## Consumer Expenditures in 2018

May 2020 | Report 1086

This Consumer Expenditure Surveys (CE) annual report presents integrated data from the 2018 Diary and Interview portions of the CE, including data tables. (For details about CE, see the technical notes.) The report's tables show average expenditures, income, and characteristics for consumer units classified by income before taxes by quintile, decile, and range; age of the reference person; size of the consumer unit; composition of the consumer unit; number of earners; housing tenure (homeowner or renter) and type of area (urban or rural); region of residence; occupation; highest education level of any consumer unit member; race; Hispanic or Latino origin; and generation of the reference person. ${ }^{1}$

This report highlights spending patterns for 2018 from the CE, including a brief discussion of expenditure changes for the year. According to annual nominal data from the CE, consumer spending increased 1.9 percent, from $\$ 60,060$ per consumer unit in 2017 to $\$ 61,224$ in 2018 , compared with a 4.8 -percent increase in 2017 from 2016. At the same time, the average consumer unit's income before taxes increased by 6.9 percent, from $\$ 73,573$ in 2017 to $\$ 78,635$ in 2018, in contrast to the decline of 1.5 percent in 2017 from 2016.

In 2018, prices, as measured by the average annual change in the Consumer Price Index for All Urban Consumers (CPI-U, U.S. city average, all items, base period $1982-1984=100$ ), rose by 2.4 percent, compared with the 1.9 -percent increase in spending. ${ }^{2}$ In 2017, prices, as measured by the CPI-U, increased by 2.1 percent, compared with the 4.8 percent increase in spending.

## Developments in 2018

Compared with the previous year, spending increased in 2018 for 11 of the 14 major aggregated categories of expenditures tracked by the CE: food, alcoholic beverages, housing, apparel and services, transportation, healthcare, entertainment, personal care products and services, tobacco products and smoking supplies, cash contributions, and personal insurance and pensions. (See table A.) Expenditures on personal insurance and pensions experienced the largest increase at 7.8 percent. The largest decline in expenditures was 5.6 percent in education expenditures. Alcoholic beverages, and tobacco products and smoking supplies showed a 4.5 -percent increase. Lower increases in expenditures on housing, apparel and services, and transportation ranged from 1 percent to 2 percent. Spending on healthcare, entertainment, personal care products, and cash contributions were each up less than 1 percent. Spending on reading and miscellaneous declined by 1.8 percent and 1.7 percent respectively.

Table A. Average annual expenditures and characteristics of all consumer units, 2015-18

| Item | 2015 | 2016 | 2017 | 2018 | Percent change |  |  |

## Expenditure shares

Expenditure shares are important in the short run to provide a snapshot of the typical allocation of family spending, and in the long run to reflect the changes in the economic standard of living. For example, smaller shares spent on food and other life necessities mean more is available to spend on entertainment, education, cash contributions, or other items that are not strictly necessary. Table B and chart 1 show expenditure shares, or the percent distribution of total annual expenditures by major expenditure categories, for all CUs from 2015-18. As in previous years, housing was the largest component of overall expenditures, accounting for 32.8 percent of total expenditures in 2018. Eight categorieshousing, transportation, food, personal insurance and pensions, healthcare, entertainment, cash contributions, and apparel and services expenditures-accounted for 93.1 percent of total CU expenditures in 2018.

Click legend items to change data display. Hover over chart to view data.
Source: U.S. Bureau of Labor Statistics, Consumer Expenditure Surveys.

Seven out of 14 categories of spending shares were unchanged in 2018 from the past year's levels: food, alcoholic beverages, entertainment, personal care products and services, reading, tobacco products and smoking supplies, and cash contributions. (See table B.) This is not surprising, because expenditure shares usually do not fluctuate much in the short term. In fact, the largest change was in personal insurance and pensions, with a 0.6-percentage point increase, to 11.9 percent, in 2018. Expenditure shares increased by 0.1 percentage point in both apparel and services and alcoholic beverages in 2018. Housing expenditure shares declined by 0.3 percentage points to 32.8 percent, mostly because of the decline in expenditures in the shelter subcategory. The education expenditure share declined by 0.2 percentage
points to 2.3 percent, the same level they were in 2015 and 2016. The share of miscellaneous expenditures declined by 0.1 percentage point to 1.6 percent in 2018, compared with 2017.

