PRODUCER PRICE INDEXES – MAY 2022

The Producer Price Index for final demand increased 0.8 percent in May, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. This rise followed advances of 0.4 percent in April and 1.6 percent in March. (See table A.) On an unadjusted basis, final demand prices moved up 10.8 percent for the 12 months ended in May.

In May, nearly two-thirds of the rise in the index for final demand was due to a 1.4-percent advance in prices for final demand goods. The index for final demand services increased 0.4 percent.

Prices for final demand less foods, energy, and trade services moved up 0.5 percent in May after increasing 0.4 percent in April. For the 12 months ended in May, the index for final demand less foods, energy, and trade services rose 6.8 percent.

Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted

Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted

Final Demand

Final demand goods: The index for final demand goods moved up 1.4 percent in May, the fifth consecutive rise. Over 70 percent of the increase in May can be traced to a 5.0-percent advance in prices for final demand energy. The index for final demand goods less foods and energy moved up 0.7 percent, while prices for final demand foods were unchanged.

Product detail: Forty percent of the May increase in prices for final demand goods can be attributed to an 8.4-percent advance in the index for gasoline. Prices for jet fuel, residential natural gas, steel mill products, diesel fuel, and processed young chickens also moved higher. Conversely, the index for beef and veal fell 9.5 percent. Prices for iron and steel scrap and for commercial electric power also decreased. (See table 2.)

Final demand services: The index for final demand services moved up 0.4 percent in May following a 0.2-percent decrease in April. Over half of the broad-based advance can be traced to a 2.9-percent rise in prices for final demand transportation and warehousing services. The indexes for final demand trade services and for final demand services less trade, transportation, and warehousing also moved higher, 0.4 percent and 0.1 percent, respectively. (Trade indexes measure changes in margins received by wholesalers and retailers.)

Product detail: Nearly 30 percent of the May increase in the index for final demand services can be attributed to prices for truck transportation of freight, which rose 2.9 percent. The indexes for services related to securities brokerage and dealing (partial), machinery and equipment wholesaling, chemicals and allied products wholesaling, automobiles and automobile parts retailing, and transportation of passengers (partial) also advanced. In contrast, margins for fuels and lubricants retailing declined 21.7 percent. The indexes for portfolio management and for guestroom rental also moved lower.

Intermediate Demand by Commodity Type

Within intermediate demand in May, prices for processed goods advanced 2.3 percent, the index for unprocessed goods increased 6.3 percent, and prices for services rose 0.6 percent. (See tables B and C.)

Processed goods for intermediate demand: The index for processed goods for intermediate demand increased 2.3 percent in May, the fifth consecutive advance. Over half of the broad-based increase in May can be traced to a 1.7-percent rise in prices for processed materials less foods and energy. The indexes for processed energy goods and for processed foods and feeds also moved higher, 4.6 percent and 0.9 percent, respectively. For the 12 months ended in May, prices for processed goods for intermediate demand jumped 21.6 percent.

Product detail: One-quarter of the May increase in the index for processed goods for intermediate demand can be attributed to a 10.7-percent rise in prices for steel mill products. The indexes for utility natural gas, gasoline, diesel fuel, jet fuel, and ethanol also advanced. Conversely, prices for commercial electric power declined 1.9 percent. The indexes for primary nonferrous metals and for beef and veal also moved lower.

Unprocessed goods for intermediate demand: The index for unprocessed goods for intermediate demand climbed 6.3 percent in May, the fifth consecutive advance. Leading the May increase, prices for unprocessed energy materials rose 16.3 percent. The index for unprocessed foodstuffs and feedstuffs also moved higher, advancing 0.9 percent. In contrast, prices for unprocessed nonfood materials less energy fell 4.2 percent. For the 12 months ended in May, the index for unprocessed goods for intermediate demand surged 48.5 percent.

Product detail: A major factor in the May increase in prices for unprocessed goods for intermediate demand was the index for natural gas, which jumped 39.7 percent. Prices for raw milk, coal, slaughter steers and heifers, hay and hayseeds, and raw cotton also rose. Conversely, the index for iron and steel scrap dropped 11.8 percent. Prices for crude petroleum and for slaughter hogs also decreased.

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for January 2022 through April 2022 have been revised to reflect the availability of late reports and corrections by respondents.

