## EMPLOYEE BENEFITS IN THE UNITED STATES, MARCH 2009

While about 70 percent of workers in private industry had access to employer provided medical care benefits in March 2009, only 25 percent of the lowest wage earners - those with average hourly wages in the lowest 10 percent of all private industry wages - had such access, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. By contrast, nearly all workers with hourly wages in the highest 10 percent of all private industry wages had access to medical care benefits. (See table 2.) A worker with access to medical care benefits is defined as having an employer-provided medical plan available for use, regardless of the worker's decision to enroll or participate in the plan. These data are from the National Compensation Survey (NCS), which provides comprehensive measures of occupation earnings, compensation cost trends, and incidence and provisions of employee benefit plans. Farm and private household workers, the self-employed, and Federal government workers are excluded from the survey.

The following are additional findings:

- Medical care benefits were available to 71 percent of private industry workers, compared with 88 percent among State and local government workers. About half of private industry workers participated in a plan, less than the 73 percent of State and local government workers. (See table 2.)
- Employers paid 82 percent of the cost of premiums for single coverage and 71 percent of the cost for family coverage, for workers participating in employer sponsored medical plans. The employer share for single coverage was greater in State and local government ( 90 percent) than in private industry (80 percent). For family coverage, the employer share of premiums was similar for private industry and State and local government, 70 and 73 percent, respectively. (See tables 3 and 4.)
- Among full-time State and local government workers, virtually all (99 percent) had access to retirement and medical care benefits. Of full-time workers in private industry, only 76 percent had access to retirement benefits and 86 percent to medical care. Part-time workers had less access to these benefits in both private industry and in State and local government; about 40 percent of parttime workers had access to retirement benefits and about 25 percent had access to medical care benefits. (See tables 1 and 2.)
- Sixty-seven percent of private industry employees had access to retirement benefits, compared with 90 percent of State and local government employees. Eighty-six percent of State and local government employees participated in a retirement plan, a significantly greater percentage than for private industry workers, at 51 percent. (See table 1.) The NCS has broadened the definition of access to retirement benefits. For more detail on this change, see the article in Compensation and Working Conditions Online at http://www.bls.gov/opub/cwc/cm20081219ar01p1.htm.
- Paid sick leave was available to approximately two-thirds of workers. Nearly 90 percent of State and local government workers had access, significantly greater than the approximately 60 percent of private industry workers. (See table 6.)

The incidence of employee benefits varied by worker characteristics and by establishment characteristics. For example, private industry workers in service occupations have less access to medical care benefits (46 percent) than private industry management, professional, and related workers (86 percent). Also, patterns of incidence varied between private industry and State and local government. State and local government workers in service occupations have less access to medical care than in management, professional, and related occupations (81 and 90 percent, respectively). The disparity between these two occupational groups is larger in private industry ( 46 and 86 percent, respectively).

Access to paid holidays and paid vacation leave was greater for professional and related workers in private industry ( 85 and 83 percent, respectively) than in State and local government ( 51 and 37 percent, respectively). This is due in part to the fact that in State and local government, teachers make up a larger percent of the professional and related occupations than in private industry. Teachers and other employees in educational services are commonly employed on the basis of 9-month contracts, and often do not receive formal paid holiday and vacation benefits. (See Technical Note for more information on this topic.)

More information can be obtained by calling (202) 691-6199, sending e-mail to NCSinfo@bls.gov, or by visiting the BLS Internet site, http://www.bls.gov/ncs/home.htm. Also, BLS Regional Information offices, which are listed on the Internet site, http://www.bls.gov/bls/regncon.htm, are available to answer questions.

More information will be published later this summer. Included will be March 2009 data for civilian, private industry, and State and local government workers on the incidence and provisions of health care benefits, retirement benefits, life insurance, short-term and long-term disability benefits, paid holidays and vacations, and other selected benefits. These results will be found on the BLS Web site http://www.bls.gov/ncs/ebs.

In addition, starting in the fall of 2009, new editions of Program Perspectives will be published, and these publications will feature the latest benefits data. Program Perspectives brings together employee benefits information from various National Compensation Survey publications into one convenient and easy-to-read publication. For the latest publication, see: http://www.bls.gov/ncs/ebs.

[^0]further explanation.
4 The percentile groupings are based on the average wage for each occupation surveyed, which may include workers both above and below the threshold. The percentile values are based on the estimates published in the "National Compensation Survey: Occupational Earnings in the United States, 2008." See Technical Note for more details.

NOTE: Dash indicates no workers in this category or data did not meet publication criteria.

1 Includes workers in the private nonfarm economy except those in private households, and workers in the public sector, except the federal government. See Technical Note for further explanation.