Table B. Average annual expenditure shares and characteristics of all consumer units, 2015-18

| Item | 2015 | 2016 | 2017 | 2018 |

## Expenditures on housing

Housing expenditures increased by 1.0 percent in 2018, compared with the 5.3-percent growth in 2017 (table A). Housing accounted for 32.8 percent of consumer unit expenditures in 2018, a 0.3 -percentage point decline in expenditure share from the past year's level (table B). The declining expenditures on owned dwellings for shelter was the major driver: after exhibiting a large increase of 10.4 percent in 2017 , they declined by 3.9 percent in 2018 (table A). The homeownership rate in 2018 was unchanged from 2017 at 63 percent, which was still a lower ownership rate, compared with the rates for 2000-2013. (See chart 2.)

Chart 2. Homeownership rate, Consumer Expenditure Surveys (CE), 2000-18

## Expenditures on gasoline

Consumer units spent 7.4 percent more on gasoline of all types in 2018 than in 2017. While the percentage change in average gasoline expenditures and the percentage change in the CPI-U for gasoline have both been moving in the same direction for the last 10 years, the changes have differed in magnitude for certain years. The change in magnitude fluctuated more in 2015, when CPI-U gasoline declined by 27.2 percent and the spending on gasoline declined by 16.1 percent from the year earlier. The year-over-year changes in magnitude narrowed in 2016. After 2016, the changes in CPI-U gasoline surpassed the changes in gasoline expenditures. (See chart 3.) The CPI-U index of gasoline increased by 13.4 percent in 2018.

## Chart 3. Change in gasoline spending and CPI-U gasoline, 2008-18

## Expenditures by income quintiles

Average annual spending increased across all five income quintiles in 2018. Spending by consumer units in the lowest income quintile increased by 1.5 percent despite a 1-percent decline in income before taxes. For the other quintiles, both expenditures and incomes increased, with expenditures rising less than incomes. That is, for the middle quintiles ( 2,3 , and 4), incomes rose at the same rate of just under 5 percent, while for the highest quintile (5), incomes rose 9 percent. In comparison, expenditures for the third and fourth income quintiles increased 2.5 percent and 2.3 percent, respectively. Expenditures for the second and highest income quintiles were 1.7 and 1.5 percent higher, respectively. Expenditures for all income quintiles have increased each year from 2013-18. (See chart 4 and table C.)

BLS REPDRTS

Click legend items to change data display. Hover over chart to view data.
Source: U.S. Bureau of Labor Statistics, Consumer Expenditure Surveys.

Transportation was the only major expenditure category on which all income quintiles spent more in 2018 than in 2017. The largest percentage declines in expenditures were recorded in the second income quintile's personal insurance and pensions, followed by apparel and services expenditures in the lowest income quintile. Double-digit growth rates in expenditures occurred in entertainment for the second income quintile (16.6 percent), personal insurance and pensions for the third and highest income quintiles ( 14.1 percent and 10.2 percent), and apparel and services expenditures for the third income quintile ( 12.7 percent). Six categories of expenditures were combined into "all other expenditures" in table C: alcoholic beverages, personal care products and services, reading, education, tobacco products and smoking supplies, and miscellaneous expenses. Expenditures in this category declined for the lowest and the highest income quintiles in 2018 from their 2017 levels. (See table C.)

## Expenditures on food by income quintile and generation

Food expenditures increased for 4 of the 5 income quintiles in 2018, while spending declined by 1.5 percent for the third income quintile. Percentage increases ranged from 0.9 percent for the lowest income quintile to 6.8 percent for the fourth quintile, without showing any clear patterns across the quintiles. Expenditures on food at home increased for 4 of the 5 quintiles, with a small decline in expenditures for the second quintile. The lowest income quintile had the largest percentage increase in spending on food at home (table C).

