Unemployment: (202) 691-6392 • lausinfo@bls.gov • www.bls.gov/lau

Media contact: (202) 691-5902 • PressOffice@bls.gov

METROPOLITAN AREA EMPLOYMENT AND UNEMPLOYMENT — JULY 2015

Unemployment rates were lower in July than a year earlier in 359 of the 387 metropolitan areas, higher in 20 areas, and unchanged in 8 areas, the U.S. Bureau of Labor Statistics reported today. Six areas had jobless rates of less than 3.0 percent and five areas had rates of at least 10.0 percent. Nonfarm payroll employment increased over the year in 322 metropolitan areas, decreased in 54 areas, and was unchanged in 11 areas. The national unemployment rate in July was 5.6 percent, not seasonally adjusted, down from 6.5 percent a year earlier.

Metropolitan Area Unemployment (Not Seasonally Adjusted)

Bismarck, N.D., had the lowest unemployment rate in July, 2.3 percent. Yuma, Ariz., and El Centro, Calif., had the highest unemployment rates, 26.6 percent and 24.2 percent, respectively. A total of 187 areas had July unemployment rates below the U.S. figure of 5.6 percent, 185 areas had rates above it, and 15 areas had rates equal to that of the nation. (See table 1 and the map.)

El Centro, Calif., had the largest over-the-year unemployment rate decrease in July (-3.9 percentage points). Seventeen other areas had rate declines of at least 2.0 percentage points. Morgantown, W.Va., had the largest over-the-year jobless rate increase (+1.2 percentage points).

Of the 51 metropolitan areas with a 2010 Census population of 1 million or more, Austin-Round Rock, Texas, had the lowest unemployment rate in July, 3.5 percent. Riverside-San Bernardino-Ontario, Calif., had the highest jobless rate among the large areas, 7.1 percent. All 51 large areas had over-the-year unemployment rate decreases, the largest of which occurred in Detroit-Warren-Dearborn, Mich. (-2.9 percentage points).

Metropolitan Division Unemployment (Not Seasonally Adjusted)

Eleven of the most populous metropolitan areas are made up of 38 metropolitan divisions, which are essentially separately identifiable employment centers. In July, San Francisco-Redwood City-South San Francisco, Calif., and San Rafael, Calif., had the lowest unemployment rates among the divisions, 3.7 percent each. Detroit-Dearborn-Livonia, Mich., had the highest division unemployment rate, 8.2 percent. (See table 2.)

All 38 metropolitan divisions had over-the-year unemployment rate decreases in July. The largest decline occurred in Detroit-Dearborn-Livonia, Mich. (-3.5 percentage points).

Metropolitan Area Nonfarm Employment (Not Seasonally Adjusted)

In July, 322 metropolitan areas had over-the-year increases in nonfarm payroll employment, 54 had decreases, and 11 had no change. The largest over-the-year employment increases occurred in New York-Newark-Jersey City, N.Y.-N.J.-Pa. (+164,400), Los Angeles-Long Beach-Anaheim, Calif. (+157,500), and Dallas-Fort Worth-Arlington, Texas (+121,700). The largest over-the-year percentage gain in employment occurred in Provo-Orem, Utah (+7.2 percent), followed by San Jose-Sunnyvale-Santa Clara, Calif. (+6.2 percent), and Lake Charles, La. (+5.8 percent). (See table 3.)

The largest over-the-year decreases in employment occurred in New Orleans-Metairie, La. (-3,800), Davenport-Moline-Rock Island, Iowa-Ill. (-3,600), and Barnstable Town, Mass. (-3,000). The largest over-the-year percentage decreases in employment occurred in Pine Bluff, Ark. (-5.8 percent), Barnstable Town, Mass. (-2.6 percent), and Florence-Muscle Shoals, Ala., and Lawton, Okla. (-2.0 percent each).

Over the year, nonfarm employment rose in 50 of the 51 metropolitan areas with a 2010 Census population of 1 million or more. The largest over-the-year percentage increase in employment in these large metropolitan areas occurred in San Jose-Sunnyvale-Santa Clara, Calif. (+6.2 percent), followed by Salt Lake City, Utah (+4.4 percent), and Orlando-Kissimmee-Sanford, Fla. (+4.1 percent). The only large metropolitan area that had an over-the-year percentage decrease was New Orleans-Metairie, La. (-0.7 percent).

