Media contact: (202) 691-5902 • PressOffice@bls.gov

FOREIGN-BORN WORKERS: LABOR FORCE CHARACTERISTICS — 2024

The unemployment rate for the foreign born in the United States was 4.2 percent in 2024, up from 3.6 percent in 2023, the U.S. Bureau of Labor Statistics reported today. The jobless rate of the native born was 4.0 percent in 2024, up from 3.6 percent in 2023.

Data on nativity are collected as part of the Current Population Survey (CPS), a monthly sample survey of approximately 60,000 households. The foreign born are people who reside in the United States but who were not U.S. citizens at birth. Specifically, they were born outside the United States (or one of its outlying areas such as Puerto Rico or Guam), and neither parent was a U.S. citizen. The foreign born include legally-admitted immigrants, refugees, temporary residents such as students and temporary workers, and undocumented immigrants. However, the survey does not separately identify people in these categories. For further information about the survey, see the Technical Note in this news release.

Highlights from the 2024 data:

- From 2023 to 2024, the unemployment rate of the foreign born increased to 4.2 percent, and the jobless rate for the native born increased to 4.0 percent. (See table 1.)
- In 2024, the foreign born accounted for 19.2 percent of the U.S. civilian labor force, up from 18.6 percent in 2023. (See table 1.)
- People who are of Hispanic or Latino ethnicity continued to account for nearly one-half (48.7 percent) of the foreign-born labor force in 2024, and those who are Asian accounted for about one-quarter (24.6 percent). (See table 1.) (Data in this news release for people who are White, Black or African American, or Asian do not include those of Hispanic or Latino ethnicity. Data on people of Hispanic or Latino ethnicity are presented separately.)
- Foreign-born men continued to participate in the labor force at a considerably higher rate in 2024 (77.3 percent) than their native-born counterparts (65.9 percent). By contrast, 56.1 percent of foreign-born women were labor force participants, lower than the participation rate of 57.8 percent for native-born women. (See table 1.)
- In 2024, foreign-born workers were more likely than native-born workers to be employed in service occupations; natural resources, construction, and maintenance occupations; and

production, transportation, and material moving occupations. Foreign-born workers were less likely than native-born workers to be employed in management, professional, and related occupations and in sales and office occupations. (See table 4.)

- The median usual weekly earnings of foreign-born full-time wage and salary workers were \$1,001 in 2024, compared with \$1,190 for their native-born counterparts. (See table 5.) (Differences in earnings reflect a variety of factors, including variations in the distributions of foreign-born and native-born workers by educational attainment, occupation, industry, and geographic region.)

Demographic Characteristics

The demographic composition of the foreign-born labor force differs from that of the native-born labor force. In 2024, men accounted for 57.1 percent of the foreign-born labor force, compared with 51.9 percent of the native-born labor force. By age, the proportion of the foreign-born labor force made up of 25- to 54-year-olds (70.3 percent) was higher than for the native-born labor force (62.5 percent). Labor force participation typically is highest among people in that age bracket. (See table 1.)

In 2024, nearly one-half (48.7 percent) of the foreign-born labor force was Hispanic or Latino, and about one-quarter (24.6 percent) was Asian. Those of Hispanic or Latino ethnicity and those who are Asian made up much lower percentages of the native-born labor force, at 12.7 percent and 2.5 percent, respectively. People who are White comprised 15.0 percent of the foreign-born labor force and those who are Black or African American comprised 10.6 percent, compared with 69.0 percent and 12.5 percent, respectively, of the native-born labor force.

In terms of educational attainment, the proportion of the foreign-born labor force age 25 and over that had not completed high school was 18.1 percent in 2024, over five times higher than the figure for the native-born labor force, at 3.2 percent. The foreign born were less likely than the native born to have some college or an associate degree—15.0 percent versus 27.0 percent. The proportions of foreign-born and native-born high school graduates (25.7 percent versus 24.5 percent) and those with a bachelor's degree or higher (41.3 percent versus 45.3 percent) were more similar.

Labor Force

In 2024, the foreign born accounted for 19.2 percent of the U.S. civilian labor force, up from 18.6 percent in 2023. In 2024, the labor force participation rate of the foreign born was little changed at 66.5 percent; the rate for foreign-born women held at 56.1 percent, while the rate for foreign-born men changed little over the year at 77.3 percent. The labor force participation rate of the native born changed little at 61.7 percent. The rates for both native-born men (65.9 percent) and women (57.8 percent) changed little over the year. (See table 1.)

Labor force participation rates for the foreign born varied across the major race and ethnicity groups in 2024, ranging from 61.6 percent for foreign-born people who are White to 70.3 percent for those who are Black or African American. Participation rates for the native born showed less

variation across the major race and ethnicity groups, ranging from 60.9 percent for native-born people who are White to 66.0 percent for those who are Hispanic or Latino.

