## A Profile of the Working Poor, 2005

U.S. Department of Labor U.S. Bureau of Labor Statistics September 2007

Report 1001

n 2005, according to the U.S. Census Bureau, 37.0 million people, or 12.6 percent of the population, lived at or below the official poverty threshold. The majority of the Nation's poor were children and adults who had not participated in the labor force during the year. About 7.7 million of this group were classified as "working poor"-persons who, during the year, spent 27 weeks or more in the labor force (working or looking for work), but whose incomes still fell below the official poverty level. The U.S. Bureau of Labor Statistics began measuring the working poor in 1987 and has since reported annually about the demographic and labor force characteristics of this group. In 2005, persons 16 years and older who were in the labor force for 27 weeks or more living below poverty numbered 5.4 percent—little changed from 5.6 percent the prior year. The 2005 working-poor rate was 0.7 percentage point higher than its most recent low point of 4.7 percent in 2000. (See tables A and 1 and chart 1.) Additional highlights from the 2005 data include:

• Full-time workers were less likely to be among the working poor than were part-time workers. About 3.9 percent of the 118.7 million full-time workers were classified as working poor, compared with 11.6 percent of the 23.0 million part-time workers.

• Although working full-time (35 or more hours per week) substantially lowers a person's likelihood of being poor, nearly 6 of every 10 of the working poor who held a job during 2005 usually worked full-time.

• As workers achieve higher levels of education, their likelihood of being classified as working poor decreases. In 2005, the number of college graduates who were in the labor force for at least 27 weeks counted among the working poor was 1.7 percent, compared with 14.1 percent of those with less than a high school diploma.

• Among families with at least one member in the labor force for 27 weeks or more, those families including children under 18 years old were about four times more likely than those without children to live in poverty or to be among the working poor.

This report presents data on the relationship between labor

force activity and poverty in 2005 for workers and their families.

The specific income thresholds used to determine poverty status differed depending on whether the individuals were living with family members, with nonrelatives, or alone. For those living with family members, the poverty threshold was determined by the family's total income; for individuals not living in families, personal income was used as the determinant.

The data were collected in the 2006 Annual Social and Economic Supplement to the Current Population Survey. For a more detailed description of the source of the data and an explanation of the concepts and definitions used in this report, see the Technical Note.

#### **Demographic characteristics**

Of all persons in the labor force at least half of the year during 2005, about the same number of women and men were poor (4.0 million and 3.8 million, respectively). However, the working-poor rate—the proportion of persons in the labor force for at least 27 weeks who lived below the poverty level—was higher for women (6.1 percent) than for men (4.8 percent). The rates for both women and men were little changed from the prior year. (See table 2.)

Whites accounted for about 7 in 10 of the working poor in 2005. Blacks and Hispanics had the highest working-poor *rates*, 10.5 percent each. The rates for Whites and Asians, at 4.7 percent each, were less than half as high. The likelihood

Table A. Poverty status of persons and primary families in the labor force for 27 weeks or more, 2002–05 (Numbers in thousands)

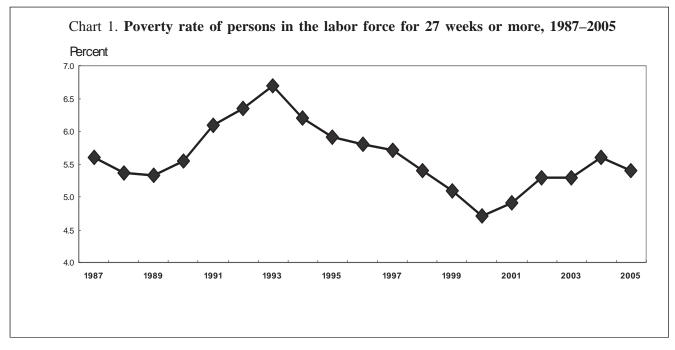

Characteristic	2002	2003	2004	2005
Total persons <sup>1</sup> In poverty Poverty rate Unrelated individuals Poverty rate Primary families <sup>2</sup> In poverty rate Poverty rate	139,728 7,359 5.3 29,847 2,584 8.7 63,352 3,973 6.3	140,007 7,429 5.3 29,898 2,472 8.3 63,567 4,167 6.6	140,908 7,836 5.6 30,694 2,742 8.9 63,912 4,261 6.7	142,824 7,744 5.4 31,422 2,846 9.1 64,360 4,094 6.4
		1	1	1

<sup>1</sup> Includes persons in families, not shown separately.

