U.S. DEPARTMENT OF LABOR

For release 10:00 a.m. (EST) Thursday, November 19, 2015
Technical information: (202) 691-6170 • iifstaff@bls.gov • www.bls.gov/iif/oshcdnew.htm
Media contact: (202) 691-5902 • PressOffice@bls.gov

## Nonfatal Occupational Injuries and Illnesses Requiring Days Away From Work, 2014

The overall incidence rate of nonfatal occupational injury and illness cases requiring days away from work to recuperate was 107.1 cases per 10,000 full-time workers in 2014, down from the 2013 rate of 109.4, the U.S. Bureau of Labor Statistics reported today. In 2014, there were 1,157,410 days-away-fromwork cases in private industry, state government, and local government-essentially unchanged from the number of cases reported in 2013. The median days away from work to recuperate-a key measure of severity of injuries and illnesses-was 9 days in 2014, 1 day more than reported in 2013. (See table 1.)

In private industry in 2014, the number of days-away-from-work cases $(916,440)$ and the incidence rate ( 97.8 cases per 10,000 full-time workers) was essentially unchanged from 2013. (See table 1.)

- The rate of falls on the same level in private industry increased to 16.6 in 2014, up from 15.4 in 2013. In transportation and warehousing the rate of falls on the same level increased from 28.3 in 2013 to 30.4 in 2014 - the second year in a row with an increase in this industry. Other industries where the rate of falls on the same level increased in 2014 were wholesale trade, health care and social assistance, and manufacturing. While the rate of falls on the same level in construction decreased in 2014, the rate was larger than the 2011 and 2012 rates. (See chart A and table 1.)

Chart A. Days-away-from-work incidence rates for falls on the same level by selected private industries, 2011-14

- Heavy and tractor-trailer truck drivers and laborers and freight, stock, and material movers in the private sector each had more than 50,000 injuries and illnesses in 2014 (each with 6 percent of total injuries and illnesses). The incidence rate for heavy and tractor-trailer truck drivers increased to 355.4 cases per 10,000 full-time workers in 2014, up from 322.8 in 2013. Laborers and freight, stock, and material movers had a 4 percent increase in the number of injuries and illnesses with days away from work in 2014. However, there was little change in the incidence rate of 284.5 in 2014 compared to 289.5 in 2013. (See table 4.)
- Musculoskeletal disorders (MSDs) accounted for 32 percent of all injury and illness cases in 2014 for all ownerships. The MSD incidence rate decreased to 33.8 cases per 10,000 full-time workers in 2014, down from 35.8 cases. Nursing assistants and laborers and freight, stock, and material movers incurred the highest number of MSD cases in 2014. (See table 16.) MSD cases accounted for 54 percent of total cases that occurred to nursing assistants in 2014.
- Injuries and illnesses to women for all ownerships accounted for 39 percent of the total days-away-from-work cases in 2014. Compared with men, women had higher incidence rates and number of cases associated with intentional violence by persons, falls on the same level, and repetitive motion. (See chart B and table 12.) For women, the intentional violence by person incidence rate increased to 4.0 cases per 10,000 full-time workers in 2014, up from 3.8 in 2013.

Chart B. Percent distribution of men and women workers for selected types of events or exposures, 2014

Note: The percent distributions exclude cases where gender was not specified.

## Occupation

There were six occupations in 2014, for all ownerships, where the incidence rate per 10,000 full-time workers was greater than 300 and the number of cases with days away from work was greater than 10,000 . These occupations were police and sheriff's patrol officers, correctional officers and jailers, firefighters, nursing assistants, construction laborers, and heavy and tractor-trailer truck drivers. (See table 4.)

