## UNION MEMBERS IN 2003

In 2003, 12.9 percent of wage and salary workers were union members, down from 13.3 percent in 2002, the U.S. Department of Labor's Bureau of Labor Statistics reported today. The number of persons belonging to a union fell by 369,000 over the year to 15.8 million in 2003 . The union membership rate has steadily declined from a high of 20.1 percent in 1983, the first year for which comparable union data are available. Some highlights from the 2003 data are:

- Men were more likely to be union members than women.
- Blacks were more likely to be union members than were whites, Asians, and Hispanics or Latinos.
- Nearly 4 in 10 government workers were union members in 2003, compared with less than 1 in 10 workers in private-sector industries.
- Nearly two-fifths of workers in education, training, and library occupations and in protective service occupations were union members in 2003. Protective service occupations include fire fighters and police officers.

## Membership by Industry and Occupation

In 2003, workers in the public sector had a union membership rate more than four times that of pri-vate-sector employees, 37.2 percent compared with 8.2 percent. The unionization rate for government workers has held steady since 1983. The rate for private industry workers has fallen by about half over the same time period. Within government, local government workers had the highest union membership rate, 42.6 percent. This group includes the heavily unionized occupations of teachers, police officers, and fire fighters. Among major private industries, transportation and utilities had the highest union membership rate, at 26.2 percent. Construction ( 16.0 percent), information industries ( 13.6 percent), and manufacturing ( 13.5 percent) also had higher-than-average rates. Agriculture and related industries had the lowest unionization rate in 2003-1.6 percent. (See table 3.)

Among occupational groups, education, training, and library occupations (37.7 percent) and protective service workers ( 36.1 percent) had the highest unionization rates in 2003. Natural resources, construction, and maintenance workers and production, transportation, and material moving occupations also had higher-than-average union membership rates at 19.2 percent and 18.7 percent, respectively. Among the major occupational groups, sales and office occupations had the lowest unionization rate- 8.2 percent. (See table 3.)

## Demographic Characteristics of Union Members

In 2003, union membership rates were higher for men (14.3 percent) than for women (11.4 percent). The gap between men's and women's rates has narrowed considerably since 1983, when the rate for men was 10 percentage points higher than the rate for women.

Blacks were more likely to be union members ( 16.5 percent) than were whites ( 12.5 percent), Asians (11.4 percent), or Hispanics (10.7 percent). Union membership rates were highest among workers 45 to 54 years old. Full-time workers were more than twice as likely as part-time workers to be union members. (See table 1.)

## Union Representation of Nonmembers

About 1.7 million wage and salary workers were represented by a union on their main job in 2003, while not being union members themselves. (See table 1.) About half of these workers were employed in government. (See table 3.)

## Earnings

In 2003, full-time wage and salary workers who were union members had median usual weekly earnings of $\$ 760$, compared with a median of $\$ 599$ for wage and salary workers who were not represented by unions. (See table 2.) The difference reflects a variety of influences in addition to coverage by a collective bargaining agreement, including variations in the distributions of union members and nonunion employees by occupation, industry, firm size, or geographic region. (For a discussion of the problem of differentiating between the influence of unionization status and the influence of other worker characteristics on employee earnings, see "Measuring union-nonunion earnings differences," Monthly Labor Review, June 1990.)

## Union Membership by State

In 2003, 33 states reported lower union membership rates, while 15 states and the District of Columbia registered increased rates. Two states reported no change in their union membership rates from 2002 to 2003. Twenty-nine states had union membership rates below that of the U.S., while 21 states and the District of Columbia had higher rates. All states in the Middle Atlantic and Pacific divisions again had union membership rates above the national average of 12.9 percent, while all states in the East South Central and West South Central divisions continued to have rates below it. (See table 5 and chart 1.)

Four states had union membership rates over 20 percent in 2003-New York ( 24.6 percent), Hawaii ( 23.8 percent), Alaska ( 22.3 percent), and Michigan ( 21.9 percent). This is the same rank order as in both 2001 and 2002. All four states have had rates above 20 percent every year since data became regularly available in 1995. North Carolina and South Carolina continued to report the lowest union membership rates, 3.1 and 4.2 percent, respectively. These two states have had the lowest union membership rates each year since the state series became available.

The largest numbers of union members lived in California ( 2.4 million), New York ( 1.9 million), and Illinois ( 1.0 million). About half ( 7.9 million) of the 15.8 million union members in the U.S. lived in six states (California, New York, Illinois, Michigan, Ohio, and Pennsylvania), although these states accounted for just over one-third of wage and salary employment nationally.