Services for intermediate demand: The index for services for intermediate demand moved up 0.6 percent in May, the seventh consecutive increase. Over half of the broad-based advance in May is attributable to a 0.5-percent rise in prices for services less trade, transportation, and warehousing for intermediate demand. The indexes for trade services for intermediate demand and for transportation and warehousing services for intermediate demand also moved higher, 0.6 percent and 1.0 percent, respectively. For the 12 months ended in May, prices for services for intermediate demand advanced 7.7 percent.

Product detail: Over one-third of the May rise in the index for services for intermediate demand can be traced to a 39.1-percent jump in prices for services related to securities brokerage and dealing (partial). The indexes for loan services (partial); machinery and equipment parts and supplies wholesaling; chemicals and allied products wholesaling; truck transportation of freight; and metals, minerals, and ores wholesaling also increased. In contrast, margins for fuels and lubricants retailing fell 21.7 percent. Prices for arrangement of freight and cargo transportation and for portfolio management also declined.

Table C. Monthly and 12-month percent changes in selected intermediate demand price indexes for services by commodity type, seasonally adjusted

Intermediate Demand by Production Flow

Stage 4 intermediate demand: Prices for stage 4 intermediate demand climbed 1.0 percent in May following a 0.8-percent rise in April. In May, the index for total goods inputs to stage 4 intermediate demand increased 1.3 percent, and prices for total services inputs moved up 0.7 percent. (See table D.) Advances in the indexes for steel mill products, services related to securities brokerage and dealing (partial), machinery and equipment parts and supplies wholesaling, gasoline, utility natural gas, and chemicals and allied products wholesaling outweighed decreases in prices for portfolio management; securities brokerage, dealing, and investment advice; and beef and veal. For the 12 months ended in May, the index for stage 4 intermediate demand jumped 11.5 percent.

Stage 3 intermediate demand: Prices for stage 3 intermediate demand moved up 1.8 percent in May after rising 2.5 percent in April. In May, the index for total goods inputs to stage 3 intermediate demand climbed 2.9 percent, and prices for total services inputs advanced 0.6 percent. Increases in the indexes for steel mill products; jet fuel; raw milk; diesel fuel; asphalt; and metals, minerals, and ores wholesaling outweighed falling prices for slaughter hogs, arrangement of freight and cargo transportation, and slaughter cows and bulls. For the 12 months ended in May, the index for stage 3 intermediate demand jumped 19.3 percent.

Stage 2 intermediate demand: The index for stage 2 intermediate demand rose 3.9 percent in May, the fifth straight advance. In May, prices for total goods inputs to stage 2 intermediate demand jumped 7.5 percent, while the index for total services inputs was unchanged. Increases in prices for gas fuels, ethanol, loan services (partial), steel mill products, coal, and water transportation of freight outweighed declines in the indexes for fuels and lubricants retailing, iron and steel scrap, and crude petroleum. For the 12 months ended in May, prices for stage 2 intermediate demand surged 25.6 percent, the largest rise since a 26.6-percent advance for the 12 months ended November 2021.

Stage 1 intermediate demand: The index for stage 1 intermediate demand moved up 1.6 percent in May, the same as in April. In May, prices for total goods inputs to stage 1 intermediate demand increased 2.3 percent, and the index for total services inputs rose 0.9 percent. Higher prices for steel mill products, utility natural gas, services related to securities brokerage and dealing (partial), diesel fuel, ethanol, and gasoline outweighed decreases in the indexes for iron and steel scrap; hardware, building materials, and supplies retailing; and guestroom rental. For the 12 months ended in May, prices for stage 1 intermediate demand climbed 16.1 percent.

The Producer Price Index for June 2022 is scheduled to be released on Thursday, July 14, 2022, at 8:30 a.m. (ET).

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2018, the PPI covered 71 percent of services as measured by 2012 Census revenue, and 31 percent of construction.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2017, final demand goods were about 33 percent of overall final demand, final demand services were roughly 65.5 percent, and final demand construction was about 1.5 percent of final demand. Within intermediate demand, coverage of services for intermediate demand resulted in about a 45 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table

from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4

intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see www.bls.gov/ppi/fd-id/ppi-intermediate-demand-by-production-flow-industry-stage-assignments.htm.

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the PPI includes medical services paid for by third parties. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at www.bls.gov/opub/mlr/.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In

addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted online via the BLS Internet Data Collection Facility (IDCF).