Of these six occupations, heavy and tractor-trailer truck drivers had the highest number of days-away-from-work injuries and illnesses in 2014 with 55,710 cases ( 97 percent occurred in private industry) and an incidence rate of 365.5 cases per 10,000 full-time workers-up from 328.4 in 2013. For heavy and tractor-trailer truck drivers, the incidence rates increased for falls to lower level, falls on same level, and slips or trips without falls. Together, falls, slips, or trips accounted for 35 percent of the injuries and illnesses to heavy and tractor-trailer truck drivers in 2014. (See table 14.)
Nursing assistants had an incidence rate of 372.5 in 2014, a decrease from 392.8 in 2013. Injuries and illnesses resulting from overexertion and bodily reaction accounted for 55 percent of the cases occurring to nursing assistants and decreased to 21,430 cases in 2014. The incidence rate for overexertion and bodily reaction for nursing assistants was 204.6-more than five times greater (35.6) than for all workers for this type of event or exposure. (See tables 4 and 14.)

State and local government For all occupations, the incidence rate for public sector workers was 167.4 cases per 10,000 full-time workers, compared to the rate of 97.8 for all private sector workers. Some public sector (state and local government combined) occupations experienced higher rates than the equivalent private sector occupations. Public sector janitors and cleaners had an incidence rate that was over twice that of private sector janitors and cleaners. (See chart C.) The rate for public sector landscaping
and groundskeeping workers was 795.1 cases per 10,000 full-time workers, compared to 190.4 for private sector landscaping and groundskeeping workers.

Chart C. Incidence rates of injuries and illnesses with days away from work for selected occupations with high case counts by ownership, 2014

Note: These occupations had at least 1 percent of the days-away-from-work cases in the respective ownerships.

In state government, there were 67,400 cases with days away from work in 2014 which was essentially unchanged from the number reported for 2013. The incidence rate was 170.3 cases per 10,000 full-time workers. State government workers required a median of 12 days away from work, up from a median of 10 days in 2013. (See table 3.)
Correctional officers and jailers had 10,590 cases in 2014, the most injuries and illnesses in state government, with 16 percent of the total. The rate of 491.2 was essentially unchanged in 2014 compared to 2013. (See table 4.)

In local government, the number of cases was 173,570 and the incidence rate was 166.4 cases per 10,000 full-time workers, both essentially unchanged from 2013. Workers in local government took a median of 10 days away from work to recuperate from their occupational injuries and illnesses. (See table 3.)
Police and sheriff's patrol officers had the highest number of cases with 24,230 in local government. (See table 4.) The incidence rate was 519.9 per 10,000 full-time workers, essentially unchanged from 2013.

## Case characteristics and musculoskeletal disorders

The leading event or exposure resulting in occupational injuries or illnesses for all ownerships in 2014 was overexertion and bodily reaction with 384,260 cases accounting for 33 percent of total cases. The 2014 incidence rate for overexertion or bodily reaction was 35.6 cases per 10,000 full-time workers, down from 37.7 in 2013. (See table 5.)

Falls, slips, or trips accounted for an additional 27 percent of the total in 2014 with 316,650 days-away-from-work cases. The incidence rate increased to 29.3 in 2014, up from 27.9 in 2013.
The leading nature (type) of injury or illness in 2014 for all ownerships was sprains, strains, or tears with 420,870 days-away-from-work cases. The rate was 38.9 cases per 10,000 full-time workers, down from a rate of 40.2 in 2013. Workers who sustained sprains, strains, or tears required a median of 10 days away from work compared to 9 days for all types of injuries or illnesses. (See table 5.)

Workers who sustained fractures required a median of 32 days to recuperate before returning to work. This was more than three times the number of days required for all types of injuries or illnesses.

Musculoskeletal disorders In 2014 for all workers, there were 365,580 cases of musculoskeletal disorders (MSDs), such as sprains or strains resulting from overexertion in lifting. The MSD incidence rate was 33.8 cases per 10,000 full-time workers in 2014, down from 35.8 in 2013. Workers who sustained an MSD required a median of 13 days to recuperate before returning to work in 2014, compared to 9 days for all types of cases and up from 11 days in 2013. (See table 16.)