Spending on food away from home increased in 3 of the 5 quintiles, while spending declined by 5.9 percent in the lowest income quintile and by 4.8 percent in the third income quintile. For the fourth income quintile, the largest percentage increase in expenditures was on food away from home at 10.6 percent (table C).

Spending patterns on food at home and away from home show notable generational differences. Based on the birth year, the consumer unit's reference person in the CE data is categorized into a distinct generational group: Greatest generation (before 1928), Silent generation (1928-1945), Baby boomers (1946-1964), Generation X (1965-1980), and Millennial and post-Millennial generation (after 1980). ${ }^{3}$

Consumer units with younger reference persons showed a higher proportion of total food spending on food away from home, while consumer units with older reference persons had higher proportions on spending for food at home in 2018. (See chart 5.) The Millennials and post-Millennials devoted 47 percent of their total food spending on food away from home, compared with 35 percent for the Greatest generation. Some of the difference may be due directly to life-cycle effects. For example, the Baby Boomers are in the retirement age range and may have more time to prepare meals at home. Someone from the Silent generation may have an age-related health constraint that limits their access to restaurants. Nevertheless, other factors, such as income and family size, differ by generation and undoubtedly influence the allocation of the food budget as well. For further discussion of these differences, see Fun facts about Millennials: comparing expenditure patterns from the latest through the greatest generation and Consumer expenditures vary by age.

## Notes

${ }^{1}$ A consumer unit consists of either: (1) all members of a particular household who are related by blood, marriage, adoption, or other legal arrangements; (2) a person living alone or sharing a household with others or living as a roomer in a private home or lodging house or in permanent living quarters in a hotel or motel, but who is financially independent; or (3) two or more persons living together who use their income to make joint expenditure decisions.

2 Consumer Price Index - All Urban Consumers, U.S. Bureau of Labor Statistics, available at: https://data.bls.gov/ timeseries/CUUR0000SA0

3 Please refer to this BLS link for more details: https://www.bls.gov/bls/exit_BLS.htm?url=http://www.people-press.org/ 2015/09/03/the-whys-and-hows-of-generations-research/. Further, as the oldest members of the Millennial generation are well into adulthood, a new classification of "post-Millennials," also known as "Generation Z," has appeared to describe those who were born after 1996. Details on this cohort are available at https://www.pewresearch.org/fact-tank/ 2019/01/17/where-millennials-end-and-generation-z-begins/. The CE data in this report do not distinguish Millennials and post-Millennials.

## Technical Notes

The principal objective of the Consumer Expenditure Surveys (CE) is to collect information on the buying habits of U.S. consumers. Consumer expenditure data are used in a variety of research activities by government, business, labor, and academic analysts. In addition, the data are required for the regular revision of the Consumer Price Index (CPI) market basket.

First collected in 1888, the CE was conducted approximately every 10 years through the 1972-73 survey; annual collection began in late 1979. The CE is conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. The CE consists of two survey instruments with independent samples that were first implemented in the 1972-73 series. There is a Diary Survey completed by participating consumer units for two consecutive 1 -week periods and an Interview Survey in which expenditures of consumer units are obtained in four interviews over the course of 12 months, conducted at 3-month intervals. Results in this report are based on integrated data from both surveys. Survey participants record dollar amounts for goods and services purchased during the reporting period, regardless of whether payment is made at the time of purchase. Expenditure amounts include all sales and excise taxes for items purchased by the consumer unit. All business-related expenditures are excluded from both surveys, as are expenditures for which the consumer unit is reimbursed.

