U.S. IMPORT AND EXPORT PRICE INDEXES – MARCH 2020

Prices for U.S. imports fell 2.3 percent in March, the U.S. Bureau of Labor Statistics reported today, following a 0.7-percent decline the previous month. The March drop was driven by lower fuel prices. U.S. export prices decreased 1.6 percent in March, after falling 1.1 percent in February.

Chart 1. One-month and 12-month percent changes in the Import Price Index: March 2019 – March 2020

Imports

The price index for U.S. imports declined 2.3 percent in March, the largest monthly drop since import prices fell 3.2 percent in January 2015. The March decline followed a 0.7-percent decrease in February and 0.2-percent advances in each of the 3 months prior to that. Import prices also fell on a 12-month basis, declining 4.1 percent from March 2019 to March 2020. The decrease was the largest over-the-year drop since the index fell 4.7 percent for the 12 months ended June 2016. (See table 1.)

Coronavirus (COVID-19) Impact on March 2020 Import and Export Price Index Survey Data

The import and export price quotes are requested for transactions occurring as close to the first day of the month as possible. While not directly related to the COVID-19 pandemic, response rates for March were approximately 6.5 percentage points lower than March 2019. No changes in estimation procedures were necessary. Additional information is available at www.bls.gov/bls/effects-of-covid-19-pandemic-on-bls-price-indexes.htm#Import-Export.

Fuel Imports: Import fuel prices fell 26.8 percent in March, after decreasing 9.0 percent in February. The March decline, led by a 27.4-percent drop in petroleum prices, was the largest decrease in import fuel prices since the index fell 27.8 percent in November 2008. The decline in petroleum prices followed an 8.8-percent drop the previous month. Natural gas prices also fell in March, decreasing 16.5 percent, after declining 14.0 percent in February and 12.2 percent in January. Import fuel prices fell 36.2 percent over the past year; lower petroleum prices and natural gas prices both contributed to the decline.

All Imports Excluding Fuel: Import prices excluding fuel were unchanged in March following 0.3-percent increases in February and January. In March, lower prices for consumer goods and foods, feeds, and beverages offset advancing prices for automotive vehicles, nonfuel industrial supplies and materials, and capital goods. Prices for nonfuel imports decreased 0.5 percent for the year ended in March.

Nonfuel Industrial Supplies and Materials: The price index for nonfuel industrial supplies and materials rose 0.4 percent in March, after increasing 1.0 percent in February. The March advance was led by a 1.2-percent rise in unfinished metals prices and a 2.3-percent increase in prices for building materials.

Finished Goods: Finished goods prices were mixed in March. Higher prices for automotive vehicles and capital goods were largely offset by lower consumer goods prices. The price index for automotive vehicles rose 0.4 percent, driven by a 1.3-percent advance in non-engine auto parts. A 1.1-percent rise in computer prices led capital goods prices up 0.1 percent. In contrast, consumer goods prices fell 0.3 percent, driven by a 6.6-percent drop in diamond prices.

Foods, Feeds, and Beverages: Prices for foods, feeds, and beverages decreased 1.0 percent in March following a 1.3-percent increase in February. In March, a 12.9-percent decline in vegetable prices more than offset a 7.0-percent advance in fruit prices.

r Revised

Chart 2. One-month and 12-month percent change in the Export Price Index: March 2019 – March 2020

Exports

Prices for U.S. exports declined 1.6 percent in March, after falling 1.1 percent in February and rising 0.6 percent in January. The March decrease was the largest monthly drop in export prices since the index declined 1.7 percent in January 2015. Decreasing prices for both nonagricultural exports and agricultural exports contributed to the March drop. U.S. export prices fell 3.6 percent for the year ended in March, the largest 12-month decrease since a 4.5-percent decline from May 2015 to May 2016. (See table 2.)

Agricultural Exports: Export agricultural prices declined 1.4 percent in March following a 2.7-percent decrease the previous month. In March, lower prices for other animal feeds, vegetables, nuts, cotton, and wheat more than offset higher prices for fruit, soybeans, and meat. Prices for agricultural exports fell 2.2 percent over the past year, the largest 12-month drop since the index decreased 5.3 percent for the year ended May 2019.

All Exports Excluding Agriculture: The price index for nonagricultural exports declined 1.5 percent in March, after falling 1.1 percent in February. In March, falling prices for nonagricultural industrial supplies and materials; consumer goods; and nonagricultural foods more than offset rising prices for capital goods and automotive vehicles. Prices for nonagricultural exports fell 3.7 percent over the past 12 months, the largest over-the-year decrease since a 3.8-percent decline for the year ended June 2016.

