For release: 10:00 A.M. EDT Wednesday, April 12, 2006

COUNTY EMPLOYMENT AND WAGES: THIRD QUARTER 2005

In September 2005, Lee County, Fla., had the largest over-the-year percentage increase in employment among the largest counties in the United States, according to preliminary data released today by the Bureau of Labor Statistics of the U.S. Department of Labor. Lee County, which includes Fort Myers, experienced an over-the-year employment gain of 11.4 percent, compared with national job growth of 2.0 percent. Passaic County, N.J., an area north of Newark, had the largest over-the-year gain in average weekly wages in the third quarter of 2005, with an increase of 19.0 percent. The U.S. average weekly wage increased by 6.1 percent over the same time span.

Of the 322 largest counties in the U.S., as measured by 2004 annual average employment, 136 had over-the-year percentage growth in employment above the national average in September 2005, and 173 experienced changes below the national average. (See chart 1.) Average weekly wages grew faster than the national average in 132 of the largest U.S. counties, while the percent change in average weekly wages was below the national average in 173 counties. (See chart 2.)

The employment and average weekly wage data by county are compiled under the Quarterly Census of Employment and Wages (QCEW) program, also known as the ES-202 program. The data are derived from reports submitted by employers subject to unemployment insurance (UI) laws. The 8.6 million employer reports cover 132.9 million full- and part-time workers. The attached tables and charts contain data for the

Hurricanes Katrina and Rita

The measures of employment and wages reported in this news release reflect the impact of Hurricane Katrina and ongoing labor market trends. Hurricane Katrina hit the Gulf Coast on August 29, 2005, with catastrophic effects in parts of Louisiana, Mississippi, and Alabama. This event occurred after the August QCEW reference period and before the September period. Its effects are first reflected in the September QCEW employment counts and the wage totals for the third quarter of 2005. QCEW nonresponse adjustment methods were modified for September 2005 to better reflect the impact of the hurricane in parts of Louisiana and Mississippi. For more information, see the QCEW section of the Katrina coverage on the BLS Web site (http://www.bls.gov/katrina/qcewquestions.htm).

Hurricane Rita made landfall September 24, after the September reference period. The impact of this event did not warrant changes to QCEW methodology for the third quarter of 2005.

 growth, and September 2004-05 percent growth in employment

nation and for the 322 U.S. counties with annual average employment levels of 75,000 or more in 2004. September 2005 employment and 2005 third-quarter average weekly wages for all states are provided in table 4 of this release. Final data for all states, metropolitan statistical areas, counties, and the nation through the fourth quarter of 2004 are available on the BLS Web site at http://www.bls.gov/cew/. Preliminary data for first, second, and third quarters of 2005 will be available later in April on the BLS Web site.

Large County Employment

In September 2005, national employment, as measured by the QCEW program, was 132.9 million, up by 2.0 percent from September 2004. The 322 U.S. counties with 75,000 or more employees accounted for 70.6 percent of total U.S. covered employment and 76.4 percent of total covered wages. These 322 counties had a net job gain of 1,776,000 over the year, accounting for 67.9 percent of the U.S. employment increase. Employment increased in 275 of the large counties from September 2004 to September 2005. Lee County, Fla., had the largest over-the-year percentage increase in employment (11.4 percent). Seminole, Fla., had the next largest increase, 10.7 percent, followed by the counties of Collier, Fla. (8.2 percent), Kern, Calif. (7.6 percent), and Lake and Volusia, Fla. (7.4 percent each). (See table 1.)

Employment declined in 35 large counties from September 2004 to September 2005. The largest percentage decline in employment was in Orleans County, La. (-26.3 percent), followed by the counties of Jefferson, La. (-25.6 percent), and Harrison, Miss. (-13.9 percent). Employment losses in these three Gulf Coast counties reflected the devastation caused by Hurricane Katrina. Hinds, Miss., located farther inland and within 100 miles of the path of Katrina, had the next largest employment decline (-2.1 percent). Winnebago, Ill., followed with a 1.4 percent decline.