 $^{\rm 2}$  Primary families with at least one member in the labor force for more than half of the year.

NOTE: Updated population controls are introduced annually with the release of January data.

of being among the working poor was higher for White women and Black women than for their male counterparts (5.0 percent for White women, compared with 4.4 percent for White men and 13.0 percent for Black women, compared with 7.7 percent for Black men). Among Asians and Hispanics, men and women were about equally likely to be among the working poor.

Young workers continued to be more vulnerable to poverty than their older counterparts. This is due largely to young people's lower earnings and higher rates of unemployment. In 2005, among youth who were in the labor force for 27 weeks or more, 10.5 percent of 16- to 19-year-olds and 12.0 percent of 20- to 24-year-olds were living in poverty. This compared to 5.0 percent for workers aged 35 to 44 and 2.7 percent for those aged 55 to 64 years.

#### **Educational attainment**

The likelihood of being among the working poor decreases greatly as individuals achieve higher levels of education. Of all people in the labor force for more than half of 2005, those with less than a high school diploma were the most likely to be among the working poor (14.1 percent). High school graduates with no college had a lower working-poor rate—6.6 percent—and college graduates with either an associate's degree (3.4 percent) or a bachelor's degree or higher (1.7 percent) were even less likely to be among the working poor. Individuals with higher levels of education generally have greater access to higher paying jobs, such as management, professional, and related occupations, than those with lower levels of education. (See table 3.)

However, at almost all levels of educational attainment, Blacks and Hispanics were more likely to be among the working poor than were Whites or Asians. Additionally, the incidence of poverty was higher for Black women than Black men for all levels of education except for college graduates. Among college graduates, the working-poor rate for Black women (2.4 percent) was about the same as the rate for Black men (3.0 percent). For those with less than a high school diploma, the likelihood of being among the working poor for Black women (29.4 percent) was nearly twice that for Black men (15.8 percent). Among high school graduates (no college), the gap narrowed with Black women at 17.0 percent and Black men at 8.5 percent. Within each of the other race groups—Whites, Asians, and Hispanics—men and women had similar working-poor rates at most levels of educational attainment.

#### Occupation

The likelihood of being among the working poor varies widely by occupation. (Individuals are classified by occupation based on the job they held the longest during the year.) Those who had worked in occupations requiring higher levels of education and offering higher earnings had a lower incidence of being poor. For example, those employed in management, professional, and related occupations had the lowest workingpoor rate (1.8 percent). By comparison, workers in service occupations, which typically do not require higher levels of education and are characterized by lower average earnings, had the highest working-poor rate, 10.8 percent. About 6.8 percent of individuals who had worked in natural resources, construction, and maintenance occupations were classified as working poor. Within this broad occupational category, the working-poor rates for those in farming, forestry, and fishing jobs was 13.7 percent and for those in construction occupations, 8.1 percent. During 2005, about two-thirds of the working poor who had been employed at some point during the year worked in one of the following three occupational groups: Service occupations; sales and office occupations; and production, transportation, and material moving occupations. (See table 4.)

#### Families

In 2005, there were 4.1 million families classified as living below the poverty level, which had at least one family member in the labor force for half the year or more—6.4 percent of all such families—were classified as living below the poverty level. The incidence of poverty among families was down slightly from 6.7 percent the previous year. Among families with one member in the labor force for at least 27 weeks in 2005, marriedcouple families were less likely (8.3 percent) to fall below the poverty level than either families maintained by women (22.4 percent) or families maintained by men (11.7 percent).

The working-poor rate was higher in families with children than in those without children. Of all primary families, those with children under age 18 had a working-poor rate of 9.5 percent; families without children had a working-poor rate of 2.4 percent. Among married-couple families with children, the proportion classified as working poor was 5.5 percent. Among families maintained by women with children under age 18, the working-poor rate was 22.6 percent; for families maintained by men with children, it was 12.4 percent. (See table 5.)

