JOB OPENINGS AND LABOR TURNOVER: JANUARY 2006
The job openings, hires, and total separations rates were all unchanged in January, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This release includes estimates of the number and rate of job openings, hires, and separations for the total nonfarm sector by industry and geographic region. The annual turnover, or separations, rate rose to 41 percent in 2005, up from 37 percent in 2003.

## Job Openings

On the last business day of January 2006, there were 3.9 million job openings in the United States, and the job openings rate was 2.8 percent. (See table 1.) The job openings rate was unchanged in January but has generally trended upward since September 2003. In January, the job openings rate fell in construction. Rates did not change significantly in any geographic region.

## Revisions to Monthly JOLTS Data and First Publication of Annual Data

The job openings, hires, and separations data in this release have been revised to incorporate annual updates to the Current Employment Statistics employment estimates and the JOLTS seasonal adjustment factors. See page 4 for more information.

With this release, annual rates and levels for hires and separations from the JOLTS program are published for the first time. Data for the years 2001 through 2005 are presented in tables 11 through 20. See page 3 for more information.

Table A. Job openings, hires, and total separations by industry, seasonally adjusted

| Industry | Job openings |  |  | Hires |  |  | Total separations |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE: Data have been revised to incorporate the annual updates to the Current Employment Statistics employment estimates and the JOLTS seasonal adjustment factors. See the note on page 4 for more information.

## Hires and Separations

The hires rate was unchanged at 3.5 percent in January. (See table 2.) Hires are any additions to the payroll during the month. Over the month, the hires rate increased in manufacturing; trade, transportation, and utilities; and government. The hires rate did not change significantly in any region.

The total separations, or turnover, rate was unchanged at 3.2 percent in January. (See table 3.) Separations are terminations of employment that occur at any time during the month. In January, the total separations rate decreased in the trade, transportation, and utilities industry but increased in professional and business services and in government. The total separations rate did not change significantly in any region.

Total separations include quits (voluntary separations), layoffs and discharges (involuntary separations), and other separations (including retirements). The quits rate, which can serve as a barometer of workers' ability to change jobs, was little changed at 2.0 percent in January. (See table 4.) The quits rate fell in the trade, transportation, and utilities industry but increased in the professional and business services industry. The quits rate rose in the Midwest.

The other two components of total separations-layoffs and discharges, and other separations-are not seasonally adjusted. From January 2005 to January 2006, the layoffs and discharges rate fell to 1.2 percent, and the other separations rate rose to 0.3 percent. (See tables 9 and 10.)

Hires and separations data help show dynamic flows in the labor market. Over the last 12 months, hires have averaged 4.8 million per month and separations have averaged 4.5 million per month (not seasonally adjusted). The comparable figures a year earlier were 4.6 million hires and 4.4 million separations. (See the Technical Note for additional information on these measures.)

## Annual Levels and Rates

This release begins the publication of JOLTS annual rates and levels for hires, total separations, quits, layoffs and discharges, and other separations. (See tables 11 through 20.) These data series were developed in response to numerous requests by data users. Note that annual figures for job openings are not calculated because job openings are measured on a stock, or point-in-time, basis rather than on a flow basis over a specified time period. This first release includes annual data for the years 2001 through 2005. The annual figures and additional tables will be published with the release of January data each year. (See the Technical Note for additional information on these measures.)

Calculating annual levels and rates allows additional comparisons across years. In 2005, annual hires rose for the second year in a row, reaching 57 million after weaker hiring in 2002 and 2003. (See table 11.) Total separations rose to 55 million in 2005 , yielding an annual turnover rate of 41 percent. (See tables 13 and 14.) (The annual turnover rate is the number of total separations during the entire year as a percent of annual average employment.) The number of quits increased notably for the second year in a row, reaching 31 million in 2005, while the quits rate rose to 23 percent for the first time since 2001. (See tables 15 and 16.) In contrast, the levels of layoffs and discharges were relatively flat over the past several years at around 20 million per year, as was the level of other separations at about 3.7 million per year. (See tables 17 and 19.) The corresponding rates for these measures also have shown little change since 2001. (See tables 18 and 20.)

## For More Information

For additional information, please read the Technical Note or visit the JOLTS Web site at http://www. bls.gov/jlt/. Additional information about JOLTS also may be obtained by e-mailing Joltsinfo@bls.gov or by calling (202) 691-5870.

The Job Openings and Labor Turnover release for February 2006 is scheduled to be issued on Tuesday, April 11, 2006.