Nonagricultural Industrial Supplies and Materials: Nonagricultural industrial supplies and materials prices fell 4.6 percent in March following a 3.4-percent drop the previous month. Both decreases were driven by falling fuel prices which declined 13.2 percent in March and 10.6 percent in February. The March drop was the largest 1-month decline in export fuel prices since a 16.5-percent decrease in January 2015.

Finished Goods: Prices for finished goods were mixed in March. Similar to imports, capital goods prices and automotive vehicles prices rose and consumer goods prices declined. The price index for capital goods increased 0.2 percent in March following a 0.4-percent advance the previous month. The March rise was led by a 3.4-percent increase in computer prices. Prices for automotive vehicles ticked up 0.1 percent for the second consecutive month in March. In contrast, the price index for consumer goods decreased 0.6 percent, the largest monthly drop since the index fell 1.0 percent in January 2017.

Measures of Import and Export Prices by Locality

Imports by Locality of Origin: Import prices from China rose for the third time in the past 4 months, after not increasing on a monthly basis since May 2018. Prices for imports from China ticked up 0.1 percent in March following a 0.3-percent decline in February and 0.2-percent advances in January and December. Despite the recent rises, the price index for imports from China decreased 1.2 percent over the past 12 months. Import prices from Japan were unchanged for the second consecutive month in March. Prices for imports from Japan rose 0.2 percent from March 2019 to March 2020. Driven by lower fuel prices, the price index for imports from Canada fell 8.3 percent in March, the largest monthly decline since the index decreased 9.0 percent in November 2008. Import prices from the European Union and Mexico also decreased in March. Prices for imports from the European Union fell 0.3 percent, after edging down 0.1 percent in February, and the price index for imports from Mexico declined 0.2 percent following a 0.1-percent drop the previous month. (See table 7.)

Exports by Locality of Destination: Prices for exports to China declined 2.3 percent in March following a 0.7-percent drop in February. The March decrease was the largest 1-month drop since the index was first published in December 2017. Export prices to China fell 4.7 percent over the past 12 months. The price index for exports to Japan declined 3.4 percent in March, after decreasing 1.2 percent the previous month. Similar to export prices to China, the March decline in export prices to Japan was the largest monthly drop since the index was first published in December 2017. Prices for exports to Canada and the European Union each fell 1.9 percent in March. The declines came after prices for exports to Canada decreased 1.4 percent in February and export prices to the European Union fell 0.9 percent. The price index for export prices to Mexico decreased 0.4 percent in March, after falling 2.5 percent in February. (See table 8.)

Terms of Trade Indexes: Terms of Trade indexes are based on country, region, or grouping and measure the change in the purchasing power of exports relative to imports. The U.S. terms of trade with China fell 2.4 percent in March, the largest decline in the index since publication began in December 2017. The drop in the index resulted from both a decrease in export prices to China and an increase in import prices from China. The index for U.S. terms of trade with Japan decreased 3.5 percent in March, after a 1.1-percent drop the previous month. The U.S. terms of trade with the European Union and Mexico also fell in March, declining 1.7 percent and 0.1 percent, respectively. In contrast, the index for U.S. terms of trade with Canada rose 6.9 percent in March following a 3.2-percent advance in February. (See table 9.)

Import and Export Services

Imports: Import air passenger fares declined 9.8 percent in March, the largest monthly decrease since the index fell 9.9 percent in July. The March drop was driven by a 12.9-percent decline in European fares. Overall import air passenger fares decreased 11.3 percent for the year ended in March, the largest 12-month drop since the index fell 11.6 percent from October 2008 to October 2009. Import air freight prices advanced 2.6 percent in March, the largest 1-month increase since the index rose 6.9 percent in April 2018. The price index for import air freight increased 3.3 percent over the past year. (See table 10.)

Exports: Export air passenger fares declined 4.2 percent in March, after decreasing 9.3 percent the previous month. In March, lower Asian and European fares contributed to the overall decrease. The index for export air passenger fares declined 8.1 percent over the past 12 months, the largest over-the-year drop since the index fell 9.9 percent in July 2016. Prices for export air freight fell 1.0 percent in March and 0.8 percent from March 2019 to March 2020.

Import and Export Price Index data for April are scheduled for release on Thursday, May 14, 2020 at 8:30 a.m. (EDT).

TECHNICAL NOTE

Import and Export Goods and Services Price Indexes - All indexes use a modified Laspeyres formula and are not seasonally adjusted. Price indexes are reweighted annually, with a 2-year lag in the weights. Published series use a base year of 2000=100 where possible. More detailed index series and additional information may be obtained at www.bls.gov/mxp or by calling (202) 691-7101.