## Industry

Three private sector industries had more than 100,000 days-away-from-work incidents in 2014: health care and social assistance $(164,440)$, manufacturing $(125,990)$, and retail trade $(120,640)$. Of these three industries, retail trade was the only one to have a decrease in the incidence rate, to 104.5 in 2014 down from 112.8 in 2013. The number of cases in manufacturing increased 5 percent in 2014. The incidence rate in this industry was 103.1 cases in 2014, essentially unchanged from 100.9 reported for 2013. (See table 1.)
Transportation and warehousing had 95,040 occupational injuries and illnesses in 2014 resulting in an incidence rate of 225.2 per 10,000 full-time workers-the highest reported among private industries. Despite a 9 percent increase in the case count from 2013, the incidence rate was essentially unchanged from the rate reported for 2013. Musculoskeletal disorders (MSDs) accounted for 40 percent of the cases in transportation and warehousing in 2014. The MSD rate increased to 89.9 cases per 10,000 full-time workers, up from 80.3 in 2013. (See chart D and table 1.)

Chart D. Musculoskeletal disorder incidence rates for selected private sector industries, 2013-14

Health care and social assistance had a rate of 121.3 cases per 10,000 full-time workers, the highest among the private industry sectors with greater than 100,000 cases. Musculoskeletal disorders accounted for 39 percent of the total injuries and illnesses reported in this industry in 2014. The MSD incidence rate decreased to 46.9 cases, down from 50.2 in 2013. (See chart D.) The rate of violence and other injuries by persons or animal decreased to 14.4 cases per 10,000 full-time workers in 2014. The rate of injuries and
illnesses from violence in this industry was more than three times greater than the violence rate for all private industries. (See table 1.)

There were 7,680 occupational injuries and illnesses in mining (including quarrying, and oil and gas extraction) in 2014 resulting in an incidence rate of 84.7 -less than the overall private industry rate of 97.8. Workers in the mining industry required a median of 31 days away from work to recuperate from injuries and illnesses, up from 24 days in 2013. This was more than three times the number of days required in all industries. (See table 1.)

## Gender

The nonfatal injury and illness incidence rate for men in private sector, state government, and local government (all ownerships) was 116.5 in 2014, down from 119.2 reported for 2013. (See table 6.) Injuries and illnesses to men accounted for 60 percent $(699,470)$ of all cases and required a median of 10 days away from work, 3 days more than the median for women. The 2014 nonfatal injury and illness incidence rates for women in all ownerships was 95.1 cases per 10,000 full-time workers.
The two leading types of injuries or illnesses for both men and women were sprains, strains, or tears, and soreness and pain. (See chart E and table 12.) Men incurred sprains, strains, or tears at a greater rate than women with 41.7 cases per 10,000 full-time workers compared to a rate of 35.8 for women. Women workers had a higher incidence rate than men for bruises, contusions with an incidence rate of 10.0 compared with a rate of 8.3 for men.

Chart E. Incidence rates of nonfatal occupational injuries and illnesses involving days away from work by gender and selected nature of injury or illness, all ownerships, 2014

For additional data on gender, see tables $6,8,9$, and 12 . For additional data on nature of injury or illness, see tables $2,5,12,13$, and 15 .

## Age groups

Workers in age group 45 to 54 had the highest number $(286,490)$ of days-away-from-work cases in 2014, for all ownerships, with an incidence rate of 117.2 cases per 10,000 full-time workers. (See chart F and table 6.) The number of injuries and illnesses to workers in age group 55 to 64 increased to 201,740 cases in 2014. Despite the increase in the number of cases for age group 55 to 64 , the incidence rate (116.3 cases per 10,000 full-time workers) was essentially unchanged from the rate reported for 2013. Incidence rates decreased in 2014 for workers in age groups 25 to 34 and 35 to 44 .

The median days away from work increased by 1 day in 2014 for workers in age groups 35 to 44 , 45 to 54 , and 55 to 64 . For workers in age group 65 and older, the median increased 3 days in 2014 to 17 median days away from work to recuperate from occupational injuries and illnesses.

Chart F. Incidence rate, number of cases, and median days away from work by age group, all ownerships, 2014

For additional information on age groups, see tables 6, 8, 9, and 12.

