## WORK EXPERIENCE OF THE POPULATION IN 2005

A total of 154.3 million persons worked at some point during 2005, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The proportion of workers who worked full time, year round was 67.5 percent, a higher proportion than in 2004 ( 66.8 percent). The number of persons who experienced some unemployment in 2005 was 14.5 million, down from 15.1 million a year earlier. (See tables 1 and 3.)

These data are based on information collected in the Annual Social and Economic Supplement (ASEC) to the Current Population Survey (CPS). The CPS is a monthly survey conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. The ASEC collects information on employment and unemployment experienced during the prior calendar year. Additional information about the CPS and the ASEC, including concepts and definitions, is provided in the Technical Note. Highlights from the 2005 data include:

- The proportion of the civilian noninstitutional population age 16 years old and over that worked at some time during the year was 67.7 percent in 2005, essentially unchanged from 2004.
- The proportion of workers who worked full time, year round in 2005 ( 67.5 percent) was up from 2004 (66.8 percent).
- The "work-experience unemployment rate"-defined as the number unemployed at some time during the year as a proportion of the number who worked or looked for work during the yeardecreased to 9.3 percent in 2005 from 9.7 percent in 2004.

## Persons with Employment

In 2005, the proportion of the civilian noninstitutional population 16 years old and over that worked at some point during the year was 67.7 percent, essentially unchanged from 2004. The proportion of men who worked at some time during the year edged up to 74.4 percent in 2005 ; among women the proportion was about unchanged at 61.4 percent. (See table 1.)

The proportions of whites ( 68.3 percent), blacks ( 63.7 percent), Asians ( 67.4 percent), and Hispanics ( 68.0 percent) that worked some time during the year were essentially unchanged in 2005. (See table 2.)

Among those with work experience during 2005, 77.4 percent were employed year round (either full or part time), up by 0.4 percentage point from 2004. Continuing a long-term growth trend, full-year employment among women edged up to 74.0 percent in 2005. The percentage of men employed year round also was up over the year, increasing to 80.5 percent from 80.0 percent in 2004. (See table 1.)

About 4 out of 5 of those who were employed at some time during 2005 usually worked full time, about the same ratio as in 2004. Among both men and women, the proportion who worked full time was little changed in 2005 (87.0 and 72.7 percent, respectively). (See table 1.)

## Persons with Unemployment

Overall, 14.5 million persons experienced some unemployment in 2005, down from 15.1 million in 2004. Declines in unemployment among women accounted for more than 70 percent of the over-the-year change. (See table 3.)

At 9.3 percent in 2005, the "work-experience unemployment rate" was down 0.4 percentage point from 2004. The rate is low by historical standards, but is above the series low of 8.6 percent reached in 2000. The rate for blacks in 2005, 14.8 percent, was higher than the rates for Hispanics or Latinos ( 10.0 percent), whites ( 8.5 percent), and Asians ( 7.2 percent). (See tables 3 and 4.)

In 2005, among whites, the "work-experience unemployment rate" for men ( 8.9 percent) was higher than that for women ( 7.9 percent). This was also true for black men and women ( 16.3 and 13.6 percent, respectively). In contrast, among Asians, the rate for women ( 7.7 percent) was higher than that of men ( 6.7 percent). The "work- experience unemployment rates" for Hispanic men and women (10.2 and 9.6 percent, respectively) were little different. (See table 4.)

In 2005, among those who experienced unemployment, the median number of weeks spent looking for work was 14.6 , down slightly from 14.9 in 2004. About 2.4 million individuals had looked for a job but did not work at all in 2005, about the same as in 2004. Of the 12.1 million persons who worked during the year and also experienced unemployment, 25.5 percent had two or more spells of joblessness, compared to 23.1 percent in 2004.