Metropolitan Division Nonfarm Employment (Not Seasonally Adjusted)

In July, nonfarm payroll employment increased in 37 of the 38 metropolitan divisions over the year. The largest over-the-year increase in employment among the metropolitan divisions occurred in New York-Jersey City-White Plains, N.Y.-N.J. (+135,400), followed by Los Angeles-Long Beach-Glendale, Calif. (+107,900), and Dallas-Plano-Irving, Texas (+94,300). The only over-the-year decrease occurred in Nashua, N.H.-Mass. (-1,400). (See table 4.)

The largest over-the-year percentage increase in employment among the metropolitan divisions occurred in Tacoma-Lakewood, Wash. (+5.0 percent), followed by San Francisco-Redwood City-South San Francisco, Calif. (+4.4 percent), and Dallas-Plano-Irving, Texas (+4.1 percent). The only over-the-year percentage decrease in employment occurred in Nashua, N.H.-Mass. (-1.1 percent).

The Regional and State Employment and Unemployment news release for August is scheduled to be released on Friday, September 18, 2015, at 10:00 a.m. (EDT). The Metropolitan Area Employment and Unemployment news release for August is scheduled to be released on Wednesday, September 30, 2015, at 10:00 a.m. (EDT).

Technical Note

This release presents labor force and unemployment data from the Local Area Unemployment Statistics (LAUS) program (tables 1 and 2) for 387 metropolitan statistical areas and metropolitan New England City and Town Areas (NECTAs), plus 7 areas in Puerto Rico. Estimates for 38 metropolitan and NECTA divisions also are presented. Nonfarm payroll employment estimates from the Current Employment Statistics (CES) program (tables 3 and 4) are provided for the same areas. State estimates were previously published in the news release, *Regional and State Employment and Unemployment*, and are republished in this release for ease of reference. The LAUS and CES programs are both federal-state cooperative endeavors.

Labor force and unemployment—from the LAUS program

Definitions. The labor force and unemployment data are based on the same concepts and definitions as those used for the official national estimates obtained from the Current Population Survey (CPS), a sample survey of households that is conducted for the Bureau of Labor Statistics (BLS) by the U.S. Census Bureau. The LAUS program measures employment and unemployment on a place-of-residence basis. The universe for each is the civilian noninstitutional population 16 years of age and older. *Employed* persons are those who did any work at all for pay or profit in the reference week (the week including the 12th of the month) or worked 15 hours or more without pay in a family business or farm, plus those not working who had a job from which they were temporarily absent, whether or not paid, for such reasons as labor-management dispute, illness, or vacation. *Unemployed* persons are those who were not employed during the reference week (based on the definition above), had actively looked for a job sometime in the 4-week period ending with the reference week, and were currently available for work; persons on layoff expecting recall need not be looking for work to be counted as unemployed. The *labor force* is the sum of employed and unemployed persons. The *unemployment rate* is the number of unemployed as a percent of the labor force.

Method of estimation. Estimates for states, the District of Columbia, the Los Angeles-Long Beach-Glendale metropolitan division, and New York City are produced using time-series models with real-time benchmarking to national CPS totals. Model-based estimates are also produced for the following areas and their respective balances: the Chicago-Naperville-Arlington Heights, IL Metropolitan Division; Cleveland-Elyria, OH Metropolitan Statistical Area; Detroit-Warren-Dearborn, MI Metropolitan Statistical Area; Miami-Miami Beach-Kendall, FL Metropolitan Division; and Seattle-Bellevue-Everett, WA Metropolitan Division. Modeling improves the statistical basis of the estimation for these areas and provides important tools for analysis, such as measures of errors and seasonally adjusted series. For all other substate areas in this release, estimates are prepared through indirect

estimation procedures using a building-block approach. Employment estimates, which are based largely on “place of work” estimates from the CES program, are adjusted to refer to place of residence as used in the CPS. Unemployment estimates are aggregates of persons previously employed in industries covered by state unemployment insurance (UI) laws and entrants to the labor force data from the CPS. The substate estimates of employment and unemployment, which geographically exhaust the entire state, are adjusted proportionally to ensure that they add to the independently estimated state or balance-of-state totals. A detailed description of the estimation procedures is available from BLS upon request.