## Race or ethnicity

There were 444,590 days-away-from-work cases reported among white workers, which accounted for 38 percent of all cases for all ownerships. (See table 7.) This was essentially unchanged from the number of cases reported for 2013. Hispanic or Latino workers accounted for 12 percent of the injuries and illnesses in 2014 and the number of cases did not change significantly from 2012. Asian and Native Hawaiian or other Pacific Islander were the only groups with an increase in cases in 2014. The number of injuries and illnesses to Asian workers increased to 15,950 cases in 2014, up from 14,180 in 2013. The number of injuries and illnesses increased 27 percent for Native Hawaiian or Pacific Islanders to 3,860 cases. Race or ethnicity were unreported in 40 percent of all cases.
For additional information on race or ethnicity, see tables 7, 8, and 9.

## Notes

This release is the third in a series of releases from the BLS covering occupational safety and health statistics for 2014. The first release, in September 2015, covered work-related fatal injuries from the 2014 Census of Fatal Occupational Injuries. In October 2015, the Survey of Occupational Injuries and Illnesses (SOII) reported counts and rates of injuries and illnesses by detailed industry and case type for 2014. Data in this third release are a subset of the SOII data and include additional detail about the case
circumstances and worker characteristics for occupational injury and illness cases that required at least 1 day away from work to recuperate. While the data come from the same survey, they are reported at different levels of precision. For example, in this release, injury and illness incidence rates for days-away-from-work cases are reported as 107.1 cases per 10,000 full-time workers. However, the same incidence rate in the SOII annual summary news release is reported as 1.1 cases per 100 full-time workers. Data users are cautioned to take into account the different levels of precision when analyzing the data. Additional background and methodological information regarding the BLS occupational safety and health statistics program can be found in Chapter 9 of the BLS Handbook of Methods at www.bls.gov/opub/hom/pdf/homch9.pdf.
In 2014, the SOII began using the 2012 North American Industry Classification System (NAICS). Comparison of SOII estimates for 2014 to prior years is not advised below the sector level due to this change. For additional detailed information regarding NAICS revisions, visit www.bls.gov/bls/naics.htm.

This release does not present all the publishable estimates and rates for days-away-from-work cases. Additional detailed data are available from BLS staff at (202) 691-6170, iifstaff@bls.gov, and the BLS website at www.bls.gov/iif/home.htm. Information in this release is available to sensory-impaired individuals upon request. Voice phone: (202) 691-5200; Federal relay service: (800) 877-8339.
Days of job transfer or restriction pilot study In January of 2012, the BLS Survey of Occupational Injuries and Illnesses (SOII) began to collect information on case circumstances and worker characteristics for days-of-job-transfer-or-restriction (DJTR) cases. The pilot included six industries: specialty trade contractors; food manufacturing; building material and garden equipment supplies dealers; air transportation; warehousing and storage; and nursing and residential care facilities. The 2011-13 data from this study were published in August 2015 in BLS Report 1056: www.bls.gov/opub/reports/iif/a-pilot-study-of-job-transfer-or-work-restriction-cases-2011-2013.pdf.
In January of 2015, the original six industries selected for the DJTR study were replaced with a new set of six industries. The new industries are beverage and tobacco product manufacturing; general merchandise stores; couriers and messengers; waste management and remediation services; hospitals; and accommodation. DJTR data for these industries will be released in 2016.

## Completeness of SOII

BLS has long acknowledged that some conditions which often are difficult for employers to relate to the workplace are not adequately recognized and reported during a calendar year (for example, long-term latent illnesses) and are believed to be understated in SOII illness measures. Following several studies in the mid-2000s questioning the completeness of SOII injury and illness counts, BLS began internal research in 2007 and, at the request of Congress, established an ongoing research program. Initial research conducted between 2009 and 2012 found that the SOII failed to capture some cases but could not determine the magnitude or leading cause of an undercount. Researchers determined that the ability to match injury and illness data across different data sources was impacted by various factors, such as establishment type, the time of case filing, and the type of injury. BLS initiated additional research from 2012 to 2014 that included interviews with employers in four states to learn more about their injury and illness recordkeeping practices and a multiple-year match of SOII data to workers' compensation records to analyze matching trends over time. BLS is currently funding a nationwide follow-back survey with SOII respondents to learn more about their recordkeeping practices and timing issues that may negatively affect injury and illness reporting to the SOII. BLS also continues to conduct exploratory research on the collection of occupational injury and illness data directly from employees. For more information on undercount research, please see www.bls.gov/iif/undercount.htm.