For the Diary survey, the CE Program draws a sample of 12,000 addresses per year, with approximately 10,000 of those addresses determined to be occupied housing units. The other 2,000 addresses are generally nonexistent, nonresidential, or vacant. Approximately 6,000 of those occupied housing units respond to the survey, and each of those households completes two weekly diaries for a total of 12,000 weekly diaries per year. Likewise, for the Interview survey, the CE Program visits 12,000 addresses per quarter, with 10,000 of those addresses having occupied housing units. Then approximately 6,000 of those occupied housing units respond to the survey for a total of 6,000 interviews per quarter. With the rotating panel, some consumer units rotate out of the survey each quarter, while others rotate in. Each consumer unit is interviewed once per quarter, for four consecutive quarters. Data are collected on an ongoing basis in 91 geographic areas of the United States.

The Interview Survey is designed to capture expenditure data that respondents can reasonably recall for a period of 3 months or longer. In general, these expenditures are relatively large, such as expenditures for real property, automobiles, and major appliances, or they occur on a regular basis, such as rent, utility payments, and insurance premiums. The Interview Survey also collects data on expenditures incurred on leisure trips. Including broad estimates of food spending, it is estimated that about 95 percent of expenditures are covered in the Interview Survey. Nonprescription drugs, household supplies, and personal care items are excluded.

The Diary Survey is designed to capture expenditures on small, frequently purchased items that are normally more difficult for respondents to recall buying over an extended period. Respondents keep detailed entries of expenses for food and beverages-both for food at home (e.g., purchased from grocery stores, convenience stores, farmers markets) and food away from home (e.g., purchased from restaurants, carry outs, employer and school cafeterias)-and for tobacco, housekeeping supplies, nonprescription drugs, personal care products and services, most apparel, and any other goods or services purchased within the period. Although this survey was designed to collect information on expenditures that could not be recalled easily over an extended period, respondents are asked to report all expenses, except those spent while traveling overnight or longer, that the consumer unit incurs during the survey week.

Integrated data from the Diary and Interview Surveys provide a complete accounting of consumer expenditures and income that neither survey is designed to do on its own. Data on some expenditure items are collected in only one of the surveys. For example, the Diary Survey does not collect information on reimbursements, whereas the Interview Survey does. Examples of expenditures for which reimbursements are included in the Interview Survey are medical care; automobile repairs; and construction, repairs, alterations, and maintenance of property. For items that are unique to one survey or the other, the choice of which survey to use as the source of data is obvious. However, there is considerable overlap in coverage between the surveys, and integrating the data involves a determination of the appropriate survey from which to select specific expenditure items. When data are available from both surveys, the BLS Consumer Expenditure Survey program (BLS CE program) uses statistical methods to determine which survey is more reliable. As a result, some items are selected from the Interview Survey, and others are selected from the Diary Survey. Because of the overlap in the item coverage between the two surveys, the BLS CE program reviews the survey source every 2 years and uses statistical methods to select the best source. See "CE Source Selection for Publication Tables" in the Consumer Expenditure Survey Anthology, 2011 (BLS Report, no. 1030), for source selection details.

The population and spending coverage of the CE differs from those used by the CPI. The CE data cover the total population including rural areas, whereas the CPI covers only the population in urban and metropolitan areas. With the latest CPI geographic revisions, efforts are being made to align the urban areas sampled by the CPI and the CE. Definitions of components also differ between the CE and CPI. For example, homeownership is treated differently in the two surveys: actual expenditures of homeownership are reported in the CE, whereas the CPI uses a rental equivalence approach that estimates the change in the cost of obtaining, in the rental marketplace, services equivalent to those provided by owner-occupied homes. (For an overview of the CPI methodology, see the Handbook of Methods "Consumer Price Index." https://www.bls.gov/opub/hom/pdf/cpi-20180214.pdf.)