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to monthly revisions up to 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Information on these resampling efforts are noted in the *PPI News Release* and *PPI Detailed Report* in the months they occur.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2012 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2012 to December 2017, PPI weights were derived from 2007 shipment values. Industry indexes now are calculated under the 2017 NAICS structure utilizing 2012 value of shipment weights and 2007 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base

later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14.htm.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts

such as purchasing agreements or real estate leases. For more information, see *Price Adjustment Guide for Contracting Parties*, on the Web at: www.bls.gov/ppi/publications/price-adjustment-guide-for-contracting-parties.htm.

Seasonal adjustment is accomplished using X-13 ARIMA, a software package published by the U.S. Census Bureau. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of almost 400 seasonally adjusted series, only 42 were subject to intervention in 2018.

For more information relating to seasonal adjustment methods, see “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*, and “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed*

Report. There were more than 4 million instances of PPI data and tables being downloaded from the BLS website during the 12 months ended December 31, 2017.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). On this page, under the tab labeled “Featured PPI databases” links provide the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpufd4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu”. After the prefix, there are 12

numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

*Industry-product code,
discontinued NAICS series*

ndu212231212231
ndu2122312122312
ndu212231212231214

Provides data for

Lead and zinc ore mining
Lead, zinc concentrates
Lead concentrates

- **Text Files** are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation, such as seasonal factor tables and relative importance tables. The text files can be accessed at **download.bls.gov/** or directly from links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

Industry Data	/pub/time.series/pc
Industry Data - Discontinued (NAICS basis)	/pub/time.series/nd
(SIC basis)	/pub/time.series/pd
Commodity Data (incl. FD-ID)	/pub/time.series/wp
Commodity Data – Discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov. If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Table 1. Producer price index percentage changes and weights for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued
 [May 2022]