Annual revisions. Labor force and unemployment data shown for the prior year reflect adjustments made at the beginning of each year, usually implemented with the issuance of January estimates. The adjusted model-based estimates typically reflect updated population data from the U.S. Census Bureau, any revisions in other input data sources, and model re-estimation. All substate estimates then are re-estimated using updated inputs and adjusted to add to the revised model-based totals. In early 2015, a new generation of time-series models was implemented, resulting in the replacement of data back to the series beginnings. At the same time, enhancements were made to the substate estimation methodology, and more timely inputs from the American Community Survey were incorporated.

Employment—from the CES program

Definitions. Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period that includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2012 version of the North American Industry Classification System.

Method of estimation. CES State and Area employment data are produced using several estimation procedures. Where possible these data are produced using a “weighted link relative” estimation technique in which a ratio of current-month weighted employment to that of the previous-month weighted employment is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are then obtained by multiplying these ratios by the previous month’s employment estimates. The weighted link relative technique is utilized for data series where the sample size meets certain statistical criteria.

For some employment series, the sample of establishments is very small or highly variable. In these cases, a model-based approach is used in estimation. These models use the direct sample estimates (described above), combined

with forecasts of historical (benchmarked) data to decrease volatility in estimation. Two different models (Fay-Herriot Model and Small Domain Model) are used depending on the industry level being estimated. For more detailed information about each model, refer to the BLS Handbook of Methods.

Annual revisions. Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports that are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

Seasonal adjustment. Payroll employment data are seasonally adjusted for states, metropolitan areas, and metropolitan divisions at the total nonfarm level. For states, data are seasonally adjusted at the supersector level as well. Revisions of historical data for the most recent 5 years are made once a year, coincident with annual benchmark adjustments.

Reliability of the estimates

The estimates presented in this release are based on sample surveys, administrative data, and modeling and, thus, are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data also are subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the specific estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding. Unemployment rates are computed from unrounded data and thus may differ slightly from rates computed using the rounded data displayed in the tables.

Labor force and unemployment estimates. Measures of sampling error are not available for metropolitan areas or metropolitan divisions. Model-based error measures for states are available on the BLS website at www.bls.gov/lau/lastderr.htm. Measures of nonsampling error are not available for the areas contained in this release. Information on recent data revisions for states and local areas is available online at www.bls.gov/lau/launews1.htm.

Employment estimates. Measures of sampling error are available for metropolitan areas or metropolitan divisions upon request. Measures of sampling error for states down to the supersector level are available on the BLS website at www.bls.gov/sae/790stderr.htm. Measures of nonsampling error are not available for the areas contained in this release. Information on recent benchmark revisions is available online at www.bls.gov/sae/.

Area definitions

The substate area data published in this release reflect the delineations issued by the U.S. Office of Management and Budget on February 28, 2013. Data reflect New England City and Town Area (NECTA) definitions, rather than county-based definitions, in the six New England States. A detailed list of the geographic definitions is available online at www.bls.gov/lau/lausmsa.htm.

Additional information

Estimates of unadjusted and seasonally adjusted labor force and unemployment data for states, census regions and divisions, and seven substate areas are available in the news release *Regional and State Employment and Unemployment*. Estimates of labor force and unemployment for all states, metropolitan areas, counties, cities with a population of 25,000 or more, and other areas used in the administration of various federal economic assistance programs are available on the Internet at www.bls.gov/lau/. Employment data from the CES program are available on the BLS website at www.bls.gov/sae/.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

¹ For operational reasons, these interstate areas are listed under the state that accounts for the larger share of the population, different from the one that contains the first principal city.

² The area boundary does not reflect the Office of Management and Budget delineation.

^P = preliminary.

NOTE: Data refer to place of residence. Data for Puerto Rico are derived from a monthly household survey similar to the Current Population Survey. Area

delineations are based on Office of Management and Budget Bulletin No. 13-01, dated February 28, 2013, and are available on the BLS website at www.bls.gov/lau/lausmsa.htm. Areas in the six New England states are Metropolitan New England City and Town Areas (NECTAs), while areas in other states are county-based. Some metropolitan areas lie in two or more states. They are listed under the state containing the first principal city, unless otherwise footnoted. Estimates for the latest month are subject to revision the following month.