## Revisions to Job Openings and Labor Turnover Data

In accordance with annual practice, the Job Openings and Labor Turnover Survey (JOLTS) data have been revised to reflect annual updates to the Current Employment Statistics (CES), or establishment survey, employment estimates. The JOLTS employment levels (not published) are ratio-adjusted to the CES employment levels, and the resulting ratios are applied to all JOLTS data elements. This annual benchmark process resulted in revisions to all not seasonally adjusted JOLTS data series from April 2004 forward, the time period since the last benchmark was established. Additionally, the seasonally adjusted JOLTS data series have been recalculated from December 2000 forward to reflect updated seasonal adjustment factors.

Table B presents revisions to seasonally adjusted job openings data for April 2004 forward, while table C presents revisions to hires data, table D presents revisions to total separations data, and table E presents revisions to quits data. All revised historical seasonally adjusted and not seasonally adjusted JOLTS data can be accessed through the JOLTS homepage at http://www.bls.gov/jlt/.

Further information on the revisions released today may be obtained by calling 202-691-5870 or via the Internet on the JOLTS homepage.

## Technical Note

The data for the Job Openings and Labor Turnover Survey (JOLTS) are collected and compiled monthly from a sample of business establishments by the Bureau of Labor Statistics (BLS).

## Collection

Each month, data are collected in a survey of business establishments for total employment, job openings, hires, quits, layoffs and discharges, and other separations. Data collection methods include computer-assisted telephone interviewing, touchtone data entry, fax, and mail.

## Coverage

The JOLTS program covers all private nonfarm establishments such as factories, offices, and stores, as well as federal, state, and local government entities in the 50 states and the District of Columbia.

## Concepts

Industry classification. The industry classifications in this release are in accordance with the 2002 version of the North American Industry Classification System (NAICS). In order to ensure the highest possible quality of data, State Workforce Agencies verify with employers and update, if necessary, the industry code, location, and ownership classification of all establishments on a 3-year cycle. Changes in establishment characteristics resulting from the verification process are always introduced into the JOLTS sampling frame with the data reported for the first month of the year.

Employment. Employment includes persons on the payroll who worked or received pay for the pay period that includes the 12th day of the reference month. Full-time, part-time, permanent, short-term, seasonal, salaried, and hourly employees are included, as are employees on paid vacations or other paid leave. Proprietors or partners of unincorporated businesses, unpaid family workers, or persons on leave without pay or on strike for the entire pay period, are not counted as employed. Employees of temporary help agencies, employee leasing companies, outside contractors, and consultants are counted by their employer of record, not by the establishment where they are working.

Job openings. Establishments submit job openings information for the last business day of the reference month. A job opening requires that: 1) a specific position exists and there is work available for that position, 2) work could start within 30 days regardless of whether a suitable candidate is found, and 3 ) the employer is actively recruiting from outside the establishment to fill the position. Included are full-time, part-time, permanent, short-term, and seasonal openings. Active recruiting means that the establishment is taking steps to fill a position by advertising in newspapers or on the Internet, posting help-wanted signs, accepting applications, or using other similar methods.

Jobs to be filled only by internal transfers, promotions, demotions, or recall from layoffs are excluded. Also excluded
are jobs with start dates more than 30 days in the future, jobs for which employees have been hired but have not yet reported for work, and jobs to be filled by employees of temporary help agencies, employee leasing companies, outside contractors, or consultants. The job openings rate is computed by dividing the number of job openings by the sum of employment and job openings and multiplying that quotient by 100 .

Hires. Hires are the total number of additions to the payroll occurring at any time during the reference month, including both new and rehired employees, full-time and part-time, permanent, short-term, and seasonal employees, employees recalled to the location after a layoff lasting more than 7 days, on-call or intermittent employees who returned to work after having been formally separated, and transfers from other locations. The hires count does not include transfers or promotions within the reporting site, employees returning from strike, employees of temporary help agencies or employee leasing companies, outside contractors, or consultants. The hires rate is computed by dividing the number of hires by employment and multiplying that quotient by 100 .

Separations. Separations are the total number of terminations of employment occurring at any time during the reference month, and are reported by type of separationquits, layoffs and discharges, and other separations. Quits are voluntary separations by employees (except for retirements, which are reported as other separations). Layoffs and discharges are involuntary separations initiated by the employer and include layoffs with no intent to rehire, formal layoffs lasting or expected to last more than 7 days, discharges resulting from mergers, downsizing, or closings, firings or other discharges for cause, terminations of permanent or short-term employees, and terminations of seasonal employees. Other separations include retirements, transfers to other locations, deaths, and separations due to disability. Separations do not include transfers within the same location or employees on strike.