2 The percentile groupings are based on the average wage for each occupation surveyed, which may include workers both above and below the threshold. The percentile values are based on the
estimates published in the "National Compensation Survey: Occupational Earnings in the United States, 2008." See Technical Note for more details.

NOTE: Dash indicates no workers in this category or data did not meet publication criteria.

[^4]Survey: Occupational Earnings in the United States, 2008." See Technical Note for more details.

NOTE: Dash indicates no workers in this category or data did not meet publication criteria.

## Technical Note

Data in this release are from the National Compensation Survey (NCS), conducted by the U.S. Department of Labor, Bureau of Labor Statistics (BLS). This release contains March 2009 data on civilian, private industry, and State and local government workers in the United States. Under the NCS program, information on the incidence and provision of benefits is published in several stages. This news release provides data on the incidence of (access to and participation in) selected benefits and the share of premiums paid by employers and employees for medical care. An extensive number of tables on the incidence of selected benefits will be available in the annual bulletin to be published in late summer, 2009. Data on detailed provisions of health insurance and retirement benefits in private industry for 2009 will be available in 2010. Previous publications containing information on employee benefits for private industry and State and local government workers are available on the BLS website http://www.bls.gov/ncs/ebs.

## Calculation details

Averages for occupations within an establishment were used to produce estimates for worker groups averaging hourly pay within the six earnings percentiles: Lowest 10 percent, lowest 25 percent, second 25 percent, third 25 percent, highest 25 percent, and highest 10 percent. The percentiles are computed using earnings reported for individual workers in sampled establishment jobs and their scheduled hours of work. Establishments in the survey may report only individual worker earnings for each sampled job. For the calculation of percentile estimates, the individual worker hourly earnings are appropriately weighted and then arrayed from lowest to highest.

The published 10th, 25th, 50th, 75th, and 90th percentiles designate position in the earnings distribution within each published occupation. At the 50th percentile, the median, half of the hours are paid the same as or more than the rate shown in the data tables, and half are paid the same as or less than the rate shown. At the 25th percentile, one-fourth of the hours are paid the same as or less than the rate shown. At the 75th percentile, one-fourth are paid the same as or more than the rate shown. The 10th and 90th percentiles follow the same logic. The percentile values are based on wages to be published in the bulletin National Compensation Survey: Occupational Earnings in the United States, 2008. Values corresponding to the percentiles used in the tables are as follows:

| Characteristics | Hourly wage percentiles |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | 10 | 25 | 50 <br> (median) | 75 | 90 |
| Civilian workers | $\$ 8.24$ | $\$ 11.00$ | $\$ 16.25$ | $\$ 25.48$ | $\$ 37.86$ |
| Private industry workers | $\$ 8.00$ | $\$ 10.50$ | $\$ 15.50$ | $\$ 24.22$ | $\$ 36.43$ |
| State and local government workers | $\$ 11.35$ | $\$ 14.98$ | $\$ 21.43$ | $\$ 31.55$ | $\$ 43.23$ |

The tables on employer and employee medical premiums (tables 3 and 4) include participants in all medical plans, with calculations for both single and family coverage. The calculations are not based on actual decisions regarding medical coverage made by employees within the occupations. Rather, the premium calculations are based on the assumption that all employees in the occupation have identical coverage.

## Take-up rates

Take-up rates are the percentage of workers with access to a plan who participate in the plan. They are computed by using the number of workers participating in a plan divided by the number of workers with access to the plan, multiplied by 100, and rounded to the nearest one percent. Since the computation of take-up rates is based on the number of workers collected rather than rounded percentage estimates, the take-up rates in the tables may not equal the ratio of participation to access estimates.

## Leave benefits for teachers

Primary, secondary, and special education teachers typically have a work schedule of 37 or 38 weeks per year. Because of this work schedule, they are generally not offered vacation or holidays. In many cases, the time off during winter and spring breaks during the school year is not considered vacation days for the purposes of this survey.

## Survey scope

The March 2009 NCS benefits survey represented about 122 million civilian workers; of this number, about 102 million were private industry workers and 19 million, State and local government workers (see Appendix table 2). For purposes of this study, a private establishment is an economic unit that produces goods or services, a central administrative office, or an auxiliary unit providing support services to a company. For private industries, the establishment is usually at a single physical location. For State and local governments, an establishment is defined as an agency or entity such as a school district, college, university, hospital, nursing home, administrative body, court, police department, fire department, health or social service operation, highway maintenance operation, urban transit operation, or other governmental unit. It provides services under the authority of a specific State or local government organization within a defined geographic area or jurisdiction. The survey sample weights were adjusted to reflect the March 2009 employment figures from the Current Employment Statistics survey.

