FOR RELEASE: 10:00 A.M. EDT WEDNESDAY, SEPTEMBER 21, 2005

EMPLOYER COSTS FOR EMPLOYEE COMPENSATION—JUNE 2005

Employer costs for employee compensation averaged \$25.86 per hour worked in June 2005, the U.S. Department of Labor's Bureau of Labor Statistics reported today. Wages and salaries, which averaged \$18.21, accounted for 70.4 percent of these costs, while benefits, which averaged \$7.64, accounted for the remaining 29.6 percent. (See table 1.) Employer Costs for Employee Compensation, based on the National Compensation Survey, measures employer costs for wages, salaries, and employee benefits for nonfarm private and State and local government workers.

Costs for legally required benefits, including Social Security, Medicare, unemployment insurance, and workers' compensation, averaged \$2.12 per hour (8.2 percent of total compensation). Employer costs for life, health, and disability insurance benefits averaged \$2.05 (7.9 percent); paid leave benefits (vacations, holidays, sick leave, and other leave) averaged \$1.70 (6.6 percent); and retirement and savings benefits averaged \$1.09 (4.2 percent) per hour worked.

Private industry

In June 2005, private industry employer compensation costs averaged \$24.24 per hour worked. Wages and salaries averaged \$17.21 per hour (71.0 percent), while benefits averaged \$7.03 (29.0 percent). Employer costs for paid leave averaged \$1.54 per hour worked (6.3 percent), supplemental pay averaged 69 cents (2.9 percent), insurance benefits averaged \$1.76 (7.3 percent), retirement and savings averaged 88 cents (3.6 percent), and legally required benefits averaged \$2.12 (8.7 percent) per hour worked. (See table 5.)

Employer costs for retirement benefits varied by industry, occupation, bargaining status, region, and establishment size. These differences reflect in part the varying incidence of benefit coverage among these groups. The National Compensation Survey also produces comprehensive data on the percentage of workers with access to and participation in various employer provided benefit plans. For more information see the Internet site http://www.bls.gov/ncs/ebs/home.htm.

Retirement and savings benefit costs in private industry

In June 2005, average costs in private industry for retirement and savings benefits were 88 cents per hour worked, or 3.6 percent of total compensation. The average cost per hour worked for both defined benefit plans and defined contribution retirement plans was 44 cents (1.8 percent of total compensation). Defined benefit plans typically specify a benefit based on age, years of service, and earnings; defined contribution plans are usually based on employer contributions to individual employee accounts. (See table 5.)

Among occupational groups, retirement and savings costs ranged from 18 cents per hour worked for service occupations to \$1.75 for management, professional, and related occupations. Sales and office occupations averaged 55 cents; production, transportation, and material moving occupations, 86 cents; and natural resources, construction, and maintenance occupations, \$1.35 per hour. The proportion of total compensation represented by retirement and savings ranged from 1.5 percent for service workers to 4.9 percent for natural resources, construction, and maintenance workers. (See table 5.)

Retirement and savings costs were higher, both in amount and as a proportion of total compensation for union workers (\$2.37 and 7.1 percent of total compensation) than for nonunion workers (71 cents and 3.1 percent of total compensation). Defined benefit plan costs were significantly higher for union workers (\$1.84 and 5.5 percent of compensation) than for nonunion workers (28 cents and 1.2 percent of compensation). (See table 5.)

Retirement and savings costs were higher in goods-producing industries (\$1.59 and 5.5 percent of total compensation) than in service-providing industries (71 cents and 3.1 percent of total compensation) per hour. Within goods-producing industries, construction averaged \$1.39 per hour and manufacturing, \$1.64. Costs in service-providing industries varied widely, ranging from 10 cents in leisure and hospitality to \$1.48 in financial activities. (See table 6.)

Among the four regions, retirement and savings costs ranged from 71 cents per hour in the South to \$1.00 in the Northeast. Retirement and savings costs were 96 cents in the Midwest and 97 cents in the West. Within the nine census divisions, retirement and savings costs ranged from 61 cents in the East South Central division to \$1.09 in the Pacific division. (See table 7.)

Retirement and savings costs in establishments with fewer than 50 workers averaged 47 cents (2.3 percent), significantly less than establishments with 500 workers or more, \$1.98 (5.7 percent). (See table 8.)

Relative importance of employer costs for employee compensation, June 2005

| Compensation component | Civilian workers | State and local government | Private industry |
|------------------------|---------------------|----------------------------|---------------------|

¹ Includes workers in the private nonfarm economy excluding households and the public sector excluding the Federal government. ² Includes mining, construction, and manufacturing. The

agriculture, forestry, farming, and hunting sector is excluded.