### **Unrelated individuals**

In 2005, there were 31.4 million unrelated individuals in the labor force for half the year or longer, and 2.8 million lived below the poverty level. The unrelated individuals category includes persons who live by themselves or with others not related to them. Their working-poor rate was 9.1 percent in 2005, about the same as in 2004 (8.9 percent). (See tables 6 and A.)

In 2005, of the 2.8 million people in the category who lived below the poverty level, 6 in every 10 lived with at least one other person. Persons living with unrelated individuals had a working-poor rate of 12.2 percent, while persons living alone had a rate of 6.3 percent. (See table 7.) Unrelated individuals with low incomes often live with others out of necessity. Many of those who choose to live alone do so because they have sufficient income to support themselves. Poverty status for unrelated individuals in either living situation is determined by each person's individual resources. However, the pooling of resources and sharing of expenses may permit some individuals who are technically classified as poor to live above the poverty level. Among all unrelated individuals living alone or with others not related to them and who were in the labor force for 27 weeks or more, teenagers were those most likely to be working poor. Their working-poor rate was 37.0 percent, in 2005; this was about the same as the rates for the previous several years. The working-poor rate for men who were living alone or with nonrelatives (8.5 percent) was lower than the rate for women in similar living situations (9.8 percent). In 2005, the rates for Hispanics and Blacks were 13.0 percent and 11.8 percent, respectively, and the rate for Whites was 8.4 percent.

#### Labor market problems

Persons in the labor force whose income falls below the poverty threshold have often experienced one or more of the following three major labor market problems: Unemployment, low earnings, and involuntary part-time employment. (See the Technical Note for detailed definitions.) Among those who participated in the labor force for 27 weeks or longer in 2005 and who usually worked in full-time wage and salary jobs, 3.9 million, or 3.5 percent, lived below the poverty level. This proportion was unchanged from the prior year. This analysis is limited to full-time wage and salary workers. (See table 8.)

Eight out of every 10 persons among the working poor who usually worked full time in wage and salary jobs experienced at least one labor market problem, in 2005. Low earnings continued to be the most common problem, with about twothirds of full-time wage and salary workers experiencing low earnings alone or in combination with other labor market problems. About 1 in 3 experienced unemployment, either alone or in combination with other labor market problems. Only 4 percent experienced all three labor market problems low earnings, unemployment, and involuntary part-time work.

In 2005, some 772,000 of the working poor, or about 1 in 5, who usually worked full-time in wage and salary jobs did not experience any of the three main labor market problems in 2005; that proportion was about the same as the prior year. Their poverty status may have been associated with other factors, including short-term employment, some weeks of voluntary part-time work, or a family structure that increases the likelihood of poverty.

### **Technical Note**

### Source of data

The primary source of data in this report is the 2006 Annual Social and Economic Supplement to the Current Population Survey (CPS). The CPS is a monthly survey of 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics to collect demographic, social, and economic information about persons 16 years of age and older. The Annual Social and Economic Supplement is asked of part of the CPS samples for February and April and of the entire sample for March, making up a total of 78,000 households. Work experience and income data collected in the Annual Social and Economic Supplement refer to activity in the entire prior calendar year.

The estimates in this report are based on a sample and, consequently, may differ from figures that would have been obtained from a complete count using the same questionnaire and procedures. Sampling variability may be relatively large in cases where the numbers are small. Thus, small estimates, or small differences between estimates, should be interpreted with caution. For a detailed explanation of the Annual Social and Economic Supplement to the CPS, its sampling variability, and more extensive definitions than those provided below, see *Income, Poverty, and Health Insurance Coverage in the United States: 2005*, Current Population Reports, series P-60, no. 231 (U.S. Census Bureau, August 2006). This publication also is available on the U.S. Census Bureau Web site at **www.census.gov/prod/2006pubs/p60-231.pdf**.

Information in this report will be made available to sensoryimpaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: 1-800-877-8339. This material is in the public domain and, with appropriate credit, may be reproduced without permission.

For more information on the data provided in this report, write to the U.S. Bureau of Labor Statistics, Division of Labor Force Statistics, Room 4675, 2 Massachusetts Avenue NE, Washington, DC 20212; e-mail: *cpsinfo@bls.gov*; or telephone (202) 691-6378.