The nine census divisions are defined as follows: New England-Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; Middle Atlantic-New Jersey, New York, and Pennsylvania; East North Central—Illinois, Indiana, Michigan, Ohio, and Wisconsin; West North Central—Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota; South Atlantic-Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia; East South Central—Alabama, Kentucky, Mississippi, and Tennessee; West South Central—Arkansas, Louisiana, Oklahoma, and Texas; Mountain-Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming; and Pacific—Alaska, California, Hawaii, Oregon, and Washington.

## Sample design and data collection

The sample for this survey was selected by using a 3-stage design. The first stage involved the selection of areas. The NCS State and local government sample consists of 152 areas that represent the Nation's 361 metropolitan statistical areas and 573 micropolitan statistical areas, as defined by the Office of Management and Budget in December 2003, and the remaining portions of the 50 States. The private industry sample has begun the transition to the December 2003 definition with replacement of one-fifth of the sample under the new area definitions; the private industry sample currently consists of 227 areas.

In the second stage, the sample of establishments was drawn by first stratifying the sampling frame by industry and implicitly by establishment size. The list of establishments from which the survey sample was selected was developed from State unemployment insurance reports and is based on the 2007 North American Industry Classification System (NAICS).

The third stage of sample selection was the drawing of a probability sample of occupations within a sampled establishment. Identification of the occupations for which data were to be collected was a 4 -step process:

## 1. Probability-proportional-to-size selection of establishment jobs

2. Classification of jobs into occupations based on the 2000 Standard Occupational Classification (SOC) system
3. Characterization of jobs as full time vs. part time, union vs. nonunion, and time versus incentive
4. Determination of the level of work of each job

For additional technical information, see the BLS Handbook of Methods, available online at http://www.bls.gov/opub/hom/home.htm.

Definition of terms
Civilian workers. Private industry and State and local government workers.
Full-time worker. Any employee whom the employer considers to be full time.
Part-time worker. Any employee whom the employer considers to be part time.
Nonunion worker. An employee in an occupation not meeting the conditions for union coverage.
Union worker. Any employee is in a union occupation when all of the following conditions are met:

- A labor organization is recognized as the bargaining agent for all workers in the occupation.
- Wage and salary rates are determined through collective bargaining or negotiations.
- Settlement terms, which must include earnings provisions and may include benefit provisions, are embodied in a signed, mutually binding collective bargaining agreement

Survey estimation methods
The survey uses an estimator that assigns the inverse of each sample unit's probability of selection as a weight to the unit's data at each stage of sample selection and four weight adjustment factors. The first factor adjusts for establishment nonresponse and the second factor adjusts for occupational nonresponse. The third factor adjusts for any special situations that may have occurred during data collection. The fourth factor, poststratification, also called benchmarking, is introduced to adjust the estimated employment totals to actual counts of employment by industry for the survey reference date.

For additional technical information, see the BLS Handbook of Methods, available online at http://www.bls.gov/opub/hom/home.htm.

## Reliability of estimates

The statistics in this summary are estimates derived from a sample of usable occupation quotes selected from the responding establishments. They are not tabulations based on data from all employees in establishments within the scope of the survey. Consequently, the data are subject to sampling and nonsampling errors.

Sampling errors are the differences that can arise between results derived from a sample and those computed from observations of all units in the population being studied. The sample used for this survey is one of a number of possible samples of the same size that could have been selected using the sample design. Estimates derived from the different samples would differ from one another.

A measure of the variation among these differing estimates is the standard error. It can be used to measure the precision with which an estimate from a particular sample approximates the expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error. The statements of comparison appearing in this publication are significant at a 1.6 standard error level or better. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference. Standard errors can be used to evaluate published series. To assist users in ascertaining the reliability of series, the standard errors for all estimates are available on the BLS Web site http://www.bls.gov/ncs/ebs.

Nonsampling errors also affect survey results. They can be attributed to many sources, such as the inability to obtain information for some establishments, difficulties with survey definitions, inability of the
respondents to provide correct information; or mistakes in recording or coding the data obtained. Although they were not specifically measured, the nonsampling errors were expected to be minimal due to the extensive training of the field economists who gathered the survey data, computer edits of the data, and detailed data review.

## Survey response

The March 2009 benefits survey included a sample of 18,287 establishments. The definitions in Appendix table 1 are as follows:

Responding. The establishment provided information on at least one usable occupation. An occupation is classified as usable if the following data are present: occupational characteristics (full- vs. part-time schedule, union vs. nonunion status, and time vs. incentive pay type), work schedule, and wage data.

Refused or unable to provide data. The establishment did not provide earnings, occupational classification, worker characteristics, and work schedule data for any occupation.