³ Includes utilities; wholesale trade; retail trade; transportation

and warehousing; information; finance and insurance; real estate and rental and leasing; professional and technical services; management of companies and enterprises; administrative and waste services; educational services; health care and social assistance; arts, entertainment and recreation; accommodation and food services; and other services, except public administration.

⁴ Includes premium pay for work in addition to the regular work schedule (such as overtime, weekends, and holidays).

⁵ Cost per hour worked is \$0.01 or less.

⁶ Less than .05 percent.

⁷ Comprises the Old-Age, Survivors, and Disability Insurance (OASDI) program.

8 Includes severance pay and supplemental unemployment

¹ This table presents data for the three major occupational groups in State and local government: management, professional, and related occupations, including teachers; sales and office occupations, including clerical workers; and service occupations, including police and firefighters.
² Service-providing industries, which include health and educational services, employ a large part of the State and local government workforce.
³ Includes premium pay for work in addition to the regular work schedule (such as overtime weekends, and holidays).

⁽such as overtime, weekends, and holidays).

⁴ Comprises the Old-Age, Survivors, and Disability Insurance (OASDI) program.

⁵ Cost per hour worked is \$0.01 or less.
6 Less than .05 percent.

⁷ Includes severance pay and supplemental unemployment benefits.

Includes severance pay and supplemental unemployment benefits.
 Cost per hour worked is \$0.01 or less.
 Less than .05 percent.

EXPLANATORY NOTE

Employer Costs for Employee Compensation (ECEC) measures the average cost per employee hour worked that employers pay for wages and salaries and benefits.

Wages and salaries are defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions and include production bonuses, incentive earnings, commission payments, and cost-of-living adjustments. Not included in straight-time earnings are nonproduction bonuses such as lump-sum payments provided in lieu of wage increases, shift differentials, and premium pay for overtime and for work on weekends and holidays; these payments are included in the benefits component.

Benefits include: Paid leave—vacations, holidays, sick leave, and other leave; supplemental pay—overtime and premium pay for work in addition to the regular work schedule (such as weekends and holidays), shift differentials, and nonproduction bonuses (such as referral bonuses and lump-sum payments provided in lieu of wage increases); insurance benefits—life, health, short-term disability, and long-term disability; retirement and savings benefits—defined benefit and defined contribution plans; legally required benefits—Social Security, Medicare, Federal and State unemployment insurance, and workers' compensation; and other benefits—severance pay and supplemental unemployment plans.

The Employer Costs for Employee Compensation includes data for the civilian economy, which includes data from both private industry and State and local government. Excluded from private industry are the self-employed and farm and private household workers. Federal government workers are excluded from the public sector. The private industry series and the State and local government series provide data for the two sectors separately.

The cost levels for this quarter were collected from a probability sample of about 41,000 occupations within approximately 9,500 sample establishments in private industry and about 3,500 occupations within approximately 800 sample establishments in State and local governments. Data are collected for the pay period including the 12th day of the survey months of March, June, September, and December.

Beginning with the March 2004 estimates, the ECEC percent of total compensation estimates are calculated from dollar aggregates and then rounded to the published level of precision. This change in method will provide the most precise estimates of the percent of total compensation; however, estimates of the percentage of total compensation calculated from the published cost estimates may differ slightly from those calculated from the unpublished dollar aggregates.

Sample establishments are classified by industry categories based on the 2002 North American Industry Classification (NAICS) system, as defined by the U.S. Office of Management and Budget. Within a sample establishment, specific job categories are selected and classified into about 800 occupational classifications according to the 2000 Standard Occupational Classification (SOC) system. Individual occupations are combined to represent one of ten intermediate aggregations such as professional and related occupations, or one of five higher-level aggregations such as management, professional, and related occupations. For more detailed information on NAICS and SOC, including background and definitions, see the BLS websites: http://www.bls.gov/bls/naics.htm and http://www.bls.gov/soc/home.htm.

Additional occupational and industrial series were introduced in March 2004 with the introduction of the NAICS and SOC definitions. Several publications have been prepared to provide more information on the transitions of the ECEC to NAICS and SOC, including a brief overview, a question-and-answer document, and a detailed overview on the differences in series due to the changes in industry and occupational classification

systems. In addition, an article on the transition, "Comparing Current and Former Industry and Occupational ECEC Series" is available on the e-journal, <u>Compensation and Working Conditions Online</u>, posted August 25, 2004, on the website http://www.bls.gov/opub/cwc/cm20040823ar01p1.htm. Information on the transition may be obtained by calling (202) 691-6199, sending an e-mail message to ocltinfo@bls.gov, or visiting the BLS website at http://www.bls.gov/ncs/ect/#notices.

Current employment weights are used to calculate cost levels. The June 2005 cost levels were calculated using the June 2005 employment counts from the Bureau of Labor Statistics Current Employment Statistics (CES) program, benchmarked to the March 2004 universe of all private nonfarm establishments. For more information on the CES updating of employment estimates, see "BLS Establishment Estimates Revised to Incorporate March 2004 Benchmarks" on the Internet site http://www.bls.gov/web/cesbmart.htm.

