PRODUCER PRICE INDEXES – JANUARY 2010

The Producer Price Index for Finished Goods rose 1.4 percent in January, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. This increase followed a 0.4-percent advance in December and a 1.5-percent rise in November. In January, at the earlier stages of processing, prices received by manufacturers of intermediate goods climbed 1.7 percent, and the crude goods index jumped 9.6 percent. On an unadjusted basis, prices for finished goods moved up 4.6 percent for the 12 months ended January 2010, their third consecutive 12-month increase. (See table A.)

Table A. Monthly and 12-month percent changes in selected stage-of-processing price indexes, seasonally adjusted

Month	Finished goods					Intermediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)

2010							
Jan.....	1.4	0.4	5.1	0.3	4.6	1.7	9.6

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2009. In addition, indexes for September 2009 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Percent change

Stage-of-Processing Analysis

Finished goods

About three-fourths of the broad-based January advance in the finished goods index can be traced to higher prices for energy goods, which jumped 5.1 percent. The indexes for finished goods less foods and energy and for finished consumer foods also contributed to the finished goods increase, rising 0.3 percent and 0.4 percent, respectively.

Finished energy: The index for finished energy goods rose 5.1 percent in January, its fourth consecutive monthly increase. About two-thirds of the January advance can be attributed to an 11.5-percent jump in gasoline prices. Increases in the indexes for liquefied petroleum gas and home heating oil also were major factors in the finished energy goods rise. (See table 2.)

Finished core: The index for finished goods less foods and energy moved up 0.3 percent in January after no change in December. Leading this advance, the index for light motor trucks rose 1.9 percent. Higher prices for pharmaceutical preparations also contributed to the increase in the finished core index.

Finished foods: The index for finished consumer foods moved up 0.4 percent in January, its fourth consecutive monthly advance. A major factor in the January rise was a 3.0-percent increase in meat prices.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components climbed 1.7 percent in January, its largest increase since a similar 1.7-percent advance in August 2009. Accounting for about three-fourths of the January rise, prices for intermediate energy goods jumped 6.9 percent. The index for intermediate materials less foods and energy also contributed to this advance, increasing 0.5 percent. By contrast, prices for intermediate foods and feeds fell 0.3 percent. On a 12-month basis, prices for intermediate goods moved up 4.6 percent, the second consecutive month of year-over-year increases. (See table B.)

Intermediate energy: The index for intermediate energy goods rose 6.9 percent in January, the largest increase since a 9.6-percent jump in November 2007. A major factor in the January advance was a 20.4-percent surge in diesel fuel prices. The indexes for gasoline and jet fuel also contributed significantly to higher intermediate energy goods prices. (See table 2.)

Intermediate core: The index for intermediate materials less foods and energy moved up 0.5 percent, its eighth consecutive monthly increase. Nearly half of the January advance can be attributed to a 3.4-percent rise in basic organic chemical prices. An increase in the steel pipe and tube index also was a factor in the intermediate core advance.

Intermediate foods: The index for intermediate foods and feeds fell 0.3 percent, the first decline in six months. This decrease was led by the index for corn, cottonseed, and soybean cake and meal, which dropped 7.5 percent.

Chart 3. Monthly percent changes in the Producer Price Index for Intermediate Goods, seasonally adjusted: January 2009 – January 2010

