## UNION MEMBERS IN 2004

In 2004, 12.5 percent of wage and salary workers were union members, down from 12.9 percent in 2003, the U.S. Department of Labor's Bureau of Labor Statistics reported today. The union membership rate has steadily declined from a high of 20.1 percent in 1983, the first year for which comparable union data are available. Some highlights from the 2004 data are:

- About 36 percent of government workers were union members in 2004, compared with about 8 percent of workers in private-sector industries.
- Two occupational groups-education, training, and library occupations and protective service occupa-tions-had the highest unionization rates in 2004, at about 37 percent each. Protective service occupations include fire fighters and police officers.
- Men were more likely to be union members than women.
- Black workers were more likely to be union members than were white, Asian, or Hispanic or Latino workers.

## Membership by Industry and Occupation

In 2004, workers in the public sector had a union membership rate more than four times that of privatesector employees. At 36.4 percent, the unionization rate for government workers was down slightly from 37.2 percent a year earlier. The rate for private industry workers, at 7.9 percent in 2004, was about half what it had been in 1983. Within the public sector, local government workers had the highest union membership rate, 41.3 percent. This group includes several heavily unionized occupations, such as teachers, police officers, and fire fighters. Among major private industries, transportation and utilities had the highest union membership rate, at 24.9 percent. Construction ( 14.7 percent), information industries ( 14.2 percent), and manufacturing ( 12.9 percent) also had higher-than-average rates. Within the information industry, telecommunications had a 22.4 percent union membership rate. Financial activities had the lowest unionization rate in 2004-2.0 percent. (See table 3.)

Among occupational groups, education, training, and library occupations ( 37.6 percent) and protective service workers ( 37.3 percent) had the highest unionization rates in 2004. Construction and extraction occupations ( 19.6 percent), installation, maintenance, and repair occupations (19.4 percent), transportation and material moving occupations ( 18.8 percent), community and social services occupations (17.4 percent), and production occupations ( 16.3 percent) also had higher-than-average rates. Farming, fishing, and forestry occupations ( 3.1 percent) and sales and related occupations ( 3.6 percent) had the lowest unionization rates. (See table 3.)

## Demographic Characteristics of Union Members

In 2004, the union membership rate was higher for men (13.8 percent) than for women (11.1 percent). The gap between their rates has narrowed considerably since 1983, when the rate for men was 10 percentage points higher than the rate for women. This narrowing occurred because the union membership rate for men declined more rapidly than the rate for women over the period. (See table 1.)

Blacks were more likely to be union members (15.1 percent) than were whites (12.2 percent), Asians (11.4 percent), or Hispanics or Latinos (10.1 percent). Among age groups, union membership rates were highest among workers 45 to 54 years old ( 17.0 percent) and were lowest among those ages 16 to 24 ( 4.7 percent). Full-time workers were more than twice as likely as part-time workers to be union members, 13.9 and 6.4 percent, respectively. (See table 1.)

## Union Representation of Nonmembers

About 1.6 million wage and salary workers were represented by a union on their main job in 2004, while not being union members themselves. (See table 1.) About half of these workers were employed in government. (See table 3.)

## Earnings

In 2004, full-time wage and salary workers who were union members had median usual weekly earnings of $\$ 781$, compared with a median of $\$ 612$ for wage and salary workers who were not represented by unions. (See table 2.) The difference reflects a variety of influences in addition to coverage by a collective bargaining agreement, including variations in the distributions of union members and nonunion employees by occupation, industry, firm size, or geographic region. (For a discussion of the problem of differentiating between the influence of unionization status and the influence of other worker characteristics on employee earnings, see "Measuring union-nonunion earnings differences," Monthly Labor Review, June 1990.)

## Union Membership by State

In 2004, 32 states had union membership rates below that of the U.S. average, 12.5 percent, while 17 states and the District of Columbia had higher rates. All states in the Middle Atlantic and Pacific divisions again reported union membership rates above the national average, while all states in the East South Central and West South Central divisions continued to have rates below it. The states in the Mountain division also recorded union membership rates at or below that of the U.S. (See table 5 and chart 1.)

Four states had union membership rates over 20 percent in 2004-New York ( 25.3 percent), Hawaii ( 23.7 percent), Michigan ( 21.6 percent), and Alaska ( 20.1 percent). All four states have had rates above 20 percent every year since data became regularly available in 1995. Four states reported union membership rates below 5 percent in 2004. North Carolina and South Carolina continued to record the lowest union membership rates, 2.7 and 3.0 percent, respectively. These two states have had the lowest union membership rates each year since the state series became available. Arkansas and Mississippi had the next lowest union membership rates, 4.8 percent each in 2004.