Out of business or not in survey scope. The establishment is no longer in operation, following a bankruptcy, for example. Establishments not in the survey scope include farm and private households, the self-employed, the Federal government, and locations of an establishment out of the sampled area. Also excluded are establishments with no workers within the survey scope (if all employees are also owners, for example).

## Obtaining information

For research articles on employee benefits, see the Monthly Labor Review or Compensation and Working Conditions Online at the BLS Web sites http://www.bls.gov/opub/mlr/home.htm and http://www.bls.gov/opub/cwc/home.htm. For more detailed information on the NAICS and SOC classification systems, including background information, see the BLS Web sites http://www.bls.gov/bls/naics.htm and http://www.bls.gov/soc/home.htm.

Additional information about the NCS may be obtained by calling (202) 691-6199. You may also write to the U.S. Bureau of Labor Statistics, Division of Compensation Data Analysis and Planning, 2 Massachusetts Ave., NE, Room 4175, Washington, D.C. 20212-0001, or send e-mail to NCSinfo@bls.gov. The data contained in this summary are also available on the BLS Internet site: http://www.bls.gov/ncs/ebs. Users may access benefits data from previous surveys through a variety of tools available on the same page. Material in this summary is in the public domain and, with appropriate credit, may be reproduced without permission. This information will be made available to sensory-impaired individuals upon request. Voice telephone: (202) 6915200; Federal Relay Service: 1-800-877-8339.

## Appendix table 1. Survey establishment response, National Compensation Survey, March 2009

| Establishments | Total | Private industry | State and local governments |
| :---: | :---: | :---: | :---: |
| Total in sampling frame ${ }^{1}$............................. | 5,389,642 | 5,174,044 | 215,598 |
| Total in sample | 18,287 | 16,265 | 2,022 |
| Responding .... | 10,570 | 8,782 | 1,788 |
| Refused or unable to provide data | 4,979 | 4,766 | 213 |
| Out of business or not in survey scope ..... | 2,738 | 2,717 | 21 |

1 The list of establishments from which the survey sample was selected (sampling frame) was developed from State unemployment insurance reports and is based on the 2007 North American Industry Classification System (NAICS). For private
industries, an establishment is usually a single physical location. For State and local governments, an establishment is defined as all locations of a government entity.

## Appendix table 2. Number of workers ${ }^{1}$ represented, National Compensation Survey, March 2009

| Occupational group ${ }^{2}$ | Civilian workers | Private industry workers | State and local government workers |
| :---: | :---: | :---: | :---: |
| All workers | 121,695,200 | 102,319,600 | 19,375,600 |
| Management, professional, and related | 34,980,300 | 24,291,000 | 10,689,200 |
| Management, business, and financial | 9,414,900 | 7,783,200 | 1,631,600 |
| Professional and related | 25,565,400 | 16,507,800 | 9,057,600 |
| Teachers | 6,301,600 | - | 4,964,500 |
| Primary, secondary, and special education school teachers | 4,294,000 | - | 3,695,200 |
| Registered nurses | 2,679,700 | 2,316,200 | 363,500 |
| Service | 25,667,100 | 21,548,200 | 4,118,900 |
| Protective service | 3,225,000 | 1,363,700 | 1,861,300 |
| Sales and office | 32,157,100 | 29,352,100 | 2,805,000 |
| Sales and related | 12,016,500 | 11,867,400 | 149,100 |
| Office and administrative support | 20,140,600 | 17,484,700 | 2,655,800 |
| Natural resources, construction, and maintenance | 10,660,700 | 9,679,400 | 981,300 |
| Construction, extraction, farming, fishing, and forestry | 5,575,200 | 5,023,700 | 551,500 |
| Installation, maintenance, and repair .... | 5,085,500 | 4,655,700 | 429,900 |
| Production, transportation, and material moving $\qquad$ | 18,230,000 | 17,448,800 | 781,200 |
| Production | 8,981,800 | 8,851,900 | 129,900 |
| Transportation and material moving ...... | 9,248,200 | 8,596,900 | 651,300 |

1 The number of workers represented by the survey are rounded to the nearest 100. Estimates of the number of workers provide a description of the size and composition of the labor force included in the survey. Estimates are not intended, however, for comparison to other statistical series to measure
employment trends or levels.
2 The 2000 Standard Occupational Classification system is used to classify workers.

NOTE: Dashes indicate that no data were reported or that data did not meet publication criteria.

[^0]:    ${ }^{1}$ Includes defined benefit pension plans and defined contribution retirement plans. Workers are considered as having access or as participating if they have access to or participate in at least one of these plan types.

    2 The take-up rate is an estimate of the percentage of workers with access to a plan who participate in the plan, rounded for presentation. See Technical Note for more details.
    ${ }^{3}$ Includes workers in the private nonfarm economy except those in private households, and workers in the public sector, except the federal government. See Technical Note for