Percent change

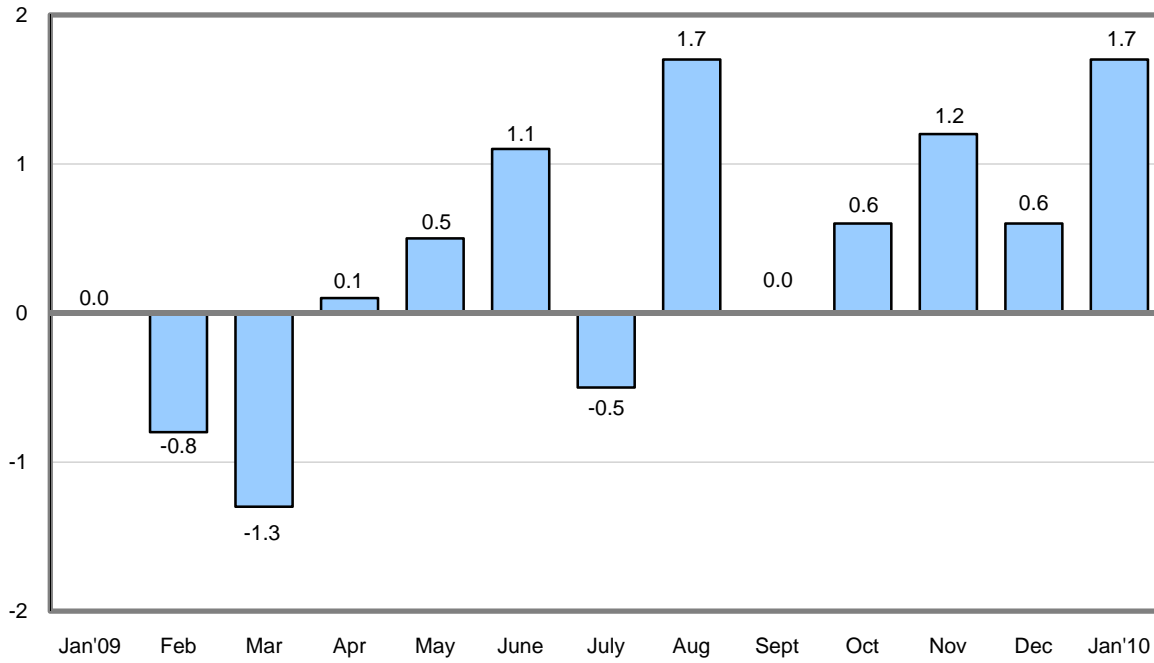

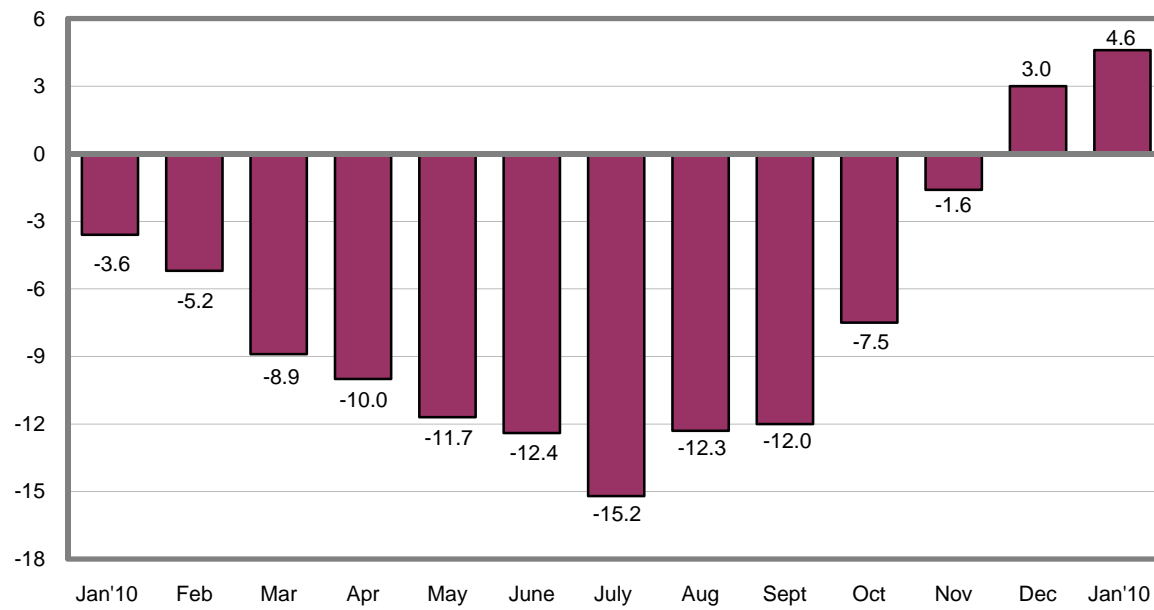

Chart 4. 12-month percent changes in the Producer Price Index for Intermediate Goods, not seasonally adjusted: January 2009 – January 2010