Among the major race and ethnicity groups, the labor force participation rate of foreign-born people who are Black or African American decreased to 70.3 percent in 2024. The rates for foreign-born people who are White, Asian, and those who are Hispanic or Latino showed little change over the year. Among the native born, the participation rate of Asians increased to 65.8 percent. The rates for native-born people who are White, Black or African American, and Hispanic or Latino changed little from 2023 to 2024.

In 2024, foreign-born mothers with children under age 18 were less likely to be labor force participants than were native-born mothers—64.3 percent versus 77.1 percent. Labor force participation differences between foreign-born and native-born mothers were greater among those with younger children than among those with older children. Among women with children under age 3, the participation rate for foreign-born mothers was 50.0 percent, 19.5 percentage points below that for native-born mothers (69.5 percent). By comparison, the labor force participation rate of foreign-born mothers with children ages 6 to 17 (69.7 percent) was 11.2 percentage points lower than that for native-born mothers with children ages 6 to 17 (80.9 percent). The labor force participation rates of foreign-born and native-born fathers with children under age 18 were the same in 2024, at 93.5 percent. (See table 2.)

By region, the foreign born made up a larger share of the labor force in the West (24.4 percent) and in the Northeast (22.7 percent) in 2024 than for the nation as a whole (19.2 percent). In contrast, the foreign born made up a smaller share of the labor force in the Midwest (10.7 percent). The share in the South (19.0 percent) was similar to the labor force share for the nation as a whole. (See table 6.)

Employment

In 2024, the employment-population ratio of the foreign born edged down to 63.7 percent. The ratios for foreign-born men and women changed little, at 74.4 percent and 53.4 percent, respectively. The employment-population ratio of the native born decreased to 59.3 percent. In 2024, the ratio for native-born men decreased to 63.1 percent, while the ratio for native-born women changed little at 55.6 percent. (See table 1.)

Unemployment

From 2023 to 2024, the unemployment rate of the foreign born increased to 4.2 percent. For the native born, the jobless rate increased to 4.0 percent.

The unemployment rates for both foreign-born men and women increased in 2024, to 3.8 percent and 4.8 percent, respectively. The jobless rates for native-born men and women also increased (to 4.2 percent and 3.7 percent, respectively). (See table 1.)

For both the foreign born and the native born, jobless rates vary considerably by race and ethnicity. Among the foreign born, the unemployment rates for people who are Black or African

American (5.1 percent) and Hispanic or Latino (4.7 percent) were highest, followed by the rates of those who are White (3.7 percent) and Asian (3.1 percent). Among the native born, jobless rates were highest for people who are Black or African American (6.3 percent), followed by those who are Hispanic or Latino (5.4 percent), Asian (4.3 percent), and White (3.2 percent).

Occupation

In 2024, foreign-born workers were more likely than native-born workers to be employed in service occupations (22.0 percent versus 15.1 percent); natural resources, construction, and maintenance occupations (13.9 percent versus 7.7 percent); and production, transportation, and material moving occupations (15.5 percent versus 11.6 percent). Foreign-born workers were less likely than native-born workers to be employed in management, professional, and related occupations (35.4 percent versus 45.9 percent) and in sales and office occupations (13.2 percent versus 19.8 percent). (See table 4.)

Among employed men, the disparity was especially great in natural resources, construction, and maintenance occupations—22.7 percent of the foreign born worked in this occupational field in 2024, versus 14.1 percent of the native born. The occupational disparity for women was pronounced in service occupations—30.6 percent of the foreign born worked in that occupation group, compared with 17.8 percent of the native born. By contrast, both employed native-born men and women were more likely than their foreign-born counterparts to work in management, professional, and related occupations and in sales and office occupations.

Earnings

In 2024, median usual weekly earnings of foreign-born full-time wage and salary workers (\$1,001) were 84.1 percent of the earnings of their native-born counterparts (\$1,190). Among men, median weekly earnings for the foreign born (\$1,077) were 81.8 percent of the earnings of the native born (\$1,316). Median earnings for foreign-born women (\$911) were 84.8 percent of the earnings of native-born women (\$1,074). (See table 5.) (Differences in earnings reflect a variety of factors, including variations in the distributions of foreign-born and native-born workers by educational attainment, occupation, industry, and geographic region.)

Among the major race and ethnicity groups, Hispanic or Latino foreign-born full-time wage and salary workers earned 81.1 percent as much as their native-born counterparts in 2024. White foreign-born workers earned more than their native-born counterparts, by 16.4 percent. Earnings of Black or African American and Asian foreign-born workers were little different from those of their native-born counterparts.

