## Mass Layoffs - August 2011

Employers took 1,587 mass layoff actions in August involving 165,547 workers, seasonally adjusted, as measured by new filings for unemployment insurance benefits during the month, the U.S. Bureau of Labor Statistics reported today. Each mass layoff involved at least 50 workers from a single employer. The number of mass layoff events in August increased by 8 from July, and the number of associated initial claims increased by 20,547. In August, 391 mass layoff events were reported in the manufacturing sector, seasonally adjusted, resulting in 48,997 initial claims. (See table 1.)

The national unemployment rate was 9.1 percent in August, unchanged from the prior month but down from 9.6 percent a year earlier. In August, total nonfarm payroll employment was unchanged from the prior month at 131.1 million and increased over the year by 1.3 million.

## Industry Distribution (Not Seasonally Adjusted)

The number of mass layoff events in August was 961, not seasonally adjusted, resulting in 99,213 initial claims for unemployment insurance. Mass layoff events decreased by 15 from August 2010, while associated initial claims increased by 6,778 . (See table 2.) Nine of the 19 major industry sectors in the private economy reported over-the-year increases in initial claims, with the largest increases occurring in information and manufacturing. The six-digit industry with the largest number of initial claims in August 2011 was wired telecommunications carriers. (See table A. The table includes both publicly and privately owned entities.)

Table A. Industries with the largest number of mass layoff initial claims in August 2011, not seasonally adjusted

| Industry | Initial claims | August peak |  |
| :---: | :---: | :---: | :---: |
|  |  | Year | Initial claims |
| Wired telecommunications carriers | 15,014 | 2011 | 15,014 |
| Temporary help services ${ }^{1}$ | 8,557 | 1999 | 11,533 |
| School and employee bus transportation | 5,359 | 2003 | 6,538 |
| Motion picture and video production.. | 2,027 | 2003 | 6,812 |
| Food service contractors | 1,868 | 2011 | 1,868 |
| Automobile manufacturing. | 1,820 | 2001 | 8,166 |
| Lawn and garden equipment manufacturing | $\mathrm{r}^{2}$ ) | 2011 | $\mathrm{r}^{2}$ ) |
| Professional employer organizations ${ }^{1}$ | 1,504 | 2008 | 5,252 |
| Household refrigerator and home freezer mfg. | 1,482 | 2011 | 1,482 |
| Warehouse clubs and supercenters ... | 1,431 | 2009 | 1,552 |

${ }^{1}$ See the Technical Note for more information on these industries.
${ }^{2}$ Data do not meet BLS or state agency disclosure standards.
The manufacturing sector accounted for 24 percent of all mass layoff events and 27 percent of initial claims filed in August. A year earlier, manufacturing made up 24 percent of events and 25 percent of initial claims. Within this sector, the number of claimants in August 2011 was greatest in the transportation equipment subsector. Eleven of the 21 manufacturing subsectors experienced over-theyear increases in initial claims, with the largest increase occurring in machinery. (See table 3.)

## Geographic Distribution (Not Seasonally Adjusted)

Three of the 4 regions and 8 of the 9 divisions experienced over-the-year increases in initial claims for unemployment insurance due to mass layoffs in August. Among the census regions, the Northeast registered the largest over-the-year increase in initial claims. Of the geographic divisions, the Middle Atlantic had the largest over-the-year increase in initial claims. (See table 5.)

California recorded the highest number of mass layoff initial claims in August, followed by Pennsylvania, New York, New Jersey, and Massachusetts. Thirty states and the District of Columbia experienced over-the-year increases in initial claims, led by Massachusetts and New Jersey. (See table 6.)

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. For private nonfarm establishments, information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 4.) See the Technical Note for more detailed definitions.

The Mass Layoffs news release for September is scheduled to be released on Tuesday, October 25, 2011, at 10:00 a.m. (EDT).

## Upcoming Changes to the Mass Layoffs News Release

The following changes will be introduced in the October 2011 mass layoffs news release scheduled to be released on Tuesday, November 22, 2011.

- Charts 1 and 2 will be replaced with a single chart showing 10 years of mass layoff initial claims data.
- Table A will only show private nonfarm industries.
- Seasonally adjusted data will be removed from Table 3 since these data are shown in Table 1. Select three-digit industry detail will be added to several two-digit industries. Public education industry detail will be displayed within the state and local government sections of Table 3. The previous two months' data will be removed; the current month and the previous year's data will be shown.
- Table 4 will be removed from the monthly release and issued as a supplemental table to the quarterly release. Table 5 and Table 6 will be combined to create a new Table 4. The geographic divisions shown in Table 5 will be removed, and the states will be grouped into their respective Census regions. The previous two months’ data will be removed; the current month and previous year's data will be shown.
- The new Tables 3 and 4 will include average weekly mass layoff events and average weekly initial claims for the current month and previous year. See the Technical Note for a description of average weekly analysis.

## Technical Note

The Mass Layoff Statistics (MLS) program is a federalstate program that uses a standardized automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on employers which have at least 50 initial claims filed against them during a consecutive 5-week period. These employers then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others, 5 weeks. The number of weeks in a given month may be different from year to year, and the number of weeks in a year may vary. Therefore, analysis of over-the-month and over-the-year change in not seasonally adjusted series should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339

## Definitions

Employer. Employers in the MLS program include those covered by state unemployment insurance laws. Information on employers is obtained from the Quarterly Census of Employment and Wages (QCEW) program, which is administered by the Bureau of Labor Statistics (BLS).

Industry. Employers are classified according to the 2007 version of the North American Industry Classification System (NAICS). For temporary help and professional employer organization industries, monthly MLS-related statistics generally reflect layoffs related to underlying client companies in other industries. An individual layoff action at a client company can be small, but when initial claimants
associated with many such layoffs are assigned to a temporary help or professional employer organization firm, a mass layoff event may trigger.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an employer during a 5-week period, regardless of duration.

## Seasonal adjustment

Effective with the release of data for January 2005, BLS began publishing six seasonally adjusted monthly MLS series. The six series are the numbers of mass layoff events and mass layoff initial claims for the total, private nonfarm, and manufacturing sectors.

Seasonal adjustment is the process of estimating and removing the effect on time series data of regularly recurring seasonal events such as changes in the weather, holidays, and the beginning and ending of the school year. The use of seasonal adjustment makes it easier to observe fundamental changes in time series, particularly those associated with general economic expansions and contractions.

The MLS data are seasonally adjusted using the X-12ARIMA seasonal adjustment method on a concurrent basis. Concurrent seasonal adjustment uses all available monthly estimates, including those for the current month, in developing seasonal adjustment factors. Revisions to the most recent 5 years of seasonally adjusted data will be made once a year with the issuance of December data. Before the data are seasonally adjusted, prior adjustments are made to the original data to adjust them for differences in the number of weeks used to calculate the monthly data. Because weekly unemployment insurance claims are aggregated to form monthly data, a particular month's value could be calculated with 5 weeks of data in 1 year and 4 weeks in another. The effects of these differences could seriously distort the seasonal factors if they were ignored in the seasonal adjustment process. These effects are modeled in the X-12ARIMA program and are permanently removed from the final seasonally adjusted series.

Table 1. Mass layoff events and initial claimants for unemployment insurance, September 2007 to August 2011, seasonally adjusted

| Date | Total |  | Private nonfarm |  | Manufacturing |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