## Technical Note

The data presented in this release were collected in the Annual Social and Economic Supplement to the Current Population Survey (CPS). The CPS is a monthly sample survey conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. Data from the CPS are used to obtain the monthly estimates of the nation's employment and unemployment levels. The supplement, conducted in the months of February through April, includes questions about work activity during the prior calendar year. For instance, data collected in 2006 refer to the 2005 calendar year. Because the reference period is a full year, the number of persons with some employment or unemployment greatly exceeds the average levels for any given month, which are based on a 1-week reference period, and the corresponding annual average of the monthly estimates. As shown below, for example, the number experiencing any unemployment during 2005 was about twice the number unemployed in an average month during the year.

$$
\begin{array}{lrr}
2005 \text { estimates (in thousands) } & & \\
\text { Annual average of } & 141,730 & 7,591 \\
\text { monthly estimates } & 154,322 & 14,531
\end{array}
$$

In addition, estimates from the supplement differ from those obtained in the basic CPS because the questions used to classify workers as either employed or unemployed are different. More important, perhaps, is that fewer questions by which to categorize respondents are asked in the supplement. In regard to unemployment in particular, the supplement has no questions on the type of job search activity or on the respondent's availability to work. Also, individuals can be counted as both employed and unemployed in the work experience data, whereas, for a specific reference week, each person is only counted in one category and employment activity takes precedence over job search activity.

Work experience data for 2005, which were collected in the 2006 Annual Social and Economic Supplement to the CPS, are not strictly comparable with data for 2004 and earlier years because of the introduction in January 2006 of revised population controls used in the CPS. The effect of the revised population controls on the work experience estimates is unknown. However, the effect of the new controls on the monthly CPS estimates was to decrease the December 2005 employment level by 123,000 and the unemployment level by 8,000 . For additional information, see "Adjustments to Household Survey Population Estimates in January 2006" in the February 2006 issue of Employment and Earnings, available on the Internet at http://www.bls.gov/cps/cps06adj.pdf.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone: 1-800-877-8339.

## Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

For a full discussion of the reliability of data from the CPS and information on estimating standard errors, see the "Explanatory Notes and Estimates of Error" section of Employment and Earnings.

## Concepts and definitions

Persons who worked. In the 2006 supplement, persons are considered to have worked if they responded "yes" to either the question "Did you work at a job or business at any time during 2005?" or "Did you do any temporary, part-time, or seasonal work even for a few days during 2005?"

Unemployed persons. Persons who worked during the year but not in every week are counted as unemployed if they also reported looking for work or being on layoff from a job during the year. Those who reported no work activity during the year are considered unemployed if they responded "yes" to the question "Even though you did not work in 2005, did you spend any time trying to find a job or on layoff?"

Labor force participants. Persons who either worked or were unemployed during the year.

Usual full- and part-time employment. These data refer to the number of hours a worker typically works during most weeks of the year. Workers are classified as full time if they usually worked 35 hours or more in a week; part-time employment refers to workers whose typical workweek was between 1 and 34 hours.

Year-round and part-year employment. Workers are classified as year round if they worked 50 to 52 weeks. Part-year employment refers to workers who worked fewer than 50 weeks.

| 50 to 52 weeks | 8.1 | 8.0 | 4.5 | 4.8 | 13.5 | 12.7 |
| 27 to 49 weeks | 2.9 | 2.5 | 1.6 | 1.4 | 4.7 | 4.1 |
| 1 to 26 weeks | 4.6 | 4.5 | 3.0 | 2.9 | 6.9 | 6.9 |

1 Time worked includes paid vacation and sick leave.
2 Usually worked 35 hours or more per week.
${ }^{3}$ Usually worked 1 to 34 hours per week.
NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals shown in table 3 because data
are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data refer to persons 16 years and over. Also, see Note, table 1.

[^3]are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data refer to persons 16 years and over. Also, see Note, table 1.

[^0]:    1 Time worked includes paid vacation and sick leave.
    ${ }^{2}$ Usually worked 35 hours or more per week.
    ${ }^{3}$ Usually worked 1 to 34 hours per week.
    NOTE: Data refer to persons 16 years and over. Data for 2005, which were collected in the 2006 Annual Social and Economic Supplement to the Current Population Survey, are not strictly comparable with data for 2004

[^1]:    ${ }^{1}$ Worked 50 or 51 weeks.
    2 Worked less than 50 weeks.
    NOTE: Data refer to persons 16 years and over. Also, see Note, table 1.

[^2]:    See footnotes at end of table.

[^3]:    1 Time worked includes paid vacation and sick leave.
    2 Worked 50 or 51 weeks.
    3 Worked less than 50 weeks.
    NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals shown in table 3 because data