Grouping	Commodity code		Relative Importance Dec. 2021 ¹	Unadjusted 12-month percent change ² May 2021 to May 2022 ^P	Seasonally adjusted 1-month percent change ²				
	Group code	Item code			Dec. to Jan.	Jan. to Feb. ^P	Feb. to Mar. ^P	Mar. to Apr. ^P	Apr. to May ^P
Final demand less foods, food and nonalcoholic beverages for immediate consumption, and energy ⁵	FD	49103	87.780	8.4	0.9	0.6	1.2	0.2	0.4
Final demand less foods and energy ⁵	FD	49104	88.285	8.3	0.9	0.6	1.2	0.2	0.5
Final demand less foods and food and nonalcoholic beverages for immediate consumption ⁵	FD	49105	93.752	10.8	1.1	1.1	1.6	0.3	0.8
Final demand less foods ⁵	FD	49106	94.257	10.5	1.1	1.0	1.5	0.3	0.8
Final demand less energy.....	FD	49107	94.028	8.6	1.0	0.6	1.2	0.3	0.4
Final demand less trade services.....	FD	49108	79.566	10.1	1.1	0.9	1.5	0.6	0.9
Final demand less distributive services ⁶	FD	49109	76.283	9.5	1.1	0.9	1.4	0.6	0.8
Final demand goods less energy.....	FD	49111	27.155	10.4	1.1	1.0	1.4	1.2	0.5
Final demand goods less foods.....	FD	49112	27.384	17.3	1.6	2.3	2.4	1.2	1.7
Final demand services less trade services.....	FD	49113	44.697	5.0	0.7	-0.1	0.9	0.0	0.4
Final demand distributive services ⁶	FD	49114	23.717	14.8	1.4	1.6	2.1	-0.2	0.8
Final demand goods plus final demand distributive services ⁶	FD	49115	56.844	15.9	1.5	2.0	2.3	0.6	1.2
Final demand less foods, energy, and trade services ⁵	FD	49116	67.851	6.8	0.8	0.2	1.0	0.4	0.5
Private and government purchased capital equipment.....	FD	49117	6.553	8.8	1.0	0.9	0.8	1.1	0.6
Private and government purchased capital investment services.....	FD	49118	7.747	13.5	2.3	1.5	1.0	-0.3	1.5
Total private and government purchased capital investment.....	FD	49119	14.300	12.1	1.9	1.2	0.9	0.7	1.0
Total finished ³	FD	49201	78.213	9.9	1.1	1.0	1.4	0.1	0.7
Total finished less foods, food and nonalcoholic beverages for immediate consumption, and energy ^{3, 5}	FD	49202	68.515	7.9	1.0	0.5	1.1	0.1	0.4
Total finished less foods and energy ^{3, 5}	FD	49203	69.015	7.7	0.9	0.5	1.1	0.0	0.4
Total finished less foods and food and nonalcoholic beverages for immediate consumption ⁵	FD	49204	73.288	9.9	1.1	1.0	1.4	0.0	0.7
Total finished less foods ^{3, 5}	FD	49205	73.788	9.8	1.1	1.0	1.4	0.0	0.7
Total finished less energy ³	FD	49206	73.440	8.1	1.0	0.6	1.1	0.1	0.4
Finished goods ³	FD	49207	21.282	16.7	1.6	2.5	2.0	0.8	1.6
Finished goods less energy ³	FD	49208	16.509	10.2	1.1	1.1	1.1	1.1	0.6
Finished goods, excluding foods ^{3, 5}	FD	49209	16.857	17.4	1.6	2.7	2.0	0.6	2.0
Finished services ³	FD	49210	55.798	7.2	0.9	0.4	1.2	-0.3	0.3
Private capital investment services.....	FD	49211	7.354	13.5	2.3	1.4	1.0	-0.2	1.5
Finished distributive services ^{3, 6}	FD	49212	19.709	14.3	1.3	1.6	2.1	-0.3	0.5
Finished services less trade services ³	FD	49213	38.249	4.6	0.7	-0.1	0.9	-0.1	0.3
Finished services less distributive services ^{3, 6}	FD	49214	36.089	3.6	0.6	-0.2	0.7	-0.2	0.1
Total private capital investment (goods, services, and construction).....	FD	49215	14.123	12.4	1.9	1.2	0.9	0.7	1.1
Finished goods plus finished distributive services ^{3, 6}	FD	49216	40.991	15.5	1.5	2.1	2.0	0.3	1.1
Total exports.....	FD	49301	14.151	12.6	1.1	1.1	2.1	1.2	1.0
Goods for export.....	FD	49302	8.349	13.7	1.2	1.3	2.5	1.9	0.7
Services for export.....	FD	49303	5.802	11.0	0.9	0.8	1.5	0.3	1.5
Total government purchases.....	FD	49401	7.633	15.0	1.9	1.5	2.5	1.6	1.3
Government purchased goods.....	FD	49402	3.496	22.8	2.7	2.7	4.3	2.5	2.1
Government purchased services.....	FD	49403	3.531	7.2	0.9	0.5	1.0	0.2	0.6
Total government purchased capital investment (goods, services, construction).....	FD	49404	1.916	10.4	1.6	0.8	0.9	1.0	0.5
Personal consumption.....	FD	49501	64.090	9.5	0.9	1.0	1.5	0.0	0.6
Personal consumption goods (finished consumer goods).....	FD	49502	15.646	19.4	1.8	3.0	2.5	0.6	1.9
Personal consumption goods less energy.....	FD	49503	10.873	10.6	1.1	1.2	1.3	1.1	0.5
Personal consumption goods less foods.....	FD	49504	11.221	21.5	1.9	3.5	2.6	0.3	2.6
Personal consumption nondurable goods less foods.....	FD	49508	8.834	24.9	2.1	4.2	3.1	0.2	3.1
Personal consumption services.....	FD	49505	48.444	6.3	0.7	0.3	1.2	-0.3	0.1

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

² All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

³ PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

⁵ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁶ Distributive services include transportation, warehousing, and trade of goods.

⁷ Includes intermediate trade, transportation, and warehousing services.

⁸ Includes crude petroleum.

⁹ Excludes crude petroleum.

p Preliminary

"-" Data not available.

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² Seasonal tests did not indicate the presence of seasonality. Data shown is not seasonally adjusted.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

p Preliminary

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Intermediate Demand by Production Flow								
Stage 4 Intermediate Demand								
Stage 4 intermediate demand.....		ID5	4	140.113	140.949	142.555	143.748	145.207
Inputs to stage 4 goods producers.....		ID5	41	139.954	140.884	142.787	144.308	146.250
Goods.....		ID5	411	135.123	135.901	137.541	139.479	141.454
Foods.....		ID5	4111	143.558	147.150	154.848	159.123	161.021
Energy.....		ID5	4112	149.466	159.058	164.619	169.966	177.523
Goods excluding foods and energy.....		ID5	4113	133.772	134.050	134.747	136.305	138.244
Services.....		ID5	412	156.126	157.496	160.167	160.561	162.447
Trade services.....		ID5	4123	166.555	168.202	171.159	171.293	173.520
Transportation and warehousing services.....		ID5	4122	129.028	130.417	134.959	137.896	141.256
Transportation of passengers.....		ID5	41221	109.054	112.853	125.378	128.470	132.181
Transportation and warehousing of goods.....		ID5	41222	141.483	142.492	145.772	148.873	152.387
Services less trade, transportation, and warehousing.....		ID5	4121	121.753	122.036	123.010	123.626	123.731
Inputs to stage 4 services producers.....		ID5	42	135.971	136.125	136.810	137.823	138.741
Goods.....		ID5	421	137.855	139.561	141.655	143.418	144.715
Foods.....		ID5	4211	145.873	148.846	150.786	152.907	152.104