TABLE 1. Number, median days away from work ${ }^{1}$, and incidence rate ${ }^{2}$ for nonfatal occupational injuries and illnesses involving days away from work ${ }^{3}$ by ownership, industry, musculoskeletal disorders ${ }^{4}$, and event or exposure, 2014

| Industry | Number | Median days away from work | Musculoskeletal disorders (incidence rate) | Incidence rate | Event or exposure leading to injury or illness (incidence rate) |  |  |  |  |  |  |  |  |  |

1 Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved fewer days than a specified median. Median days away from work are represented in actual values.
${ }_{2}$ The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as (N/EH) $\times 20,000,000$, where
$\mathrm{N}=$ number of injuries and illnesses
$\mathrm{EH}=$ total hours worked by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
(working 40 hours per week, 50 weeks per year).
Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }_{4}$ Musculoskeletal disorders include cases in which the nature of the injury or illness is pinched nerve; herniated disc; meniscus tear; sprains, strains, tears; hernia (traumatic and nontraumatic); pain, swelling, and numbness; carpal or tarsal tunnel syndrome; Raynaud's syndrome or phenomenon; musculoskeletal system and connective tissue diseases and disorders, and when the event or exposure leading to the injury or illness is overexertion and bodily reaction, unspecified; overexertion involving outside sources; repetitive motion involving microtasks; other and multiple exertions or bodily reactions; and rubbed, abraded, or jarred by
vibration.
5 Excludes farms with fewer than 11 employees
6 Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore, estimates for these industries are not comparable to estimates in other industries.

Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.
Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

${ }^{1}$ The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as ( $\mathrm{N} / \mathrm{EH}$ ) $\times 20,000,000$, where
$\mathrm{EH}=$ total hours worked by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
(working 40 hours per week, 50 weeks per year).
2 Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved fewer days than a specified median. Median days away from work are represented in actual values
${ }^{3}$ Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }^{4}$ Excludes farms with fewer than 11 employees.
5 Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as
those in Oil and Gas Extraction and related support activities. Data for mining perators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. do pot reflect the changes the eccupational Safety and Health Administration made to its recordkeeping requirements effective January 1,2002. therefore, estimates for these industries are not comparable to estimates requirements effe 6 6 industries
(the Federal Railroad Administration, U.S. sportation.

1 The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as ( $\mathrm{N} / \mathrm{EH}$ ) $\times 20,000,000$, where
$\mathrm{N}=$ number of injuries and illnesses
$\mathrm{EH}=$ total hours worked by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
2 (working 40 hours per week, 50 weeks per year).
${ }^{2}$ Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved fewer days than a specified median. Median days away from work are represented in actua values.
${ }^{3}$ Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }^{4}$ Excludes farms with fewer than 11 employees
5 Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal,
metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore, estimates for these industries are not comparable to estimates in other industries.
${ }^{6}$ Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration,
U.S. Department of Transportation.
${ }_{7}$ Musculoskeletal disorders include cases in which the nature of the injury or illness is pinched nerve; herniated disc; meniscus tear; sprains, strains, tears; hernia (traumatic and nontraumatic); pain, swelling, and numbness; carpal or tarsal tunnel syndrome; Raynaud's syndrome or phenomenon; musculoskeletal injury or illness is overexertion and bodily reaction, unspecified; overexertion involving outside sources; repetitive motion involving microtasks; other and multiple exertions or bodily reactions; and rubbed, epetitive motion involving microtasks; other and multiple exertions or bodily reactions; and rubbed, abred

${ }^{1}$ Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.