Merchandise Goods Classification Systems - The merchandise price indexes are published using three classification systems. Items are classified by end use according to the Bureau of Economic Analysis Classification System, by industry according to the North American Industry Classification System (NAICS), and by product category according to the Harmonized System (HS). While classification by end use and product category are self-explanatory, some notes are in order for classifying items by industry. In the NAICS imports and exports tables, items are classified by output industry, not input industry. As an example, NAICS import index 326 (plastics and rubber products manufacturing) includes outputs such as manufactured plastic rather than inputs such as petroleum. The NAICS classification structure also matches the classification system used by the Producer Price Index (PPI) to produce the NAICS primary products indexes.

Import Price Goods Indexes - Items are classified by the Harmonized Tariff Schedule of the United States Annotated (TSUSA). Import prices are based on U.S. dollar prices paid by the U.S. importer. The prices are generally either "free on board" (f.o.b.) foreign port or "cost, insurance, and freight" (c.i.f.) U.S. port transaction prices, depending on the practices of the individual industry. The index for crude petroleum is calculated from data collected by the U.S. Department of Energy.

Export Price Goods Indexes - Items are classified by the Harmonized Schedule B classification system of the U.S. Bureau of the Census. The prices used are generally either "free alongside ship" (f.a.s.) factory or "free on board" (f.o.b.) transaction prices, depending on the practices of the individual industry. Prices used in the grain index, excluding rice, are obtained from the U.S. Department of Agriculture.

Services Price Indexes - Indexes for import and export air passenger fares calculate changes in the average revenue received per passenger by foreign carriers from U.S. residents and by U.S. carriers from foreign residents, respectively. Data are obtained from an airline consulting service and report on tickets sold by travel agencies, travel websites, and directly by the airlines. Taxes and fees are included in both the import and export air passenger fares indexes. Import air passenger fares data have used the airline consulting service source since September 2008. Before April 2018, the export air passenger fares data were collected directly by BLS from U.S. airlines. The air freight indexes are calculated from data collected directly from airlines. These data exclude mail and passenger baggage. The scope of the service being priced is the movement of freight from airport to airport only, and does not include any ground transportation or port service. The air freight indexes are presented using two definitions: balance of payments (which represents transactions between U.S. and foreign residents) and international (which represents transactions inbound to and outbound from the United States.) Fact sheets specifying detailed information for each services industry are available at www.bls.gov/mxp under "MXP Publications."

Import Price Indexes by Locality of Origin - Prices used in these indexes are a subset of the data collected for the import price indexes. The indexes are specific to a country, region, or grouping and, beginning with January 2002, are based on the North American Industry Classification System (NAICS) covering goods-producing industries. Nonmanufactured goods are defined as NAICS 11 and 21, and manufactured goods are defined as NAICS 31-33.

Export Price Indexes by Locality of Destination - Prices used in these indexes are a subset of the data collected for the export price indexes. The indexes are specific to a country, region, or grouping and are based on the North American Industry Classification System (NAICS) covering goods-producing industries. Nonmanufactured goods are defined as NAICS 11 and 21, and manufactured goods are defined as NAICS 31-33.

Terms of Trade Indexes - Terms of trade indexes measure the relative price of exports in terms of import prices for a specific country, region, or grouping. The indexes are calculated as one country, region, or grouping's all-export goods price index divided by the corresponding all-import goods price index on a scale of 100.

Relative Importance - A relative importance is a specific index's price-updated value share (expressed as a percentage) of overall imports or exports at a specific point in time. Relative importance values are affected by the trade weights at the point indexes are reweighted and index changes relative to other indexes since the reweight point. If an index is rising in value relative to other indexes over time, the relative importance will increase as well.

Revision Policy - To reflect the availability of late reports and corrections by respondents, monthly data may be revised in each of the 3 months after original publication. After 3 months, no further data revisions take place. For example, data first published in the January release will be subject to revision in the releases for February, March, and April.

Rounding Policy - Index values are rounded to the tenth decimal place after being calculated. All percent changes are then derived from the rounded index values and subsequently rounded to the tenth decimal place.

Uses of the Data - The primary use of the indexes is to deflate trade statistics, notably the foreign trade sector of the National Income and Product Accounts (NIPA) constructed by the Department of Commerce. Other published indexes are useful for general market analysis. For trade in international services, balance of payments indexes are used for deflating NIPA, while international indexes are more appropriate for market analysis.

Email Subscription - The U.S. import and export price indexes news release is available through an email subscription service at www.bls.gov/bls/list.htm.

Additional Information - More detailed data are available on the Import/Export Price Indexes home page at www.bls.gov/mxp. For import and export price indexes data requests, send an email to mxpinfo@bls.gov.

Information from this release will be made available to sensory impaired individuals upon request. Voice phone: (202)-691-5200; Federal Relay Service: 1-(800)-877-8339.
