekdays are an average of reports about Monday through Friday, excluding holidays. Estimates for weekend days and holidays are an average of reports about Saturdays, Sundays, and the following holidays: New Year's Day, Easter, Memorial Day, the Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

Major activity category definitions

The following definitions describe the activity categories shown in this report. All major time-use categories in this release include related travel time and waiting time. For example, time spent "driving to the stadium" and time spent "waiting to get into the stadium to play ball" are included in Leisure and sports.

Personal care activities. Personal care activities include sleeping, grooming (such as bathing or dressing), health-related self-care, and personal or private activities. Receiving unpaid personal care from others (for example, "my sister put polish on my nails") also is captured in this category. In general, respondents are not asked who they were with or where they were for personal care activities, as such information can be sensitive.

Eating and drinking. All time spent eating or drinking (except eating and drinking done as part of a work or volunteer activity), whether alone, with others, at home, at a place of purchase, or somewhere else, is classified here.

Household activities. Household activities are activities done by individuals to maintain their households. These include housework; cooking; lawn and garden care; pet care; vehicle maintenance and repair; home maintenance, repair, decoration, and renovation; and household management and organizational activities (such as filling out paperwork or planning a party). Food preparation, whether or not reported as done specifically for another household member, is always classified as a household activity unless it was done

as a volunteer, work, or income-generating activity. For example, "making breakfast for my son" is coded as a household activity, not as childcare.

Purchasing goods and services. This category includes time spent purchasing consumer goods, professional and personal care services, household services, and government services. Consumer purchases include most purchases and rentals of consumer goods, regardless of the mode or place of purchase or rental (in person, online, via telephone, at home, or in a store). Gasoline, grocery, other food purchases, and all other shopping are further broken out in subcategories.

Time spent obtaining, receiving, and purchasing professional and personal care services provided by someone else also is classified in this category. Professional services include childcare, financial services and banking, legal services, medical and adult care services, real estate services, and veterinary services. Personal care services include day spas, hair salons and barbershops, nail salons, and tanning salons. Activities classified here include time spent paying, meeting with, or talking to service providers, as well as time spent receiving the service or waiting to receive the service.

Time spent arranging for and purchasing household services provided by someone else also is classified here. Household services include housecleaning; cooking; lawn care and landscaping; pet care; tailoring, laundering, and dry cleaning; vehicle maintenance and repairs; and home repairs, maintenance, and construction.

This category also captures the time spent obtaining government services—such as applying for food assistance and purchasing government-required licenses or paying fines or fees.

Caring for and helping household members. Time spent doing activities to care for or help any child (under age 18) or adult in the household, regardless of relationship to the respondent or the physical or mental health status of the person being helped, is classified here. Caring for and helping activities for household children and adults are coded separately in subcategories.

Primary childcare activities include time spent providing physical care; playing with children; reading with children; assisting with homework; attending children's events; taking care of children's health needs; and dropping off, picking up, and waiting for children. Passive childcare done as a primary activity (such as "keeping an eye on my son while he swam in the pool") also is included. A child's presence during the activity is not enough in itself to classify the activity as childcare. For example, "watching television with my child" is coded as a leisure activity, not as childcare.

Secondary childcare occurs when people have a child under age 13 "in their care" while doing activities other than primary childcare. For a complete definition, see the Concepts and definitions section of this Technical Note.

Caring for and helping household members also includes a range of activities done to benefit adult members of households, such as providing physical and medical care or obtaining medical services. Doing something as a favor

for or helping another household adult does not automatically result in classification as a helping activity. For example, a report of "helping my spouse cook dinner" is considered a household activity (food preparation), not a helping activity, because cooking dinner benefits the household as a whole. By contrast, doing paperwork for another person usually benefits the individual, so a report of "filling out an insurance application for my spouse" is considered a helping activity.

Caring for and helping nonhousehold members. This category includes time spent in activities done to care for or help others—both children (under age 18) and adults—who do not live in the household. When done for or through an organization, time spent helping nonhousehold members is classified as volunteering, rather than as helping nonhousehold members. Care of nonhousehold children, even when done as a favor or helping activity for another adult, is always classified as caring for and helping nonhousehold children, not as helping another adult.

Working and work-related activities. This category includes time spent working, doing activities as part of one's job, engaging in income-generating activities not as part of one's job, and job search activities. "Working" includes hours spent doing the specific tasks required of one's main or other job, regardless of location or time of day. "Work-related activities" include activities that are not obviously work but are done as part of one's job, such as having a business lunch and playing golf with clients. "Other income-generating activities" are those done "on the side" or under informal arrangement and are not part of a regular job. Such activities might include selling homemade crafts, maintaining a rental property, or having a yard sale. These activities are those for which individuals are paid or will be paid.

Travel time related to working and work-related activities includes time spent traveling to and from work, as well as time spent traveling for work-related, income-generating, and job search activities.

Educational activities. Time spent taking classes for a degree or for personal interest (including attending school virtually and taking internet or other distance-learning courses), time spent doing research and homework, and time spent taking care of administrative tasks related to education (such as registering for classes or obtaining a school ID) are included in this category. For high school students, before- and after-school extracurricular activities (except sports) also are classified as educational activities. Educational activities do not include time spent for classes or training received as part of a job. Time spent helping others with their education-related activities is classified as an activity involving caring for and helping others.