Excludes farms with fewer than 11 employees.
3 Data for Mining (Sector 21 in the North American Industry Classification System-- United States 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002;
therefore, estimates for these industries are not comparable to estimates in other industries
${ }^{4}$ Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.
${ }_{5}$ Race and ethnicity data do not add to total. Some cases may be counted as both multi-race and Hispanic and other race.
Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

${ }^{1}$ Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away varying lengths of absences from work among the cases with days away
from work. Half the cases involved more days and half involved fewer days than a specified median. Median days away from work are represented in actual values.
${ }^{2}$ Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }^{3}$ Excludes farms with fewer than 11 employees.
${ }_{4}$ Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department o Labor. Independent mining contractors are excluded from the coal, metal,
and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore, estimates for thes industries are not comparable to estimates in other industries.
5 Data for employers in rail transportation are provided to BLS by the
Federal Railroad Administration, U.S. Department of Transportation
${ }^{6}$ Race and ethnicity data do not add to total. Some cases may be counted as both multi-race and Hispanic and other race.

Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

1 Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved fewer days than a specified median Median days away from work are represented in actual values
${ }^{2}$ Days-away-from-work cases include those that resulted in days away from work, ${ }_{3}$ Selected occupations ranked in descending case count for private, State, and local
government
Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals. Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.

Excludes farms with fewer than 11 employees.
Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational

Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002, herefore, estimates for these industries are not comparable to estimates in other industries.
${ }^{4}$ Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

${ }^{1}$ The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as (N/EH) x 20,000,000, where
$N=$ number of injuries and ilinesses
$\mathrm{EH}=$ total hours worked by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
(working 40 hours per week, 50 weeks per year)
2 Days-away-from-work cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }^{3}$ Musculoskeletal disorders include cases in which the nature of the injury or illness is pinched nerve; herniated disc; meniscus tear; sprains, strains, tears; hernia (traumatic and nontraumatic); pain, swelling, and
numbness; carpal or tarsal tunnel syndrome, Raynaud's syndrome or phenomenon; musculoskeletal system and connective tissue diseases and disorders, and when the event or exposure leading to the injury or iliness is overexertion and bodily reaction, unspecified; overexertion involving outside sources; repetitive motion involving microtasks; other and multiple exertions or bodily reactions; and rubbed, abraded, or jarred by vibration.
Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

${ }^{1}$ The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as (N/EH) x 20,000,000, where
$\mathrm{N}=$ number of injuries and illnesses
by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
week, 50 weeks per year).
cases include those that resulted in days away from work, some of which also included job transfer or restriction.
${ }^{3}$ These occupations have at least $0.1 \%$ of full-time equivalent employment.
4 Includes nonclassifiable responses.
Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

${ }^{1}$ The incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as ( $\mathrm{N} / \mathrm{EH}$ ) x $20,000,000$, where
$\mathrm{N}=$ number of injuries and illnesses
$\mathrm{EH}=$ total hours worked by all employees during the calendar year
$20,000,000=$ base for 10,000 equivalent full-time workers
(working 40 hours per week, 50 weeks per year).
${ }^{2}$ Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved fewer days than a specified median. Median days away from work are represented in actual values
Days-away-from-work cases include those that resulted in days away from work, some of which also 4 Mublos
Musculoskeletal disorders include cases in which the nature of the injury or illness is pinched nerve herniated disc; meniscus tear; sprains, strains, tears; hernia (traumatic and nontraumatic); pain, swelling, and numbness; carpal or tarsal tunnel syndrome; Raynaud's syndrome or phenomenon; musculoskeletal system and overexertion and bodily reaction, unspecified; overexertion involving outside sources; repetitive motion involving microtasks; other and multiple exertions or bodily reactions; and rubbed, abraded, or jarred by vibration.
${ }^{5}$ Selected occupations ranked in descending musculoskeletal disorder count for private, State, and local
government
Excludes farms with fewer than 11 employees
Data for Mining (Sector 21 in the North American Industry Classification System-- United States, 2012) include establishments not governed by the Mine Safety and Health Administration rules and reporting, such as those in Oil and Gas Extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping equirements effective Jan
in other industries.
employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation

Note: Dash indicates data do not meet publication guidelines. Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.