The largest gains in employment from September 2004 to September 2005 were recorded in the counties of Maricopa, Ariz. (105,500), Los Angeles, Calif. (72,100), Harris, Texas (61,900), Clark, Nev. (58,700), and Broward, Fla. (44,900). (See table A.)

The largest decline in employment occurred in Orleans County, La. (-63,600), followed by the counties of Jefferson, La. (-54,400), Harrison, Miss. (-12,500), Wayne, Mich. (-9,900), and Hinds, Miss. (-2,700).

Large County Average Weekly Wages

The national average weekly wage in the third quarter of 2005 was \$777. Average weekly wages were higher than the national average in 115 of the largest 322 U.S. counties. New York County, N.Y., held the top position among the highest-paid large counties with an average weekly wage of \$1,419. Santa Clara, Calif., was second with an average weekly wage of \$1,403, followed by Arlington, Va. (\$1,292), San Mateo, Calif. (\$1,268), and Washington, D.C. (\$1,265). (See table B.)

There were 206 counties with an average weekly wage below the national average in the third quarter of 2005. The lowest average weekly wages were reported in Cameron County, Texas (\$486), followed by the counties of Hidalgo, Texas (\$499), Horry, S.C. (\$505), and Webb, Texas, and Yakima, Wash. (\$525 each). (See table 1.)

Over the year, the national average weekly wage rose by 6.1 percent. Among the largest counties, Passaic, N.J., led the nation in growth in average weekly wages, with an increase of 19.0 percent from the third quarter of 2004. Fort Bend, Texas, was second with 15.4 percent growth, followed by the counties of Boulder, Colo. (13.8 percent), and San Mateo, Calif., and Harrison, Miss. (12.7 percent each). The average weekly wage growth rate for Harrison, Miss., and the 10.7 percent wage gain for Orleans, La., were boosted as a result of the disproportionate job and pay losses in lower-paid industries following Hurricane Katrina.

Five counties experienced over-the-year declines in average weekly wages. Clayton County, Ga., had the largest decrease, -5.1 percent, followed by the counties of Benton, Ark. (-1.2 percent), Trumbull, Ohio (-0.6 percent), Saginaw, Mich. (-0.4 percent), and St. Joseph, Ind. (-0.1 percent).

Ten Largest U.S. Counties

Of the 10 largest U.S. counties (based on 2004 annual average employment levels), all reported increases in employment from September 2004 to September 2005. Maricopa County, Ariz., experienced the fastest growth in employment among the largest counties, with a 6.5 percent increase. Within Maricopa County, employment rose in every industry group except information. The largest gains were in construction (15.0 percent) and professional and business services (8.2 percent). (See table 2.) Harris, Texas, had the next largest increase in employment, 3.4 percent, followed by Miami-Dade, Fla. (3.3 percent). The smallest employment gains occurred in Cook County, Ill. (0.7 percent), followed by the counties of San Diego, Calif. (1.6 percent), and New York, N.Y. (1.7 percent).

All of the 10 largest U.S. counties saw over-the-year increases in average weekly wages. Miami-Dade, Fla., had the fastest growth in wages among the 10 largest counties, 8.9 percent. Within Miami-Dade County, wages increased the most in government (13.2 percent) and manufacturing (11.2 percent). Maricopa, Ariz., was second in wage growth, with a gain of 8.1 percent, followed by Harris County, Texas (7.8 percent). The smallest wage gains among the 10 largest counties occurred in Los Angeles, Calif., and Cook, Ill. (5.5 percent each), followed by Dallas County, Texas (6.6 percent).

Largest County by State

Table 3 shows September 2005 employment and the 2005 third-quarter average weekly wage in the largest county in each state (based on 2004 annual average employment levels). (This table includes two counties—Yellowstone, Mont., and Laramie, Wyo.—that have employment levels below 75,000.) The employment levels in these counties in September 2005 ranged from approximately 4.1 million in Los Angeles County, Calif., to 41,000 in Laramie County, Wyo. The highest average weekly wage of these counties was in New York, N.Y. (\$1,419), while the lowest average weekly wage was in Yellowstone, Mont. (\$619).

For More Information

For additional information about the quarterly employment and wages data, please read the Technical Note or visit the QCEW Web site at http://www.bls.gov/cew/. Additional information about the QCEW data also may be obtained by e-mailing QCEWinfo@bls.gov or by calling (202) 691-6567.