Percent change

Crude goods

The Producer Price Index for Crude Materials for Further Processing climbed 9.6 percent in January. For the 3-month period ending in January, crude material prices rose 16.1 percent, accelerating from an 8.5-percent increase for the 3 months ended October 2009. In January, about three-quarters of the broad-based monthly advance is attributable to a 16.8-percent jump in prices for crude energy materials. Also contributing to the January increase, in roughly equal proportions, the index for crude nonfood materials less energy rose 6.6 percent and prices for crude foodstuffs and feedstuffs moved up 3.2 percent. (See table B.)

Crude energy: The index for crude energy materials jumped 16.8 percent in January. From October through January, prices for crude energy materials climbed 27.5 percent, following a 9.4-percent gain for the 3 months ended October 2009. Two-thirds of the monthly January increase can be traced to a 25.5-percent surge in the natural gas index. Higher crude petroleum prices also contributed to the rise in the index for crude energy materials. (See table 2.)

Crude core: The index for crude nonfood materials less energy advanced 6.6 percent in January. For the 3 months ending in January, crude core prices moved up 10.2 percent, compared with a 12.1-percent rise for the 3 months ended October 2009. Over half of January's over-the-month increase is attributable to a 17.3-percent jump in the index for iron and steel scrap. Higher prices for nonferrous scrap and wastepaper also were factors in the January increase for the crude core index.

Crude foods: The index for crude foodstuffs and feedstuffs moved up 3.2 percent in January. For the 3 month period ending in January, prices for crude foodstuffs and feedstuffs rose 7.9 percent, after advancing 5.1 percent for the 3 months ended October 2009. Most of the January increase can be traced to a 5.8-percent rise in the index for slaughter livestock.

Services Analysis

Trade industries: The Producer Price Index for the Net Output of Total Trade Industries fell 0.5 percent in January, its second consecutive decline. (Trade indexes measure changes in margins received by wholesalers and retailers.) About two-thirds of the January decrease is attributable to a 9.3-percent drop in margins received by gasoline stations. Margins received by general merchandise stores and home centers also fell in January, contributing significantly to the decline in the total trade industries index.

Transportation and warehousing industries: The Producer Price Index for the Net Output of Transportation and Warehousing Industries jumped 1.3 percent in January, its fourth straight advance. Accounting for about forty percent of the January increase, prices received by the couriers industry rose 6.0 percent. Higher prices received by the air transportation industry group and the industry for pipeline transportation of crude oil also were major factors in the January advance in the transportation and warehousing industries index.

Traditional service industries: The Producer Price Index for the Net Output of Total Traditional Service Industries moved up 1.0 percent in January, its ninth advance in the last ten months. Almost half of the January rise can be traced to a 4.9-percent increase in prices received by the depository credit intermediation industry group. Higher prices received by insurance carriers and offices of physicians also contributed to the advance in the total traditional service industries index.

The Producer Price Index for February 2010 is scheduled to be released on Wednesday, March 17, 2010 at 8:30 a.m. (EDT).

Resampling of Industries

Effective with this release, the Producer Price Index (PPI) includes data for 65 resampled industries and one newly introduced industry classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see the January 2010 issue of the *PPI Detailed Report* online at <http://www.bls.gov/ppi/ppidr201001.pdf>, or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

* For further discussion of this newly introduced PPI, see the January 2010 issue of the *PPI Detailed Report* online at <http://www.bls.gov/ppi/ppidr201001.pdf>, or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2009 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2005 through December 2009. Revised seasonally adjusted data for this period, as well as seasonal adjustment factors for commodity indexes to be used through December 2010, were released February 16, 2010. To obtain this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705, or visit the Producer Price Index homepage at www.bls.gov/ppi.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2009, based on former and recalculated seasonal factors. These percent changes include final price data through August 2009 and may differ from values shown in tables A and B of this release, which include final price data through September 2009.