The separations rate is computed by dividing the number of separations by employment and multiplying that quotient by 100. The quits, layoffs and discharges, and other separations rates are computed similarly, dividing the number by employment and multiplying by 100.

Annual estimates. Annual estimates of rates and levels of hires, quits, layoffs and discharges, other separations, and total separations are released with the January news release each year.

The JOLTS annual level estimates for hires, quits, layoffs and discharges, other separations, and total separations are the sum of the 12 published monthly levels. The annual rate estimates are computed by dividing the annual level by the Current Employment Statistics (CES) annual average employment level, and multiplying that quotient by 100. This figure will be approximately equal to the sum of the 12 monthly rates. Note that both the JOLTS and CES annual levels are rounded to the nearest thousand before the annual estimates are calculated. Consistent with BLS practices, annual estimates will be published only for not seasonally adjusted data.

Annual estimates are not calculated for job openings because job openings are a stock, or point-in-time, measurement for the last business day of each month. Only jobs still open on the last day of the month are counted. For the same reason job openings cannot be cumulated throughout each month, annual figures for job openings cannot be created by summing the monthly estimates. Hires and separations are flow measures and are cumulated over the month with a total reported for the month. Therefore, the annual figures can be created by summing the monthly estimates.

## Sample methodology

The JOLTS sample design is a random sample of 16,000 nonfarm business establishments, including factories, offices, and stores, as well as federal, state, and local governments in the 50 states and the District of Columbia. The establishments are drawn from a universe of over eight million establishments compiled as part of the operations of the Quarterly Census of Employment and Wages, or QCEW, program. This program includes all employers subject to state Unemployment Insurance (UI) laws and federal agencies subject to Unemployment Compensation for Federal Employees (UCFE).

The sampling frame is stratified by ownership, region, industry sector, and size class. Large firms fall into the sample with virtual certainty. JOLTS total employment estimates are controlled to the employment estimates of the Current Employment Statistics (CES) survey. A ratio of CES to JOLTS employment is used to adjust the levels for all other JOLTS data elements. Rates are then computed from the adjusted levels.

## Using JOLTS data

The JOLTS data series on job openings, hires, and separations are relatively new. The full sample is divided into panels, with one panel enrolled each month. A full complement of panels for the original data series based on the 1987 Standard Industrial Classification (SIC) system was not completely enrolled in the survey until January 2002. The supplemental panels of establishments needed to create NAICS estimates were not completely enrolled until May 2003. The data collected up until those points are from less than a full sample. Therefore, estimates from earlier months should be used with caution, as fewer sampled units were reporting data at that time.

In March 2002, BLS procedures for collecting hires and separations data were revised to address possible underreporting. As a result, JOLTS hires and separations estimates for months prior to March 2002 may not be comparable with estimates for March 2002 and later.

The federal government reorganization that involved transferring approximately 180,000 employees to the new Department of Homeland Security is not reflected in the JOLTS hires and separations estimates for the federal government. The Office of Personnel Management's record shows these transfers were completed in March 2003. The inclusion of
transfers in the JOLTS definitions of hires and separations is intended to cover ongoing movements of workers between establishments. The Department of Homeland Security reorganization was a massive one-time event, and the inclusion of these intergovernmental transfers would distort the federal government time series.

## Seasonal adjustment

BLS seasonally adjusts several JOLTS series using the X-12-ARIMA seasonal adjustment program. Seasonal adjustment is the process of estimating and removing periodic fluctuations caused by events such as weather, holidays, and the beginning and ending of the school year. Seasonal adjustment makes it easier to observe fundamental changes in the level of the series, particularly those associated with general economic expansions and contractions. A concurrent seasonal adjustment methodology is used in which new seasonal adjustment factors are calculated each month, using all relevant data, up to and including the data for the current month.

Data users should note that seasonal adjustment of the JOLTS series is conducted with fewer data observations than is customary. The historical data, therefore, may be subject to larger than normal revisions. Since the seasonal patterns in economic data series typically emerge over time, the standard use of moving averages as seasonal filters to capture these effects requires longer series than are currently available. As a result, the stable seasonal filter option is used in the seasonal adjustment of the JOLTS data. When calculating seasonal factors, this filter takes an average for each calendar month after detrending the series. The stable seasonal filter assumes that the seasonal factors are fixed; a necessary assumption until sufficient data are available. When the stable seasonal filter is no longer needed, other program features also may be introduced, such as outlier adjustment and extended diagnostic testing. Additionally, it is expected that more series, such as layoffs and discharges and additional industries, may be seasonally adjusted when more data are available.