Regional Quarterly Census of Employment and Wages News Releases

Several BLS regional offices are issuing QCEW news releases targeted to local data users. For links to these releases, see http://www.bls.gov/cew/cewregional.htm.

Technical Note

These data are the product of a federal-state cooperative program, the Quarterly Census of Employment and Wages (QCEW) program, also known as the ES-202 program. The data are derived from summaries of employment and total pay of workers covered by state and federal unemployment insurance (UI) legislation and provided by State Workforce Agencies (SWAs). The summaries are a result of the administration of state unemployment insurance programs that require most employers to pay quarterly taxes based on the employment and wages of workers covered by UI. Data for 2005 are preliminary and subject to revision.

For purposes of this release, large counties are defined as having employment levels of 75,000 or greater. In addition, data for San Juan, Puerto Rico, are provided, but not used in calculating U.S. averages, rankings, or in the analysis in the text. Each year, these large counties are selected on the basis of the preliminary annual average of employment for the previous year. The 323 counties presented in this release were derived using 2004 preliminary annual averages of employment. All of the 318 counties that were published in the 2004 releases are included in the 2005 releases. The following counties grew enough in 2004 to be included in the 2005 releases: Lake, Fla., Wyandotte, Kan., Harford, Md., Washington, Pa., and Whatcom, Wash. These counties will be included in all 2005 quarterly releases. The counties in table 2 are selected and sorted each year based on the annual average employment from the preceding year.

The preliminary QCEW data presented in this release may differ from data released by the individual states. These potential differences result from the states' continuing receipt

	QCEW	BED	CES
Source	• Count of UI administrative records submitted by 8.6 million establish- ments	• Count of longitudinally-linked UI administrative records submitted by 6.7 million private-sector employers	• Sample survey: 400,000 establishments
Coverage	• UI and UCFE coverage, including all employers subject to state and federal UI laws	• UI coverage, excluding govern- ment, private households, and estab- lishments with zero employment	 Nonfarm wage and salary jobs: UI coverage, excluding agriculture, private households, and self-employed workers Other employment, including railroads, religious organizations, and other non-UI-covered jobs
Publication frequency	• Quarterly - 7 months after the end of each quarter	• Quarterly - 8 months after the end of each quarter	 Monthly Usually first Friday of following month
Use of UI file	• Directly summarizes and pub- lishes each new quarter of UI data	• Links each new UI quarter to longitudinal database and directly summarizes gross job gains and losses	• Uses UI file as a sampling frame and annually realigns (benchmarks) sample estimates to first quarter UI levels
Principal products	• Provides a quarterly and annual universe count of estab- lishments, employment, and wages at the county, MSA, state, and national levels by detailed industry	 Provides quarterly employer dy- namics data on establishment open- ings, closings, expansions, and con- tractions at the national level by NAICS supersectors and by size of firm Future expansions will include data at the county, MSA, and state level 	• Provides current monthly estimates of employment, hours, and earnings at the MSA, state, and national lev- el by industry
Principal uses	 Major uses include: Detailed locality data Periodic universe counts for benchmarking sample survey estimates Sample frame for BLS establishment surveys 	 Major uses include: Business cycle analysis Analysis of employer dynamics underlying economic expansions and contractions Analysis of employment expan- sion and contraction by size of firm 	 Major uses include: Principal national economic indicator Official time series for employment change measures Input into other major economic indicators

Summary of Major Differences between QCEW, BED, and CES Employment Measures

of UI data over time and ongoing review and editing. The individual states determine their data release timetables.

Differences between QCEW, BED, and CES employment measures

The Bureau publishes three different establishment-based employment measures for any given quarter. Each of these measures—QCEW, Business Employment Dynamics (BED), and Current Employment Statistics (CES)—makes use of the quarterly UI employment reports in producing data; however, each measure has a somewhat different universe coverage, estimation procedure, and publication product.

Differences in coverage and estimation methods can result in somewhat different measures of employment change over time. It is important to understand program differences and the intended uses of the program products. (See table on the previous page.) Additional information on each program can be obtained from the program Web sites shown in the table on the previous page.