#### **Comparability of estimates**

The 2005 estimates in this report, which were collected in the 2006 Annual Social and Economic Supplement to the CPS, are not strictly comparable with data for 2004 and earlier years, because of the introduction in January 2006 of revised populations controls used in the CPS. For additional information, see "Adjustments to Household Survey Population Estimates in January 2006," in the February 2006

issue of *Employment and Earnings*, available on the Internet at **www.bls.gov/cps/cps/6adj.pdf**.

#### **Concepts and definitions**

**Poverty classification.** Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by Federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families, based on factors such as family size and the number of children under 18 years of age.

The actual poverty thresholds vary in accordance with the makeup of the family. In 2005, the average poverty threshold for a family of four was \$19,971; for a family of nine or more persons, the threshold was \$40,288; and for an unrelated individual aged 65 or older, it was \$9,367. Poverty thresholds are updated each year to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). The thresholds do not vary geographically. For more information, see *Income, Poverty, and Health Insurance Coverage in the United States:* 2005, cited above.

*Low earnings.* The low earnings level, as first developed in 1987, represented the average of the real value of the minimum wage between 1967 and 1987 for a 40-hour workweek. The base year of 1967 was chosen because that was the first year in which minimum-wage legislation covered essentially the same broad group of workers that currently is covered. The low earnings level has subsequently been adjusted each year using the CPI-U, so that the measure maintains the same real value that it held in 1987. In 2005, the low earnings threshold was \$287.45 per week. For a more complete definition, see Bruce W. Klein and Philip L. Rones, "A profile of the working poor," *Monthly Labor Review*, October 1989, pp. 3-13.

*Income.* Data on income are limited to money income received in the calendar year preceding the supplement, before personal income taxes and payroll deductions. They do not include the value of noncash benefits such as food stamps, Medicare, Medicaid, public housing, and employer-provided benefits. For a complete definition of the income concept, see *Income*, *Poverty, and Health Insurance Coverage in the United States:* 2005, cited above.

*In the labor force.* Persons in the labor force are those who worked or looked for work sometime during the calendar year preceding the supplement. The number of weeks in the labor

force is accumulated over the entire year. The focus in this report is on persons in the labor force for 27 weeks or more.

*Involuntary part-time workers.* These are persons who, in at least 1 week of the year, worked fewer than 35 hours because of slack work or business conditions, or because they could not find full-time work. The number of weeks of involuntary part-time work is accumulated over the year.

*Occupation.* Refers to the occupation in which a person worked the most weeks during the calendar year.

**Unemployed.** Unemployed persons are those who looked for work while not employed or those who were on layoff from a job and expecting recall. The number of weeks unemployed is accumulated over the entire year.

*Family*. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption. The count of families used in this report includes only primary families. A primary family includes the reference person (householder) and all people living in the household who are related to the reference person. Families are classified either as married-couple families or as those maintained by men or women without spouses present. Family status is determined at the time of the interview, and, thus, may be different from that of the previous year.

*Unrelated individuals.* These are persons who are not living with any relatives. Such individuals may live alone, reside in a nonrelated family household, or live in group quarters with other unrelated individuals.

**Related children.** Data on related children refer to own children (including sons, daughters, and step- or adopted children) of the husband, wife, or person maintaining the family and all other children related to the householder by birth, marriage, or adoption.

*Race.* White, Black or African American, and Asian are terms used to describe the race of people. People in these categories are those who selected that race group only. Data for the remaining race categories—American Indian or Alaska Native, Native Hawaiian or Other Pacific Islander—and for people who selected more than one race category are included in totals but are not shown separately, because the number of survey respondents is too small to develop estimates of sufficient quality for publication. In the enumeration process, race is determined by the household respondent.

*Hispanic or Latino ethnicity.* This term refers to persons who identified themselves in the CPS enumeration process as being Spanish, Hispanic, or Latino. People whose ethnicity is identified as Hispanic or Latino may be of any race.