¹ These 11 areas contain all of the 38 metropolitan divisions.

² Part of the area (or division) is in one or more adjacent states.

³ All of the division is in one or more adjacent states.

P = preliminary.

NOTE: Data refer to place of residence. Area delineations are based on Office of Management and Budget Bulletin No. 13-01, dated February 28, 2013, and are available on the BLS website at www.bls.gov/lau/lausmsa.htm. Areas in the six New England states are Metropolitan New England

City and Town Areas (NECTAs), while areas in other states are county-based. Some metropolitan areas lie in two or more states. They are listed under the state containing the first principal city. Metropolitan divisions are listed under their metropolitan areas. Some divisions lie in more than one state, and some, like Camden, N.J., are totally outside the states under which their metropolitan areas are listed. For Washington-Arlington-Alexandria, D.C.-Va.-Md.-W.Va., the metropolitan area and division titles are identical. Estimates for the latest month are subject to revision the following month.

¹ For operational reasons, these interstate areas are listed under the state that accounts for the larger share of the population, which is different from the state that contains the first principal city.

² Area boundary does not reflect the official OMB delineation.

p Preliminary

NOTE: Data are counts of jobs by place of work. Estimates subsequent to the current benchmark are preliminary and will be revised when new information becomes available. Area delineations are based on Office of Management and Budget Bulletin No. 13-01, dated February 28, 2013, and are available on the BLS website at www.bls.gov/lau/lausmsa.htm. Areas in the six New England states are Metropolitan New England City and Town Areas (NECTAs), while areas in other states are county-based. Some metropolitan areas lie in two or more states. They are listed under the state containing the first principal city, unless otherwise footnoted. Estimates for the latest month are subject to revision the following month.

¹ These 11 areas contain all of the 38 metropolitan divisions.

² Part of the area (or division) is in one or more adjacent states.