Coverage

Employment and wage data for workers covered by state UI laws are compiled from quarterly contribution reports submitted to the SWAs by employers. For federal civilian workers covered by the Unemployment Compensation for Federal Employees (UCFE) program, employment and wage data are compiled from quarterly reports that are sent to the appropriate SWA by the specific federal agency. In addition to the quarterly contribution reports, employers who operate multiple establishments within a state complete a questionnaire, called the "Multiple Worksite Report," which provides detailed information on the location and industry of each of their establishments. The employment and wage data included in this release are derived from microdata summaries of more than 8 million employer reports of employment and wages submitted by states to the BLS. These reports are based on place of employment rather than place of residence.

UI and UCFE coverage is broad and basically comparable from state to state. In 2004, UI and UCFE programs covered workers in 129.3 million jobs. The estimated 124.4 million workers in these jobs (after adjustment for multiple jobholders) represented 96.6 percent of civilian wage and salary employment. Covered workers received \$5.088 trillion in pay, representing 94.4 percent of the wage and salary component of personal income and 43.4 percent of the gross domestic product.

Major exclusions from UI coverage include self-employed workers, most agricultural workers on small farms, all members of the Armed Forces, elected officials in most states, most employees of railroads, some domestic workers, most student workers at schools, and employees of certain small nonprofit organizations.

State and federal UI laws change periodically. These changes may have an impact on the employment and wages reported by employers covered under the UI program. Coverage changes may affect the over-the-year comparisons presented in this news release. Beginning with the first quarter of 2005, Oregon implemented a change in their state UI laws. This change extended UI coverage to providers of home care for the elderly. These providers are now considered state workers for purposes of UI benefits.

Concepts and methodology

Monthly employment is based on the number of workers who worked during or received pay for the pay period including the 12th of the month. With few exceptions, all employees of covered firms are reported, including production and sales workers, corporation officials, executives, supervisory personnel, and clerical workers. Workers on paid vacations and part-time workers also are included.

Average weekly wage values are calculated by dividing quarterly total wages by the average of the three monthly employment levels (all employees, as described above) and dividing the result by 13, for the 13 weeks in the quarter. These calculations are made using unrounded employment and wage values. The average wage values that can be calculated using rounded data from the BLS database may differ from the averages reported. Included in the quarterly wage data are non-wage cash payments such as bonuses, the cash value of meals and lodging when supplied, tips and other gratuities, and, in some states, employer contributions to certain deferred compensation plans such as 401(k) plans and stock options. Over-the-year comparisons of average weekly wages may reflect fluctuations in average monthly employment and/or total quarterly wages between the current quarter and prior year levels.

Average weekly wages are affected by the ratio of full-time to part-time workers as well as the number of individuals in highpaying and low-paying occupations and the incidence of pay periods within a quarter. For instance, the average weekly wage of the work force could increase significantly when there is a large decline in the number of employees that had been receiving below-average wages. Wages may include payments to workers not present in the employment counts because they did not work during the pay period including the 12th of the month. When comparing average weekly wage levels between industries, states, or quarters, these factors should be taken into consideration.

Federal government pay levels are subject to periodic, sometimes large, fluctuations due to a calendar effect that consists of some quarters having more pay periods than others. Most federal employees are paid on a biweekly pay schedule. As a result of this schedule, in some quarters, federal wages contain payments for six pay periods, while in other quarters their wages include payments for seven pay periods. Over-the-year comparisons of average weekly wages may reflect this calendar effect. Higher growth in average weekly wages may be attributed, in part, to a comparison of quarterly wages for the current year, which include seven pay periods, with year-ago wages that reflect only six pay periods. An opposite effect will occur when wages in the current period, which contain six pay periods, are compared with year-ago wages that include seven pay periods. The effect on over-the-year pay comparisons can be pronounced in federal government due to the uniform nature of federal payroll processing. This pattern may exist in private sector pay, however, because there are more pay period types (weekly, biweekly, semimonthly, monthly) it is less pronounced. The effect is most visible in counties with large concentrations of federal employment.