The earnings of both foreign-born and native-born workers increase with education. In 2024, foreign-born workers age 25 and over with less than a high school diploma earned \$717 per week, while those with a bachelor's degree and higher earned 2.4 times as much—\$1,738 per week. Among the native born, those with a bachelor's degree and higher earned 2.1 times as much as those with less than a high school diploma—\$1,679 per week versus \$789 per week.

Native-born workers earn more than the foreign born at most educational attainment levels. For example, among high school graduates (no college), full-time workers who are foreign born (\$821) earned 85.3 percent as much as their native-born counterparts (\$962) in 2024. However, among those with a bachelor's degree and higher, the earnings of foreign-born workers (\$1,738) were slightly higher than the earnings of native-born workers (\$1,679).

Technical Note

The estimates in this news release are based on annual average data from the Current Population Survey (CPS). The CPS, which is conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS), is a monthly survey of about 60,000 eligible households that provides information on the labor force status, demographics, and other characteristics of the nation's civilian noninstitutional population age 16 and over. In response to the increased demand for statistical information about the foreign born, questions on nativity, citizenship, year of entry into the United States, and the parental nativity of respondents were added to the CPS beginning in January 1994. Prior to 1994, the primary sources of data on the foreign born were the decennial census, two CPS supplements (conducted in April 1983 and November 1989), and, to some extent, information collected by the U.S. Citizenship and Immigration Services (formerly known as the Immigration and Naturalization Service).

The foreign- and native-born data presented in this news release are not strictly comparable with data for earlier years due to the introduction of updated population estimates, or controls, used in the CPS. The population controls are updated each year in January to reflect the latest information about population change. Additional information is available from the BLS website at www.bls.gov/cps/documentation.htm#pop.

If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as *sampling error*, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by *nonsampling error*. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

Additional information about the reliability of data from the CPS and estimating standard errors is available at www.bls.gov/cps/documentation.htm#reliability.

Definitions

Definitions of the principal terms used in this news release are presented below.

Foreign born. The foreign born are people residing in the United States who were not U.S. citizens at birth. Specifically, they were born outside the United States (or one of its outlying areas such as Guam or Puerto Rico), and neither parent was a U.S. citizen. The foreign-born population includes legally-admitted immigrants, refugees, temporary residents such as students and temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the number of people in these categories.

Native born. The native born are people born in the United States or one of its outlying areas such as Puerto Rico or Guam or who were born abroad of at least one parent who was a U.S. citizen.

Race and ethnicity groups. In this news release, the data are presented for non-Hispanic Whites, Blacks, and Asians and for people of Hispanic or Latino ethnicity. These four groups are mutually exclusive but not exhaustive. Other race groups (including people who selected more than one race category) are included in the overall totals but are not shown separately because the number of survey respondents is too small to develop statistically reliable estimates. The presentation of data on race and ethnicity in this news release differs from that which appears in most analyses of CPS labor force data because people of Hispanic or Latino ethnicity are separated from the race groups. Because people of Hispanic or Latino ethnicity can be of any race, they are usually included in the race groups as well as shown separately in the Hispanic or Latino ethnicity group. The reason for the difference in the data presentation in this news release is because about half of the foreign born are of Hispanic or Latino ethnicity and they have somewhat different labor force characteristics than the non-Hispanic foreign born.

Employed. Employed people are all those who, during the survey reference week, (a) did any work at all as paid employees; (b) worked in their own business, profession, or on their own farm; or (c) worked 15 hours or more as unpaid workers in a family member's business. People who were temporarily absent from their jobs because of illness, bad weather, vacation, labor dispute, or another reason also are counted as employed.

Unemployed. The unemployed are those who had no employment during the reference week, were available for work at that time, and had made specific efforts to find employment sometime during the 4-week period ending with the reference week. People who were waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

Civilian labor force. The civilian labor force comprises all people classified as employed or unemployed.

Unemployment rate. The unemployment rate is the number unemployed as a percent of the civilian labor force.

Labor force participation rate. The labor force participation rate is the labor force as a percent of the population.

Usual weekly earnings. Data represent earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received (at the main job in the case of multiple jobholders). Earnings reported on a basis other than weekly are converted to a weekly equivalent.

Full-time wage and salary workers. These are workers who usually work 35 hours or more per week at their sole or principal job and receive wages, salaries, and other types of compensation. The group includes employees in both the private and public sectors but, for purposes of the earnings series, excludes all self-employed people, regardless of whether or not their businesses are incorporated.

Median earnings. The median earnings is the amount which divides a given earnings distribution into two equal groups, one having earnings above the median and the other having earnings below the median.

¹ Data for race/ethnicity groups do not sum to totals because data are not presented for all races.

² Includes people with a high school diploma or equivalent.

³ Includes people with bachelor's, master's, professional, and doctoral degrees.

NOTE: Updated population controls are introduced annually with the release of January data.