Over-the-month percent changes in major stage-of-processing indexes, seasonally adjusted, using former and recalculated seasonal factors for 2009

	Finished goods		Intermediate goods		Crude goods

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 9,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes goods and services by similarity of material composition or end use, disregarding their industry of origin. Table 6 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major commodity groupings (two-digit commodity codes), subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (five- and six-digit codes), item groupings (seven-digit codes) and individual items (eight-, nine-, and ten-digit codes).

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 2002 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2002 through December

2006, PPI weights were derived from 1997 shipment values. Industry indexes now are calculated with 2002 weights and net output ratios. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is comprised of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_itc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas

percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at www.bls.gov/ppi/ppiescalation.htm. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-

processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of over 800 seasonally adjusted series, only 23 were subject to intervention in 2009.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 2.1 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2008.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Clicking on the "PPI Databases" link reveals the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series

shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification system by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice
pcu325412325412A	Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, discontinued NAICS series</u>	<u>Provides data for</u>
ndu212231212231	Lead ore and zinc ore mining
ndu2122312122312	Lead and zinc concentrates
ndu212231212231214	Lead concentrates

- **Text Files (FTP)** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP sites can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

	<u>Directory:</u>
Industry Data	/pub/time.series/pc
Industry Data - Discontinued (NAICS basis)	/pub/time.series/nd
(SIC basis)	/pub/time.series/pd
Commodity Data	/pub/time.series/wp
Commodity Data - Discontinued Series	/pub/time.series/wd
Special requests	/pub/special.requests/ppi

The FTP site maintains files to help with searches and downloads. These files are centrally located in the [/pub/doc](#) directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is **wp.txt**; for discontinued commodity series, **wd.txt**; for current industry-based PPI data based on NAICS, **pc.txt**; for industry-based SIC time series that have been discontinued, **pd.txt**; and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled [/pub/time.series/compressed/tape.format/](#) on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (www.bls.gov). Clicking on the “Databases & Tables” tab at the top of the homepage calls up a listing all available BLS programs.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the

statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

1 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

2 The indexes for September 2009 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3 Includes crude petroleum.

4 Excludes crude petroleum.

5 Percent of total finished goods.

6 Percent of total intermediate materials.

7 Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

8 Percent of total crude materials.

Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing

[1982=100, unless otherwise indicated]

Accommodation.....	721	12/96	140.9	136.8	136.9	-2.6	0.1
Commercial machinery repair and maintenance.....	8113	06/06	106.9	106.9	106.9	0.8	0.0

1 Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2 The indexes for September 2009 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

"—" Data not available.

NOTE: NAICS replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

Table 5. Producer price indexes by stage of processing, seasonally adjusted
 [1982=100]