In order to ensure the highest possible quality of data, states verify with employers and update, if necessary, the industry, location, and ownership classification of all establishments on a 3-year cycle. Changes in establishment classification codes resulting from this process are introduced with the data reported for the first quarter of the year. Changes resulting from improved employer reporting also are introduced in the first quarter.

QCEW data are not designed as a time series. QCEW data are simply the sums of individual establishment records and reflect the number of establishments that exist in a county or industry at a point in time. Establishments can move in or out of a county or industry for a number of reasons—some reflecting economic events, others reflecting administrative changes. For example, economic change would come from a firm relocating into the county; administrative change would come from a company correcting its county designation.

The over-the-year changes of employment and wages presented in this release have been adjusted to account for most of the administrative corrections made to the underlying establishment reports. This is done by modifying the prior-year levels used to calculate the over-the-year changes. Percent changes are calculated using an adjusted version of the final 2004 quarterly data as the base data. The adjusted prior-year levels used to calculate the over-the-year percent change in employment and wages are not published. These adjusted prioryear levels do not match the unadjusted data maintained on the BLS Web site. Over-the-year change calculations based on data from the Web site, or from data published in prior BLS news releases, may differ substantially from the over-the-year changes presented in this news release.

The adjusted data used to calculate the over-the-year change measures presented in this release account for most of the administrative changes—those occurring when employers update the industry, location, and ownership information of their establishments. The most common adjustments for administrative change are the result of updated information about the county location of individual establishments. Included in these adjustments are administrative changes involving the classification of establishments that were previously reported in the unknown or statewide county or unknown industry categories. The adjusted data do not account for administrative changes caused by multi-unit employers who start reporting for each individual establishment rather than as a single entity.

The adjusted data used to calculate the over-the-year change measures presented in any County Employment and Wages news release are valid for comparisons between the starting and ending points (a 12-month period) used in that particular release. Comparisons may not be valid for any time period other than the one featured in a release even if the changes were calculated using adjusted data.

County definitions are assigned according to Federal Information Processing Standards Publications (FIPS PUBS) as issued by the National Institute of Standards and Technology, after approval by the Secretary of Commerce pursuant to Section 5131 of the Information Technology Management Reform Act of 1996 and the Computer Security Act of 1987, Public Law 104-106. Areas shown as counties include those designated as independent cities in some jurisdictions and, in Alaska, those designated as census areas where counties have not been created. County data also are presented for the New England states for comparative purposes even though townships are the more common designation used in New England (and New Jersey). The regions referred to in this release are defined as census regions.

Additional statistics and other information

An annual bulletin, *Employment and Wages*, features comprehensive information by detailed industry on establishments, employment, and wages for the nation and all states. The 2004 edition of this bulletin contains selected data produced by Business Employment Dynamics (BED) on job gains and losses, as well as selected data from the fourth quarter 2004 version of this news release. *Employment and Wages Annual Averages, 2004* is now available for sale from the United States Government Printing Office, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250, telephone 866-512-1800, outside of Washington, D.C. Within Washington, D.C., the telephone number is 202-512-1800. The fax number is 202-512-2104. Also, the 2004 bulletin is available in a portable document format (PDF) on the BLS Web site at http://www.bls.gov/cew/cewbultn04.htm.

News releases on quarterly measures of gross job flows also are available upon request from the Division of Administrative Statistics and Labor Turnover (Business Employment Dynamics), telephone 202-691-6467; (http://www.bls.gov/bdm/); (e-mail: BDMInfo@bls.gov).

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

¹ Includes workers covered by Unemployment Insurance (UI) and Unemployment Compensation for Federal Employees (UCFE) programs. These 322 U.S. counties comprise 70.6 percent of the total covered workers in the U.S.

² Data are preliminary.

 ² Data are preminary.
 ³ Includes areas not officially designated as counties. See Technical Note.
 ⁴ Percent changes were computed from quarterly employment and pay data adjusted for noneconomic county reclassifications. See Technical Note. ⁵ Average weekly wages were calculated using unrounded data. ⁶ Totals for the United States do not include data for Puerto Rico or the Virgin Islands.

⁷ Data do not meet BLS or State agency disclosure standards.
⁸ This county was not included in the U.S. rankings.