## Reliability of the estimates

JOLTS estimates are subject to both sampling and nonsampling error. When a sample rather than the entire population is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. BLS analysis is generally conducted at the 90-percent level of confidence. That means that there is a 90 -percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. Estimates of sampling errors are available upon request.

The JOLTS estimates also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to include a segment of the population, the inability to obtain data from all units in the sample, the inability or unwillingness of respondents to provide data on a timely basis, mistakes made by respondents, errors made in the collection or processing of the data, and errors from the employment benchmark data used in estimation.

JOLTS hires and separations estimates cannot be used to exactly explain net changes in nonfarm payroll employment. Some reasons why it is problematic to compare changes in payroll employment with JOLTS hires and separations, especially on a monthly basis, are: 1) the reference period for payroll employment is the pay period including the 12 th of the
month, while the reference period for hires and separations is the calendar month; and 2) payroll employment can vary from month to month simply because part-time and on-call workers may not always work during the pay period that includes the 12th of the month. Additionally, research has found that some reporters systematically underreport separations relative to hires due to a number of factors, including the nature of their payroll systems and practices. The shortfall appears to be about 2 percent or less over a 12-month period.

## Other information

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone: 1-800-877-8339.

[^13]
[^0]:    ${ }^{1}$ Quits are the number of quits during the entire month.
    ${ }^{2}$ The quits rate is the number of quits during the entire month as a percent of total employment.
    ${ }^{3}$ Detail will not necessarily add to totals because of the independent seasonal adjustment of the various series.
    ${ }^{4}$ Includes natural resources and mining, information, financial activities, and other services, not shown separately.
    ${ }^{5}$ See footnote 5, table 1.
    ${ }^{\mathrm{p}}=$ preliminary.
    NOTE: Data have been revised to incorporate the annual updates to the Current Employment Statistics employment estimates and the JOLTS seasonal adjustment factors.

[^1]:    ${ }^{1}$ Quits are the number of quits during the entire month.
    ${ }^{2}$ The quits rate is the number of quits during the entire month as a percent of total employment.
    ${ }^{3}$ See footnote 5, table 1.
    ${ }^{p}=$ preliminary.
    NOTE: Data have been revised to incorporate the annual updates to the Current Employment Statistics employment estimates.

[^2]:    ${ }^{1}$ Layoffs and discharges are the number of layoffs and discharges during the entire month.
    ${ }^{2}$ The layoffs and discharges rate is the number of layoffs and discharges during the entire month as a percent of total employment.
    ${ }^{3}$ See footnote 5 , table 1.
    ${ }^{p}=$ preliminary.
    NOTE: Data have been revised to incorporate the annual updates to the Current Employment Statistics employment estimates.

[^3]:    ${ }^{1}$ Other separations are the number of other separations during the entire month.
    ${ }^{2}$ The other separations rate is the number of other separations during the entire month as a percent of total employment.
    ${ }^{3}$ See footnote 5 , table 1 .
    ${ }^{p}=$ preliminary.

[^4]:    ${ }^{1}$ The annual hires level is the total number of hires during the entire year.
    ${ }^{2}$ See footnote 5 , table 1.

[^5]:    ${ }^{1}$ The annual hires rate is the number of hires during the entire year as a percent of annual average employment.
    ${ }^{2}$ See footnote 5 , table 1.

[^6]:    ${ }^{1}$ The annual total separations level is the total number of total separations during the entire year.
    ${ }^{2}$ See footnote 5, table 1.

[^7]:    ${ }^{1}$ The annual total separations rate is the number of total separations during the entire year as a percent of annual average employment.
    ${ }^{2}$ See footnote 5, table 1.

[^8]:    ${ }^{1}$ The annual quits level is the total number of quits during the entire year.
    ${ }^{2}$ See footnote 5, table 1.

[^9]:    ${ }^{1}$ The annual quits rate is the number of quits during the entire year as a percent of annual average employment.
    ${ }^{2}$ See footnote 5, table 1.

[^10]:    ${ }^{1}$ The annual layoffs and discharges level is the total number of layoffs and discharges during the entire year.
    ${ }^{2}$ See footnote 5, table 1.

[^11]:    ${ }^{1}$ The annual layoffs and discharges rate is the number of layoffs and discharges during the entire year as a percent of annual average employment.
    ${ }^{2}$ See footnote 5, table 1.

[^12]:    ${ }^{1}$ The annual other separations level is the total number of other separations during the entire year.
    ${ }^{2}$ See footnote 5, table 1.

[^13]:    ${ }^{1}$ The annual other separations rate is the number of other separations during the entire year as a percent of annual average employment.
    ${ }^{2}$ See footnote 5 , table 1 .
