Major Work Stoppages in 2021

In 2021, there were 16 major work stoppages beginning in the year, the U.S. Bureau of Labor Statistics reported today. A major work stoppage involves 1,000 or more workers and lasts at least one shift during the work week, Monday through Friday excluding Federal holidays. (See chart 1.)

The lowest annual total of major work stoppages was 5 in 2009 and the highest was 470 in 1952. Between the years 2000-2021, there have been an average of 17 work stoppages beginning in the year.

Chart 1. Number of major work stoppages, 2000-2021

There were 80,700 workers involved in major work stoppages that began in 2021. Service-providing industries accounted for 76 percent of idled workers over the year or 61,000 workers. Within service-providing industries, the education and health services sector accounted for the idling of 52,600 workers; 45,400 health care and social assistance workers and 7,200 educational services workers were idled as a result of major work stoppages.
In 2021, goods-producing industries accounted for 24 percent of idled workers or 19,700 workers. Within goods-producing industries, the manufacturing sector accounted for the idling of the majority of workers involved in work stoppages; 16,600 manufacturing workers were involved in major work stoppages in 2021. (See chart 2.)

Chart 2. Number of workers idled by industry, in thousands, 2021

In 2021, there was one local government work stoppage, where 2,000 workers were idled 11 days resulting in 22,000 days of idleness. In private industry, 78,700 workers were idled beginning in the year, resulting in 1,081,700 cumulative days of idleness. (See chart 3.)

Chart 3. Number of idled workers involved in work stoppages by ownership, in thousands, 2000-2021
TECHNICAL NOTE

The Bureau of Labor Statistics provides information on major (1,000 workers or more) work stoppages in the United States, excluding U.S. territories. Because of the complexity of most labor-management disputes, the Work Stoppages program makes no attempt to distinguish between strikes and lockouts in its statistics. The workers involved in a strike or lockout may or may not be members of a union.

The number of workers includes those idled for one shift or longer in the establishment(s) directly involved in the dispute as well as those in the establishment idled for related reasons, such as their facility is closed down during the stoppage. This number does not account for secondary idleness— that is, the effects of a stoppage on other establishments or industries whose employees may be made idle as a result of shortages of material or services.

A day of idleness is a day that an employee is scheduled to work (Monday through Friday, excluding federal holidays) but does not work due to a work stoppage. The number of total days of idleness is computed by multiplying the number of workers idled by the number of lost workdays during the reference month.

An attempt is made to contact the parties involved in the work stoppage (employer, employer group, and union) to determine whether the duration and number of workers idled by the stoppage meet the thresholds for inclusion in this report. For additional information on the concepts, data sources, design, measures, and history of the work stoppages program, see www.bls.gov/opub/hom/wsp/home.htm.

Detailed monthly work stoppage data since 1993 are available at www.bls.gov/web/wkstp/monthly-listing.htm and includes organizations involved, location, beginning and ending dates, industry, ownership, the number of workers, and total days of idleness.

Annual historical major work stoppages data from 1947 to present, including the number of work stoppages, workers idled, and total days of idleness, are available at www.bls.gov/web/wkstp/annual-listing.htm.