Organizational, civic, and religious activities. This category captures time spent volunteering for or through an organization, performing civic obligations, and participating in religious and spiritual activities. Civic obligations include government-required duties, such as serving jury duty or appearing in court, and activities that assist or influence

government processes, such as voting or attending town hall meetings. Religious activities include those normally associated with membership in or identification with specific religions or denominations, such as attending religious services; participating in choirs, youth groups, or unpaid teaching (unless identified as volunteer activities); and engaging in personal religious practices, such as praying.

Leisure and sports. The leisure and sports category includes time spent in sports, exercise, and recreation; socializing and communicating; and other leisure activities. Sports, exercise, and recreation activities include participating in—as well as attending or watching—sports, exercise, and recreational activities. Recreational activities include yard games like croquet or horseshoes, as well as activities like billiards and dancing. Socializing and communicating includes face-to-face social communication and hosting or attending social functions. Leisure activities include watching television; reading; relaxing or thinking; playing computer, board, or card games; using a computer or the internet for personal interest; playing or listening to music; and other activities, such as attending arts, cultural, and entertainment events.

Telephone calls, mail, and e-mail. This category captures time spent in telephone communication and household or personal mail or e-mail. This category also includes texting and internet voice and video calling. Telephone and internet purchases are classified in Purchasing goods and services. Telephone calls, mail, or e-mail identified as related to work or volunteering are classified as work or volunteering.

Other activities, not elsewhere classified. This residual category includes security procedures related to traveling, traveling not associated with a specific activity category, ambiguous activities that could not be coded, and missing activities. Missing activities result when respondents did not remember what they did for a period of time, or when they considered an activity too private or personal to report.

Processing and estimation

After ATUS data are collected, they go through an editing and imputation procedure. Responses to CPS questions that are re-asked in the ATUS go through the regular CPS edit and imputation procedures. Some item nonresponses for questions unique to the ATUS (such as where an activity took place or how much time was spent doing secondary childcare) also are imputed. Missing activities and missing values for who was present during an activity are never imputed.

ATUS records are weighted quarterly to reduce bias in the estimates due to differences in sampling and response rates across subpopulations and days of the week. Specifically, the data are weighted to ensure the following:

- Weekdays represent about 5/7 of the weighted data, and weekend days represent about 2/7 of the weighted data for the population as a whole and for selected subpopulations. The actual proportions

depend on the number of weekdays and weekend days in a given quarter.

- The sum of the weights is equal to the number of person-days in the quarter for the population as a whole and for selected subpopulations.

Reliability of the estimates

Statistics based on the ATUS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, estimates differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate.

Sample estimates from a given survey design are unbiased when an average of the estimates from all possible samples would yield, hypothetically, the true population value. In this case, the sample estimate and its standard error can be used to construct approximate confidence intervals, or ranges of values that include the true population value with known probabilities. If the process of selecting a sample from the population were repeated many times, an estimate made from each sample, and a suitable estimate of its standard error calculated for each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the true population value. BLS analyses are generally conducted at the 90-percent level of confidence.

The ATUS data also are affected by nonsampling error, which is the average difference between population and sample values for samples generated by a given process. Nonsampling error can occur for many reasons, including failure to sample a segment of the population, inability to obtain information for all people in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data. Errors also could occur if nonresponse is correlated with time use.

Publication requirements

Estimates of average hours per day and participation rates are not published unless there are a minimum number of respondents representing the given population. Additional publication criteria are applied that include the number of respondents who reported doing a specified activity and the standard error or coefficient of variation for the estimate. Estimates that are considered "close to zero" or that round to 0.00, are published as approximately zero or "z". For a detailed description of the statistical reliability criteria necessary for publication, please contact ATUS staff at ATUSinfo@bls.gov.

Table 1. Time spent in primary activities and percent of the civilian population engaging in each activity, averages per day by sex, 2025 annual averages

Activity	Average hours per day, civilian population			Average percent engaged in the activity per day			Average hours per day for people who engaged in the activity		
	Total	Men	Women	Total	Men	Women	Total	Men	Women
Total, all activities ¹	24.00	24.00	24.00	—	—	—	—	—	—

¹ Number was derived by multiplying the "Total employed" by the percent of employed people who worked on an average weekday.

² Number was derived by multiplying the "Total employed" by the percent of employed people who worked on an average Saturday, Sunday, and holiday.

³ Includes self-employed workers whose businesses are unincorporated. Self-employed workers whose businesses are incorporated are classified as wage and salary workers.

⁴ Estimate is suppressed because it does not meet the American Time Use Survey publication standards.

⁵ The earnings data are limited to wage and salary workers (both incorporated and unincorporated self-employed workers are excluded). Each earnings range represents approximately 25 percent of full-time wage and salary workers who held only one job.

NOTE: Includes work at main job only and excludes travel related to work. Data refer to people 15 years and over.

¹ Includes other leisure and sports activities, not elsewhere classified, and travel related to leisure and sports activities.

² Estimate is suppressed because it does not meet the American Time Use Survey publication standards.

³ The earnings data are limited to wage and salary workers (both incorporated and unincorporated self-employed workers are excluded). Each earnings range represents approximately 25 percent of full-time wage and salary workers who held only one job.

NOTE: Unless otherwise specified, data refer to people 15 years and over. People whose ethnicity is identified as Hispanic or Latino may be of any race.