Grouping	Index ¹					
	Aug. 2009	Sept. 2009	Oct. 2009	Nov. 2009	Dec. 2009	Jan. 2010
Finished goods.....	174.1	173.3	174.0	176.6	177.3	179.8
Finished consumer goods.....	180.9	179.9	181.2	184.7	185.7	189.0
Finished consumer foods.....	174.3	174.3	176.9	177.7	180.0	180.7
Crude.....	153.4	150.0	172.7	175.7	181.6	181.8
Processed.....	176.1	176.5	176.8	177.4	179.3	180.1
Finished consumer goods, excluding foods.....	182.2	180.9	181.7	186.1	186.7	190.9
Nondurable goods less foods.....	197.3	195.6	197.5	203.6	204.6	210.6
Durable goods.....	145.4	144.7	143.4	144.3	144.1	144.6
Capital equipment.....	157.5	157.2	156.4	157.0	156.9	157.3
Manufacturing industries.....	159.6	159.4	159.1	159.4	159.3	159.2
Nonmanufacturing industries.....	156.6	156.2	155.4	156.0	155.9	156.4
Intermediate materials, supplies, and components.....	173.3	173.3	174.3	176.4	177.4	180.5
Materials and components for manufacturing.....	163.8	164.9	165.3	166.6	167.7	169.3
Materials for food manufacturing.....	163.2	163.8	164.6	166.2	169.0	168.9
Materials for nondurable manufacturing.....	196.8	197.3	196.7	201.1	203.1	206.9
Materials for durable manufacturing.....	168.8	173.0	174.8	175.2	176.8	179.4
Components for manufacturing.....	140.7	140.8	141.1	140.9	141.1	141.1
Materials and components for construction.....	201.5	202.1	202.1	201.7	202.6	202.2
Processed fuels and lubricants.....	165.1	162.1	166.0	172.9	174.0	185.7
Manufacturing industries.....	163.4	161.5	165.4	170.6	172.6	180.4
Nonmanufacturing industries.....	166.4	162.9	166.9	174.4	175.2	188.5
Containers.....	193.7	193.4	193.2	192.5	192.6	193.0
Supplies.....	171.4	171.7	171.8	172.0	172.9	173.0
Manufacturing industries.....	167.0	167.4	167.6	167.2	167.5	167.8
Nonmanufacturing industries.....	170.7	171.0	171.0	171.4	172.3	172.4
Feeds.....	170.9	171.9	169.8	171.4	176.0	173.0
Other supplies.....	172.2	172.6	172.7	173.0	173.6	173.9
Crude materials for further processing.....	177.8	173.9	184.5	193.9	195.4	214.2
Foodstuffs and feedstuffs.....	129.3	127.9	135.0	136.7	141.1	145.6
Nonfood materials.....	207.9	201.8	214.7	230.8	229.4	260.0
Nonfood materials except fuel ²	234.5	236.8	246.4	253.5	245.5	270.8
Manufacturing ²	220.0	222.1	231.5	238.4	230.6	255.3
Construction.....	199.6	200.8	200.6	200.2	201.2	199.9
Crude fuel ³	156.3	138.2	155.2	183.8	192.3	228.9
Manufacturing industries.....	175.5	165.0	176.9	195.8	202.0	223.8
Nonmanufacturing industries.....	158.7	140.0	157.6	187.0	195.8	233.6
Special groupings						
Finished goods, excluding foods.....	173.2	172.3	172.5	175.6	175.9	178.7
Intermediate materials less foods and feeds.....	174.1	174.1	175.1	177.2	178.1	181.5
Intermediate foods and feeds.....	165.1	165.7	165.8	167.1	170.1	169.6
Crude materials less agricultural products ²	212.2	205.2	218.3	235.9	234.8	267.6
Finished energy goods.....	151.7	149.0	151.8	160.3	161.4	169.7
Finished goods less energy.....	172.7	172.5	172.5	173.3	173.8	174.4
Finished consumer goods less energy.....	179.4	179.2	179.7	180.6	181.5	182.2
Finished goods less foods and energy.....	172.3	172.1	171.3	172.1	172.1	172.7
Finished consumer goods less foods and energy.....	182.6	182.4	181.6	182.6	182.7	183.4
Consumer nondurable goods less foods and energy.....	214.7	215.0	215.0	215.9	216.5	217.4
Intermediate energy goods.....	167.5	164.2	167.8	175.3	176.2	188.4
Intermediate materials less energy.....	172.5	173.4	173.7	174.3	175.3	176.0
Intermediate materials less foods and energy.....	173.3	174.2	174.5	175.0	175.8	176.7
Crude energy materials ²	184.2	173.7	189.0	212.1	206.2	240.9
Crude materials less energy.....	164.2	164.2	171.5	172.2	178.5	186.4
Crude nonfood materials less energy ³	264.9	270.3	276.4	273.5	285.9	304.7

1 All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for September 2009 have been recalculated to incorporate late reports and corrections by respondents.

2 Includes crude petroleum.

3 Excludes crude petroleum.