In most instances, private industry employment counts used in the ECEC were total employment estimates for 3-digit sub-sector industry groups, such as machinery manufacturing (NAICS 333) or gasoline stations (NAICS 447), as defined by the NAICS system. In a few cases, more detailed private industry employment counts were used. These include 4-digit educational establishments--elementary and secondary schools (6111), junior colleges (6112), and colleges and universities (6113)--as well as the 6-digit aircraft manufacturing industry (336411). For State and local governments, a more aggregated level was used reflecting the level of detailed published by the CES program. For both private and government establishments, the employment data were apportioned based on the sampling weights assigned to the Employment Cost Index (ECI) sample. For more information on NAICS coding, see "Recent changes in the national Current Employment Statistics survey" in the June 2003 issue of the Monthly Labor Review.

The ECI, which measures the change in employer costs for employee compensation, is calculated with fixed 1990 employment counts to prevent employment shifts among occupations and industries from influencing the changes. Therefore, year-to-year changes in Employer Costs for Employee Compensation will differ from those in the ECI.

Historical ECEC data, using the industry categories based on the 1987 Standard Industrial Classification System and classifying jobs into occupational classifications according to the Census of Population, are available from several sources. Data and related articles are included in the bulletin, Employee Compensation, 1986-99 (Bulletin 2508). An annual historical listing from March 1986 through March 2002 is also available on the Internet site http://www.bls.gov/ncs/ect/home.htm or upon request. Data on a quarterly basis from June 2002 through December 2003 is also available.

Beginning with the March 2004 quarter, historical data are available based on the 2002 North American Industry Classification System and the 2000 Standard Occupational Classification. The new historical tables are available on the Internet site http://www.bls.gov/ncs/ect/home.htm or upon request. Information on how costs are calculated appears in "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," Compensation and Working Conditions, Summer 1997. An article on changes in employer compensation costs, "Tracking Changes in Benefit Costs," appears in Compensation and Working Conditions, Spring 1999.

Relative Standard Errors

Because the ECEC is a sample survey, it is subject to sampling errors. Sampling errors are differences that occur between the results computed from a sample of observations and those computed from all observations in the population. The estimates derived from different samples selected using the same sample design may differ from one another. A measure of the variation among these differing estimates is the standard

error. It can be used to measure the precision with which an estimate from a particular sample approximates the expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey

differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error. All the statements of comparisons appearing in this publication are significant at a 1.6 standard error level or better, unless otherwise indicated. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference.

The relative standard error (RSE) for all estimates will be available shortly after the release is issued. This information can be obtained directly from the BLS Internet site http://www.bls.gov/ncs/ect/home.htm, by e-mail request to ocltinfo@bls.gov, or by telephone (202) 691-6199.

For a more detailed explanation of relative standard errors, see "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," <u>Compensation and Working Conditions</u>, Summer 1997. For a detailed explanation of how to use standard error data to analyze differences in year-to-year changes, see "Analyzing Year-to-Year Changes in Employer Costs for Employee Compensation," <u>Compensation and Working Conditions</u>, Spring 1998. This article supplements an article from the Summer 1997 issue of <u>Compensation and Working Conditions</u>, "Explaining the Differential Growth Rates of the ECI and ECEC," which examined how differences in the construction of these measures contribute to differing trends.

Standard errors relate to differences that occur from sampling errors, but not from nonsampling errors. Nonsampling errors are not measured and include survey nonresponse and data collection and processing errors. Survey nonresponse occurs when sample members are unwilling or unable to participate in the survey. Data collection errors include inaccurate data by respondents and definitional difficulties. Processing errors include errors in recording, coding, and entering data. Although nonsampling errors are not measured, BLS quality assurance programs contain procedures for reducing such errors. These procedures include data collection reinterviews, observed interviews, computer data edits, and systematic review of reports on which data are recorded. Extensive field economist training also is conducted to maintain high data collection standards.

Comparing private and public sector data

Aggregate compensation cost levels in State and local government should not be directly compared with those in private industry. Differences between these sectors stem from factors such as variation in work activities and occupational structures. Manufacturing and sales, for example, make up a large part of private industry work activities, but are rare in State and local government. Professional and administrative support occupations (including teachers) account for two-thirds of the State and local government workforce, compared with one-half of private industry.

A detailed examination of differences in compensation levels and trends between private industry and State and local government may be found in "Cost of Employee Compensation in Public and Private Sectors," <u>Monthly Labor Review</u>, May 1993, and "Compensation Cost Trends in Private Industry and State and Local Governments," Compensation and Working Conditions, Fall 1999.