### Table 1. People in the labor force: Poverty status and work experience by weeks in the labor force, 2005

(Numbers in thousands)

	<b>T</b> ( 1) (1) (1)	27 weeks or more	e in the labor force

<sup>1</sup> Number below the poverty level as a percent of the total in the <sup>2</sup> Data not shown where base is less than 80,000.
 NOTE: Estimates for the above race groups (white, black or African

American, and Asian) do not sum to totals because data are not presented for all races. In addition, people whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

#### Table 3. People in the labor force for 27 weeks or more: Poverty status by educational attainment, race, Hispanic or Latino ethnicity, and sex, 2005

Number below the poverty level as a percent of the total in the labor force for 27 weeks or more who worked during the year.
 <sup>2</sup> Includes the long-term unemployed with no previous work experience and a small number of people whose last job was in the Armed Forces.
 <sup>3</sup> Data not shown where base is less than 80,000.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash represents or rounds to zero. Source: U.S. Bureau of Labor Statistics.

## Table 5. Primary families: Poverty status, presence of related children, and work experience of family members in the labor force for 27 weeks or more, 2005

(Numbers in thousands)

Characteristic	Total families	At or above poverty level	Below poverty level	Rate <sup>1</sup>
Total primary families	64,360	60,266	4,094	6.4
With related children under 18 years	36,075	32,658	3,417	9.5
Without children	28,285	27,608	676	2.4
With one member in the labor force	27,498	24,003	3,494	12.7
With two or more members in the labor force	36,862	36,263	600	1.6
With two members	31,025	30,481	544	1.8
With three or more members	5,837	5,782	55	1.0
Married-couple families	48,899	47,111	1,787	3.7
With related children under 18 years	26,287	24,846	1,441	5.5
Without children	22,612	22,265	347	1.5

Data on families include people in primary families and unrelated subfamilies.
 Number below the poverty level as a percent of the total.
 Data not shown where base is less than 80,000.

Table 7. Unrelated individuals in the labor force for 27 weeks or more: Poverty status by age, sex, race, Hispanic or Latino ethnicity, and living arrangement, 2005

(Numbers in thousands)

Characteristic	Total	At or above poverty level	Below poverty level	Rate <sup>1</sup>
Age and sex				
Total unrelated individuals	31,422	28,576	2,846	9.1
	537	338	199	37.0
	4,311	3,423	888	20.6
	24,992	23,275	1,717	6.9
	1,583	1,541	42	2.7

Women Race and Hispanic or Latino ethnicity White Men	13,836	12,479	1,357	9.8
	25,346	23,205	2,140	8.4
	14,333	13,215	1,118	7.8
Women	4,106 2,143 1,963	3,620 1,906 1,714	1,022 486 236 249	9.3 11.8 11.0 12.7
Asian	1,159	1,051	108	9.3
Men	637	578	59	9.3
Women	522	474	49	9.3
Hispanic or Latino ethnicity Men Women Living arrangement	3,588 2,546 1,042	3,120 2,241 879	467 304 163	13.0 12.0 15.6
Living alone	16,731	15,683	1,047	6.3
Living with others	14,691	12,893	1,798	12.2

<sup>1</sup> Number below the poverty level as a percent of the total in the labor force for 27 weeks or more. NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are

not presented for all races. In addition, people whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

# Table 8. People in the labor force for 27 weeks or more: Poverty status and labor market problems of full-time wage and salary workers, 2005

(Numbers in thousands)

Labor market problems	Total	At or above poverty level	Below poverty level	Rate <sup>1</sup>
Total, full-time wage and salary workers	111,556	107,657	3,899	3.5
No unemployment, involuntary part-time employment, or low earnings $^{2}\ \ldots \ldots$	93,417	92,645	772	.8
Unemployment only Involuntary part-time employment only Low earnings only		5,223 2,272 5,489	424 61 1,692	7.5 2.6 23.6
Unemployment and involuntary part-time employment Unemployment and low earnings Involuntary part-time employment and low earnings	1,220	739 721 362	86 499 204	10.4 40.9 36.0
Unemployment, involuntary part-time employment, and low earnings	367	206	160	43.8
Unemployment (alone or with other problems) Involuntary part-time employment (alone or with other problems) Low earnings (alone or with other problems)		6,888 3,580 6,778	1,169 511 2,556	14.5 12.5 27.4

 $^1\,$  Number below the poverty level as a percent of the total in the labor force for 27 weeks or more.  $^2\,$  The low-earnings threshold in 2005 was \$287.45 per week.