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[May 2022, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Jan. 2022	Feb. 2022 ^P	Mar. 2022 ^P	Apr. 2022 ^P	May 2022 ^P
Energy.....		ID5	4212	131.438	133.278	136.643	139.179	141.988
Goods excluding foods and energy.....		ID5	4213	138.392	139.653	141.112	142.356	143.459
Services.....		ID5	422	135.157	134.748	134.922	135.659	136.439
Trade services.....		ID5	4223	146.694	148.505	152.232	152.147	154.397
Transportation and warehousing services.....		ID5	4222	141.029	140.433	143.359	146.581	147.055
Transportation of passengers.....		ID5	42221	108.811	112.568	124.949	128.014	131.684
Transportation and warehousing of goods.....		ID5	42222	147.360	145.961	147.158	150.417	150.304
Services less trade, transportation, and warehousing.....		ID5	4221	132.483	131.798	131.223	131.816	132.428
Construction.....		ID5	423	134.006	135.414	137.063	140.048	140.885
Inputs to stage 4 construction producers.....		ID5	43	155.273	158.606	163.157	164.262	166.690
Goods.....		ID5	431	158.611	162.811	166.918	168.017	170.871
Energy.....		ID5	4312	156.234	175.492	190.685	194.094	207.659
Goods excluding foods and energy.....		ID5	4313	162.534	165.363	168.484	169.383	171.259
Services.....		ID5	432	146.586	147.841	153.427	154.539	155.944
Trade services.....		ID5	4323	165.966	167.833	177.544	178.679	180.011
Transportation and warehousing services.....		ID5	4322	146.849	149.253	155.695	158.672	163.063
Transportation of passengers.....		ID5	43221	113.735	117.686	130.711	133.929	137.788
Transportation and warehousing of goods.....		ID5	43222	148.476	150.850	157.148	160.134	164.561
Services less trade, transportation, and warehousing.....		ID5	4321	123.766	123.964	124.866	125.289	125.711
Stage 3 Intermediate Demand								
Stage 3 intermediate demand.....		ID5	3	143.617	145.634	150.110	153.869	156.690
Inputs to stage 3 goods producers.....		ID5	31	159.883	161.767	166.670	171.578	175.642

Total construction inputs to stage 2 intermediate demand.....	04/10	ID5	9213	132.896	134.292	135.928	138.888	139.717
Total foods inputs to stage 2 intermediate demand.....	04/10	ID5	9214	156.647	164.570	172.398	175.789	177.085
Total energy goods inputs to stage 2 intermediate demand.....	04/10	ID5	9215	101.958	120.284	116.089	127.214	147.183
Total goods less foods and energy inputs to stage 2 intermediate demand.....	04/10	ID5	9216	138.320	139.474	143.730	145.774	145.773
Total goods inputs to stage 1 intermediate demand.....	04/10	ID5	9111	129.290	131.370	135.668	138.990	142.175
Total services inputs to stage 1 intermediate demand.....	04/10	ID5	9112	136.452	136.768	139.604	140.416	141.638

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[May 2022, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Jan. 2022	Feb. 2022 ^p	Mar. 2022 ^p	Apr. 2022 ^p	May 2022 ^p
Total construction inputs to stage 1 intermediate demand.	04/10	ID5	9117	132.896	134.292	135.928	138.888	139.717
Total foods inputs to stage 1 intermediate demand.	04/10	ID5	9114	146.952	150.324	163.112	169.009	170.048
Total energy goods inputs to stage 1 intermediate demand.	04/10	ID5	9115	134.743	143.062	153.828	162.277	169.711
Total goods less foods and energy inputs to stage 1 intermediate demand.	04/10	ID5	9116	125.015	125.440	127.451	129.249	131.432

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

⁴ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁵ Distributive services include transportation, warehousing, and trade of goods.

⁶ Includes intermediate trade, transportation, and warehousing services.

⁷ Includes crude petroleum.

⁸ Excludes crude petroleum.