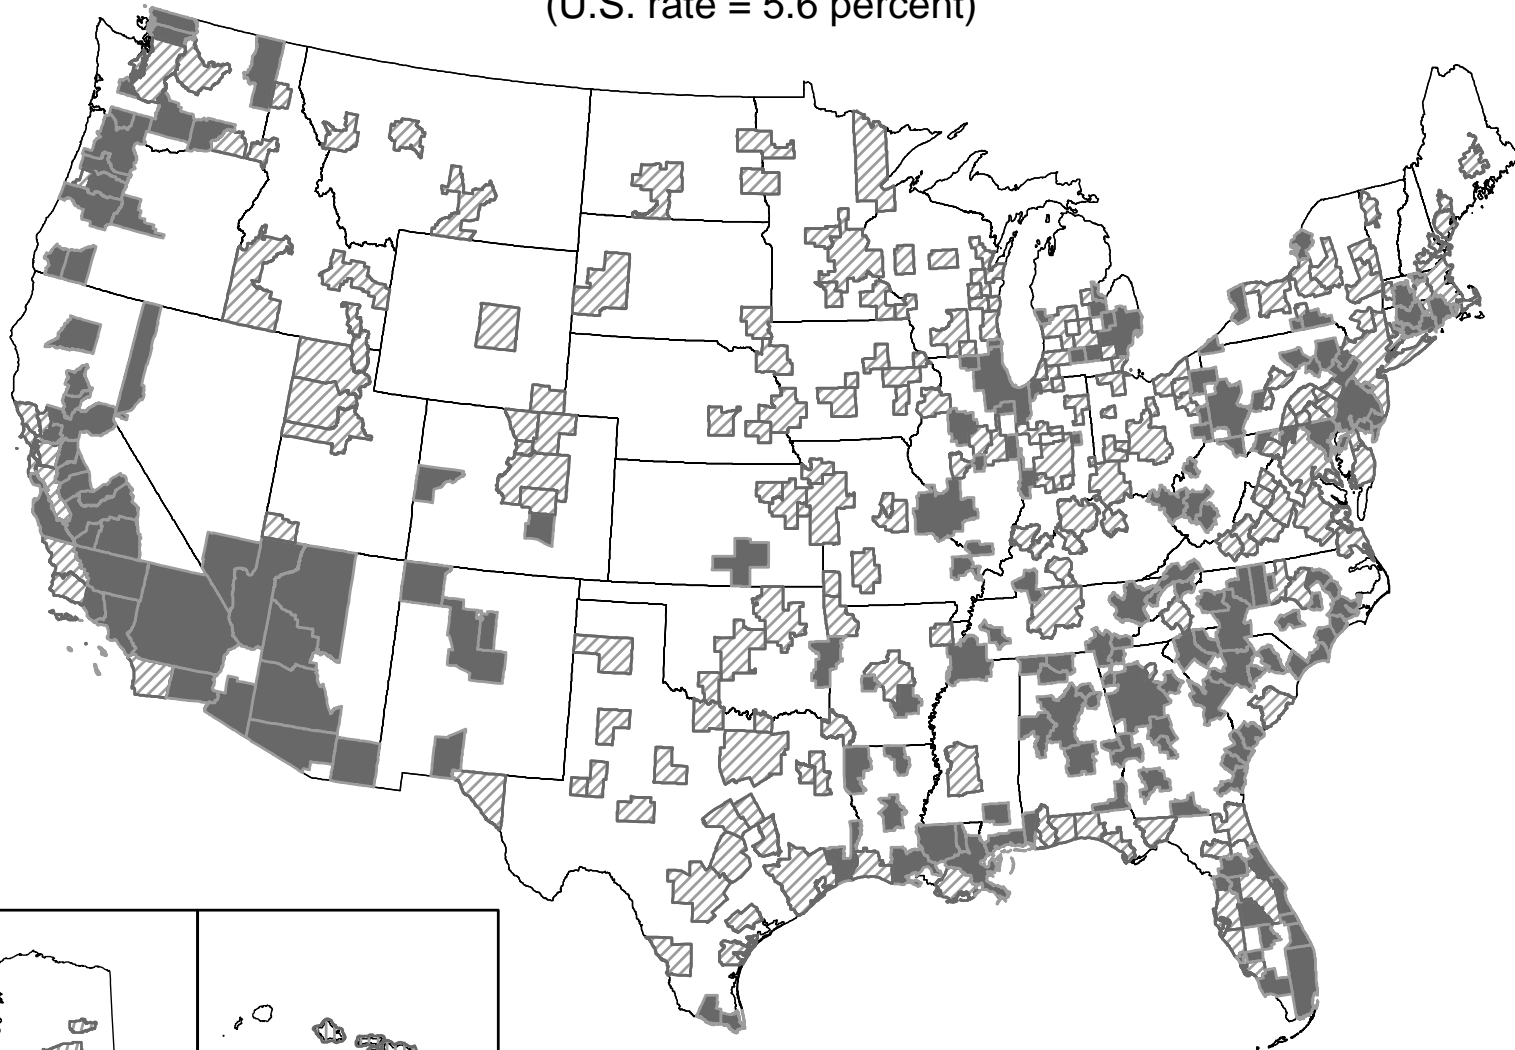

³ All of the division is in one or more adjacent states.

^p Preliminary

NOTE: Data are counts of jobs by place of work. Estimates subsequent to the current benchmark are preliminary and will be revised when new information becomes available. Area definitions are based on Office of Management and Budget Bulletin No. 13-01, dated February 28, 2013, and available at www.bls.gov/lau/lausmsa.htm. Areas in the six New England states are Metropolitan New England City and Town Areas (NECTAs), while areas in other states are county-based. Some metropolitan areas lie in two or more states. They are listed under the state containing the first principal city. Metropolitan divisions are listed under their metropolitan areas. Some divisions lie in more than one state, and some, like Camden, N.J., are totally outside the states under which their metropolitan areas are listed. For Washington-Arlington-Alexandria, D.C.-Va.-Md.-W.Va., the metropolitan area and division titles are identical. Estimates for the latest month are subject to revision the following month.

Unemployment rates for metropolitan areas, not seasonally adjusted, July 2015

(U.S. rate = 5.6 percent)

NOTE: Map includes data for 387 metropolitan areas based on Office of Management and Budget Bulletin No. 13-01. Areas in the six New England states are Metropolitan New England City and Town areas (NECTAs), while areas in other states are county-based.
