## REGIONAL AND STATE UNEMPLOYMENT, 2006 ANNUAL AVERAGES

Annual average unemployment rates declined between 2005 and 2006 in 43 states and the District of Columbia and in all 4 regions, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Employment-population ratios rose in 41 states and the District of Columbia and in all 4 regions. The U.S. jobless rate fell by 0.5 percentage point to 4.6 percent in 2006, while the national employmentpopulation ratio increased by 0.4 percentage point to 63.1 percent.

## Regional Unemployment

All four regions registered statistically significant declines in their jobless rates from 2005. (See table 1.) The West recorded the largest unemployment rate decrease ( -0.6 percentage point), and the South and Midwest had the next largest declines ( -0.5 and -0.4 percentage point, respectively). The South reported the lowest jobless rate in 2006, 4.5 percent, while the Midwest recorded the highest rate for the second consecutive year, 5.0 percent. The Midwest and South were the only two regions to register jobless rates that were significantly different from that of the nation. The range between the highest and lowest regional unemployment rates edged down to 0.5 percentage point from 0.6 point in 2005 . The last time the range between regional unemployment rates was this small was in 1990.

Eight of the nine geographic divisions-all but New England-posted statistically significant over-the-year unemployment rate declines in 2006. The Mountain and West South Central reported the largest rate decreases ( -0.7 percentage point each). The divisions with the next largest declines were the East North Central, East South Central, Pacific, and West North Central ( -0.5 percentage point each). Six divisions had jobless rates that were significantly different from that of the nation. Three divisions reported rates that were measurably lower than that of the U.S.-the Mountain at 3.9 percent and South Atlantic and West North Central at 4.1 percent each. Three divisions recorded rates that were higher than the U. S. average-the East North Central at 5.3 percent, East South Central at 5.1 percent, and Pacific at 4.9 percent. The jobless rate in the Pacific division was the lowest in its series. (All region, division, and state series begin in 1976.)

## State Unemployment

Twenty-five states posted unemployment rate decreases from 2005 to 2006 that were statistically significant, and no state registered a significant rate increase over the year. The states with the largest rate declines were Louisiana ( -2.7 percentage points), Illinois and Utah ( -1.2 points each), New Mexico ( -1.1 points), and Mississippi ( -1.0 point). Twenty additional states reported significant over-the-year rate decreases, ranging from -0.4 to -0.9 percentage point. The remaining 25 states and the District of Columbia recorded annual average unemployment rates for 2006 that were not appreciably different from those
of 2005, even though some had changes that were at least as large numerically as those with statistically significant changes. (See tables A and 1 and chart 1.)

In 2006, Hawaii again reported the lowest unemployment rate among the states, 2.4 percent. Utah had the next lowest rate, 2.9 percent, followed by Nebraska and Virginia at 3.0 percent each. Twelve additional states registered annual average unemployment rates below 4.0 percent. Altogether, 20 states had jobless rates that were significantly below the U.S. rate, while 12 states and the District of Columbia recorded rates that were appreciably above it. The rates for 18 states were not significantly different from the overall U. S. rate. The states with the highest unemployment rates in 2006 were Michigan at 6.9 percent, Mississippi at 6.8 percent, Alaska at 6.7 percent, and South Carolina at 6.5 percent. The District of Columbia reported the next highest rate, 6.0 percent. Eight states posted the lowest annual jobless rates in their seriesAlabama ( 3.6 percent), Florida ( 3.3 percent), Idaho ( 3.4 percent), Louisiana ( 4.0 percent), Montana ( 3.2 percent), New Mexico ( 4.2 percent), Utah ( 2.9 percent), and West Virginia ( 4.9 percent). (See table B and chart 2.)

## Regional Employment-Population Ratios

In 2006, all four regions registered statistically significant increases in their employment-population ratios-the proportion of the civilian noninstitutional population 16 years and over with a job. The Midwest and South posted the largest increases ( +0.5 percentage point each). The Midwest at 65.0 percent, was the only region to report an employment-population ratio that was significantly higher than that of the nation (63.1 percent), while the South at 62.3 percent, and the Northeast at 62.2 percent, had appreciably lower ratios.

Among the nine geographic divisions, four posted over-the-year changes to employment-population ratios that were statistically significant-all of which were increases. The Mountain division registered the largest increase $(+0.9$ percentage point), followed by the South Atlantic ( +0.7 point), East North Central $(+0.6$ point), and East South Central ( +0.5 point). In 2006, four divisions recorded employment-population ratios that were measurably higher than that of the U.S. and four had lower ratios. The West North Central again reported the highest proportion of employed persons, 68.0 percent, while the East South Central continued to have the lowest proportion, 59.4 percent.

## State Employment-Population Ratios

Twenty-one states posted significant increases in their proportions of employed persons from 2005, and one state had a significant decline. The states with the largest employment-population ratio increases in 2006 were Illinois and Utah ( +1.6 percentage points each) and Colorado ( +1.3 points). Eight additional states recorded over-the-year increases of at least 1.0 percentage point, all of which were significant. Mississippi was the only state that registered a significant decrease in its employment-population ratio in 2006 ( -0.7 percentage point). Twenty-eight states and the District of Columbia recorded employment-population ratios that were not appreciably different from those of the previous year. (See tables $C$ and 2.)

In 2006, 24 states reported employment-population ratios that were significantly higher than that of the U.S. and 16 states recorded appreciably lower ratios. The remaining states and the District of Columbia had rates that were essentially the same as the U.S. rate. Among the states with the highest employmentpopulation ratios, five posted rates over 70.0 percent in 2006: Minnesota, 70.6 percent; Nebraska, 70.4 percent; North Dakota and South Dakota, 70.3 percent each; and Utah, 70.1 percent. Among the 16 states with ratios that were significantly lower than that of the nation, 5 states had ratios below 60.0 percent-West Virginia, 52.8 percent; Mississippi, 56.0 percent; Louisiana, 59.2 percent; Kentucky, 59.3 percent; and Alabama, 59.9 percent. (See table D and chart 3.)

Note
All subnational estimates presented in this release were derived from updated time-series models with real-time benchmarking to national Current Population Survey (CPS) estimates. Subnational data reflect revised population controls and model reestimation. Historical data were revised back to 2002. Data for regions, divisions, states, and the District of Columbia are available back to 1976.

Consistent with the long-standing practice used in this release and the current practice in the monthly Regional and State Employment and Unemployment releases, the introductory section of this release highlights the direction of the movements in regional and state unemployment rates and employment-population ratios regardless of their statistical significance. The remainder of the analysis, particularly in comparisons with the U.S. and over-the-year changes, reflects model-based error measures. BLS uses a 90-percent confidence level in determining whether changes or differences in subnational unemployment rates and employment-population ratios are statistically significant. Data for Puerto Rico are derived from a monthly household survey similar to the CPS and error measures are not available. Model-based error measures are available on the BLS Web site at http://www.bls.gov/lau/lastderr.htm.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

' Error ranges are shown at the 90 -percent confidence level and are based on unrounded data. NA = Data not available.
NOTE: Data refer to place of residence. Unemployment rates are based on unrounded levels.

Data for subnational areas reflect revised population controls and model reestimation. As a result, they will not add to U.S. totals. Data for Puerto Rico are derived from a monthly household survey similar to the Current Population Survey.