The largest numbers of union members lived in California ( 2.4 million) and New York ( 2.0 million). About half ( 7.8 million) of the 15.5 million union members in the U.S. lived in six states (California, New York, Michigan, Illinois, Pennsylvania, and Ohio), although these states accounted for just over one-third of wage and salary employment nationally.

The number of union members in a state depends on both its employment level and its union membership rate. Texas (the second largest state in terms of the number of wage and salary workers) had less than onefourth as many union members as New York (the third largest), despite having nearly 1.2 million more wage and salary employees. Similarly, Florida (the fourth largest state) and Wisconsin (the sixteenth) had the same number of union members, even though Florida's wage and salary employment level was more than two and one-half times that of Wisconsin.

## Technical Note

The estimates in this release are obtained from the Current Population Survey (CPS), which provides the basic information on the labor force, employment, and unemployment. The survey is conducted monthly for the Bureau of Labor Statistics by the U.S. Census Bureau from a scientifically selected national sample of about 60,000 households. The union membership and earnings data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers. All selfemployed workers are excluded.

Union membership data for 2004 are not strictly comparable with data for 2003 and earlier years because of the introduction in January 2004 of revised population controls used in the CPS. The effect of the revised population controls on the union membership estimates is unknown. However, the effect of the new controls on the monthly CPS estimates was to decrease the January 2004 employment level by 409,000 and the unemployment level by 27,000 relative to the December 2003 level. The updated controls had little or no effect on unemployment rates and other ratios. For additional information, see "Adjustments to Household Survey Population Estimates in January 2004" in the February 2004 issue of Employment and Earnings, available on the Internet at http://www.bls.gov/cps/ cps04adj.pdf.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, TDD message referral phone number: 1-800-877-8339.

## Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending upon the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the 90percent level of confidence.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

For a full discussion of the reliability of data from the CPS and information on estimating standard errors, see the
"Explanatory Notes and Estimates of Error" section of Employment and Earnings.

## Definitions

The principal definitions used in this release are described briefly below.

Union members. Data refer to members of a labor union or an employee association similar to a union.

Represented by unions. Data refer to union members, as well as workers who have no union affiliation but whose jobs are covered by a union or an employee association contract.

Usual weekly earnings. Data represent earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received (at the main job in the case of multiple jobholders). Prior to 1994, respondents were asked how much they usually earned per week. Since January 1994, respondents have been asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, monthly, annually, other) and how much they usually earn in the reported time period. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half of the weeks worked during the past 4 or 5 months.

Median earnings. The median is the amount which divides a given earnings distribution into two equal groups, one having earnings above the median and the other having earnings below the median. The estimating procedure places each reported or calculated weekly earnings value into $\$ 50$-wide intervals which are centered around multiples of $\$ 50$. The actual value is estimated through the linear interpolation of the interval in which the median lies.

Wage and salary workers. Workers who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in both the private and public sectors, but, for the purposes of the union membership and earnings series, excludes all self-employed persons, regardless of whether or not their businesses are incorporated.

Full-time workers. Workers who usually work 35 hours or more per week at their sole or principal job.

Part-time workers. Workers who usually work fewer than 35 hours per week at their sole or principal job.

Hispanic or Latino ethnicity. Refers to persons who identified themselves in the enumeration process as being Spanish, Hispanic, or Latino. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

[^0]NOTE: Beginning in January 2004, data reflect revised population controls used in the household survey. Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as "Hispanic or Latino" may be of any race and, therefore, are classified by ethnicity as well as race. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

[^1]groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as "Hispanic or Latino" may be of any race and, therefore, are classified by ethnicity as well as race. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

${ }^{1}$ Data refer to members of a labor union or an employee association similar to a union.
2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

3 Data not shown where base is less than 50,000.

4 Includes other industries, not shown separately.
NOTE: Beginning in January 2004, data reflect revised population controls used in the household survey. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

Table 5. Union affiliation of employed wage and salary workers by state
(Numbers in thousands)

${ }^{1}$ Data refer to members of a labor union or an employee association similar to a union.

2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

NOTE: Beginning in January 2004, data reflect revised population controls used in the household survey. Data refer to the sole or principal job of full- and part-time workers. Excluded are all self-employed workers regardless of whether or not their businesses are incorporated.

[^0]:    1 Data refer to members of a labor union or an employee association similar to a union.
    2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

    3 The distinction between full- and part-time workers is based on hours usually worked. These data will not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple jobholders.

[^1]:    1 Data refer to members of a labor union or an employee association similar to a union.
    ${ }^{2}$ Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.
    NOTE: Beginning in January 2004, data reflect revised population controls used in the household survey. Estimates for the above race

[^2]:    ${ }^{1}$ Data refer to members of a labor union or an employee association similar to a union.

    2 Data refer to members of a labor union or an employee association similar to a union as well as workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.