The number of union members in a state depends on both its union membership rate and the size of its employed workforce. Texas had only about one-fourth as many union members as New York, despite having 1.2 million more wage and salary employees.

## Technical Note

The estimates in this release are obtained from the Current Population Survey (CPS), which provides the basic information on the labor force, employment, and unemployment. The survey is conducted monthly for the Bureau of Labor Statistics by the U.S. Census Bureau from a scientifically selected national sample of about 60,000 households. The union membership and earnings data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers. Excluded are all selfemployed workers.

Data for 2002 presented in this release have been revised to incorporate changes to the class of worker status associated with the introduction of the 2002 Census industry and occupational classification systems into the Current Population Survey. In addition, the data for 2003 reflect revised CPS population controls introduced in January 2003. For a discussion of the revised population controls and the impact that their introduction had on CPS data, see "Revisions to the Current Population Survey Effective in January 2003" in the February 2003 issue of Employment and Earnings and available at http://www.bls.gov/cps/rvcps03.pdf on the BLS Web site.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, TDD message referral phone number: 1-800-877-8339.

## Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending upon the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the 90 -percent level of confidence.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

For a full discussion of the reliability of data from the CPS and information on estimating standard errors, see the "Explanatory

Notes and Estimates of Error" section of Employment and Earnings.

## Definitions

The principal definitions used in this release are described briefly below.

Union members. Data refer to members of a labor union or an employee association similar to a union.

Represented by unions. Data refer to union members, as well as workers who have no union affiliation but whose jobs are covered by a union or an employee association contract.

Usual weekly earnings. Data represent earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received (at the main job in the case of multiple jobholders). Prior to 1994, respondents were asked how much they usually earned per week. Since January 1994, respondents have been asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, monthly, annually, other) and how much they usually earn in the reported time period. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months.

Median earnings. The median is the amount which divides a given earnings distribution into two equal groups, one having earnings above the median and the other having earnings below the median.

The estimating procedure places each reported or calculated weekly earnings value into $\$ 50$-wide intervals which are centered around multiples of $\$ 50$. The actual value is estimated through the linear interpolation of the interval in which the median lies.

Wage and salary workers. Workers who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in both the private and public sectors but, for the purposes of the union membership and earnings series, excludes all self-employed persons, regardless of whether or not their businesses are incorporated.

Full-time workers. Workers who usually work 35 hours or more per week at their sole or principal job.

Part-time workers. Workers who usually work fewer than 35 hours per week at their sole or principal job.

Hispanic or Latino ethnicity. Refers topersons who identified themselves in theenumeration process as being Spanish, Hispanic, or Latino. Persons whose ethnicity is identified as His panic or Latino may be of any race.

[^0]jobholders.
NOTE: Data for 2002 have been revised to incorporate changes to the class of worker status associated with the introduction of the 2002 Census industry and occupational classification systems into the Current Population Survey. Beginning in January 2003, data reflect revised population controls used in the household survey. Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as "Hispanic or Latino" may be of any race and, therefore, are classified by ethnicity as well as race. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

[^1]2002 Census industry and occupational classification systems into the Current Population Survey. Beginning in January 2003, data reflect revised population controls used in the household survey. Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as "Hispanic or Latino" may be of any race and, therefore, are classified by ethnicity as well as race. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

Table 3. Union affiliation of employed wage and salary workers by occupation and industry
(Numbers in thousands)

| Occupation and industry | 2002 |  |  |  |  | 2003 |  |  |  |  |

${ }^{1}$ Data refer to members of a labor union or an employee association similar to a union.
2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

3 Data not shown where base is less than 50,000.
4 Includes other industries, not shown separately.
NOTE: Data for 2002 have been revised to incorporate changes to the class of worker status associated with the introduction of the 2002 Census
industry and occupational classification systems into the Current Population Survey. Beginning in January 2003, data reflect revised population controls used in the household survey. Occupations and industries reflect the introduction of the 2002 Census occupational and industry classification systems derived from the 2000 Standard Occupational Classification system and the 2002 North American Industry Classification System into the Current Population Survey. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

[^3]the class of worker status associated with the introduction of the 2002 Census industry and occupational classification systems into the Current Population Survey. Beginning in January 2003, data reflect revised population controls used in the household survey. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.
Chart 1. Union Membership rates by state, 2003 annual averages
(U.S. rate $=12.9$ percent)

[^0]:    1 Data refer to members of a labor union or an employee association similar to a union.
    2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

    3 Beginning in 2003, persons who selected this race group only; persons who selected more than one race group are not included. Prior to 2003, persons who reported more than one race group were included in the group they identified as their main race.

    4 The distinction between full- and part-time workers is based on hours usually worked. These data will not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple
