## **Consumer Price Index, Northeast Region — September 2014** **Regional Prices Unchanged Over the Month; Up 1.2 Percent Over the Year**

The Consumer Price Index for All Urban Consumers (CPI-U) in the Northeast was unchanged in September, the U.S. Bureau of Labor Statistics reported today. A 2.4-percent decline in the energy index since August was offset by increases in the all items less food and energy index and the food index, up 0.2 and 0.4 percent, respectively. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the last 12 months, the CPI-U increased 1.2 percent, due mainly to an advance in the all items less food and energy index, up 1.5 percent. (See [chart 1](#) and [table A](#).) The food index also rose since September 2013, up 2.4 percent, while the energy index declined 3.1 percent. (See [table 1](#).)

**Chart 1. 12-month percent change in CPI for All Urban Consumers (CPI-U), Northeast region, September 2011 to September 2014 (not seasonally adjusted)**

Source: U.S. Bureau of Labor Statistics.

### Food

Over the month, food prices rose 0.4 percent, following a 0.2-percent decrease in August. Prices for the food at home component increased 0.5 percent and those for food away from home edged up 0.3 percent.

Over the year, the food index advanced 2.4 percent. Prices were higher for both the food at home and food away from home components, up 2.2 and 2.7 percent, respectively, since September 2013.

### Energy

The energy index, which includes prices for household and transportation fuels, declined for the fourth consecutive month, down 2.4 percent since August and 5.5 percent since May. The one-month decrease was due mainly to a 2.6-percent decline in gasoline prices. Prices were also lower for electricity (-2.4 percent) and utility (piped) gas service (-1.8 percent) in September.

Energy prices declined over the year, down 3.1 percent, reflecting price decreases for all three major components. Gasoline prices were down 4.7 percent since September 2013; prices were also lower for utility (piped) gas service and electricity, down 4.0 and 0.7 percent, respectively.

### All items less food and energy

The index for all items less food and energy edged up 0.2 percent over the month. A seasonal increase in prices for apparel (3.7 percent) led the advance. Higher prices for medical care (0.3 percent), among others, were moderated by lower prices for recreation and household furnishings and operations (-0.1 percent each) since August.

The all items less food and energy index rose 1.5 percent over the year. The advance primarily reflected a 2.5-percent increase in prices for shelter. Lower prices for household furnishings and operations (-1.0 percent) and recreation (-0.1 percent) moderated the increase in the all items less food and energy index since last September.

**The October 2014 Consumer Price Index for the Northeast region is scheduled to be released on November 20, 2014, at 8:30 a.m. (ET).**

### Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 88 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 29 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 4,000 housing units and approximately 26,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at [www.bls.gov/opub/hom/homch17\\_a.htm](http://www.bls.gov/opub/hom/homch17_a.htm).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **NOTE: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The Northeast region is comprised of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339.

Footnotes

(1) This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

(2) Indexes on a December 1982=100 base.

(3) Indexes on a December 1997=100 base.

(4) Special index based on a substantially smaller sample.

(5) Indexes on a December 1993=100 base.

Note: Index applies to a month as a whole, not to any specific date.