## Interpreting the data

Expenditures are averages for consumer units with specified characteristics, regardless of whether a particular unit incurred an expense for a specific item during the recordkeeping period. The average expenditure for an item may be considerably lower than the expenditure by the consumer units that purchased the item. The less frequently an item is purchased, the greater the difference between the average for all consumer units and the average for those purchasing the item. Similarly, an individual consumer unit may spend more or less than the average, depending on its particular characteristics. Factors such as income, age of family members, geographic location, and personal preference also influence expenditures. In addition, even within groups with similar characteristics, the distribution of expenditures varies substantially. These points should be considered when comparing reported averages with individual circumstances. Users of these survey data should also keep in mind that prices for many goods and services have risen since the survey was conducted. For example, all prices, as measured by the CPI-U, increased 2.4 percent from 2017-18 (annual average index). In addition, sample surveys are subject to two types of error: sampling and nonsampling. Sampling errors occur because the data are collected from a sample representing the population, rather than from the entire population. Nonsampling errors result from the inability or unwillingness of respondents to provide correct information, differences in interviewers' abilities, mistakes in recording or coding, and other processing errors. For additional information on these types of errors see https://www.bls.gov/cex/csxfaqs.htm\#SamplingNonsamplingError.

## Standard tables, 1960-61, 1972-73, 1984-2018

Tables in this report include integrated data from both the Diary and Interview components of the CE, enabling data users to associate the full range of expenditures with consumers' demographic characteristics. Users can access the CE tables beginning with 1960-61, which have more detail than is given in this report. Also available are tables showing average annual data over a 2-year period for

- income before taxes, cross-tabulated by age, consumer unit size, or region;
- single consumers by gender, cross-tabulated by either income or age; and
- selected metropolitan statistical areas (MSAs).

## Detailed tables, 1984-2018

In addition, the CE also produces detailed prepublication tables, which contain additional subcategories of spending by demographic characteristics, but also have larger variances. They are available by request; email: CEXInfo@bls.gov. Prepublication tables at the All-consumer unit level are available on the research tables CE web page.

## Public-use microdata

The 2018 CE public-use microdata, including Interview Survey data, Diary Survey data, and paradata (information about the survey process), are available on the CE website for free electronic download. The Interview Survey files contain expenditure data in two different formats: MTBI files that present monthly values by coding items based on the CPI pricing scheme, and expenditure files that organize expenditures by the section of the Interview Survey questionnaire in which they are collected. Values on the expenditure files cover different periods depending on the specific questions asked, and the files also contain relevant nonexpenditure information not found on the MTBI files.

Beginning with the 2013 public-use microdata, the new estimates of local, state, and federal tax liabilities are included. The CE introduced these estimates to improve the quality of the surveyed tax liabilities, which suffered from low response rates. The respondent-provided tax data were still available in the public-use microdata for 2013, after which they were no longer collected. For more information on the improvements, see Improving Data Quality in the Consumer Expenditure Survey with TAXSIM, and for new applications of the tax estimates, see New estimates of Personal Taxes in the Consumer Expenditure Survey. Free public-use microdata are available online from the years 1980 to 2018.

## Other survey information

Other survey information available on the CE web page includes answers to frequently asked questions and a glossary of terms. Beginning with the 2000 data, estimates of standard errors for integrated Diary and Interview Survey data are also available.

The Consumer Expenditure program also publishes Beyond the Numbers articles, which present expenditure data within the context of various topics of interest. As of May 2020, the most recent articles are: How does consumer spending differ among households in California, Texas, and New York? A new BLS data product can tell us and Are
most Americans cutting the cord on landlines? Additional data also are presented in articles in the Monthly Labor Review (MLR). As of December 2019, the most recent MLR article using CE data is entitled, "Not fun for young and old alike: how the youngest and oldest consumers have fared in recession and recovery."

Information on the methodology used to calculate and collect CE data, including data quality, can be found in the CE Handbook of Methods. Also included are general articles and research papers using CE data, including documents in the CE research library.

For more detailed information on the availability of current and earlier data, contact the Division of Consumer Expenditure Surveys, Office of Prices and Living Conditions, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE, Washington, DC 20212-0001; call (202) 691-6900; email: CEXInfo@bls.gov; or visit the Consumer Expenditure Surveys page.
