Major Work Stoppages in 2020

In 2020, there were 7 major work stoppages beginning in the year, the U.S. Bureau of Labor Statistics reported today. A major work stoppage involves 1,000 or more workers and lasts at least one shift during the work week, Monday through Friday excluding Federal holidays. This year tied with 2017 for the second lowest number of major work stoppages recorded in a year since the series began in 1947; the lowest annual total was 5 in 2009. For the past 20 years, on average, there have been 16 work stoppages beginning in the year. (See chart 1.)

Data Correction

The BLS has issued a correction to work stoppage data from February 2018 to December 2020. Additional information is available at www.bls.gov/errata/home.htm?errataID=83510.

Coronavirus (COVID-19) Pandemic Impact on the 2020 Major Work Stoppages

Data collection for Major Work Stoppages was not impacted by the COVID-19 pandemic. Additional information is available at www.bls.gov/covid19/effects-of-covid-19-on-workplace-injuries-and-illnesses-compensation-and-occupational-requirements.htm#work-stoppages.
While 2017 and 2020 both had 7 work stoppages beginning in the year, the industry composition did see some differences. There were 24,000 workers involved in major work stoppages that began in 2020. The education and health services industry supersector accounted for over 75 percent of idled workers. Within these sectors, 18,700 workers were idled for 23 cumulative days. In 2017, 25,300 workers were idled and the information sector accounted for the majority of idled workers at 15,000 workers. (See chart 2.)

Chart 2: Number of workers idled by industry

Work stoppage by ownership sector has also seen a shift when comparing 2017 and 2020. State and local government accounted for 5 of the 7 work stoppages in 2020, compared to the 3 of the 7 in 2017. (See chart 3.)

In 2020, 11,900 state and local government workers were idled for 22 workdays resulting in a total of 60,100 days of idleness.

TECHNICAL NOTE

The Bureau of Labor Statistics provides information on major (1,000 workers or more) work stoppages in the United States. The number of workers includes those idled for one shift or longer in the establishment(s) directly involved in the dispute as well as those in the establishment idled for related reasons, such as their facility is closed down during the stoppage. An attempt is made to contact the parties involved in the work stoppage (employer, employer group, and union) to determine whether the duration and number of workers idled by the stoppage meet the thresholds for inclusion in this report. For additional information on the concepts, data sources, design, measures, and history of the work stoppages program, see www.bls.gov/opub/hom/wsp/home.htm.

Detailed monthly work stoppage data since 1993 are available at www.bls.gov/web/wkstp/monthly-listing.htm and includes organizations involved, location, beginning and ending dates, industry, ownership, the number of workers, and total days of idleness.

Annual historical major work stoppages data from 1947 to present, including the number of work stoppages, workers idled, and total days of idleness, are available at www.bls.gov/web/wkstp/annual-listing.htm.
