## Consumer Price Index, Northeast Region – November 2017

### Regional prices unchanged over the month and up 1.6 percent over the year

The Consumer Price Index for All Urban Consumers (CPI-U) in the Northeast was unchanged in November, the U.S. Bureau of Labor Statistics reported today. Sheila Watkins, the Bureau's regional commissioner, noted that a 2.0-percent increase in the energy index was offset by decreases in the all items less food and energy index and the food index, down 0.1 and 0.2 percent, respectively. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the last 12 months, the Northeast all items CPI-U increased 1.6 percent, due mostly to advances in the all items less food and energy index and the energy index, up 0.9 and 9.8 percent, respectively. (See [chart 1](#) and [table A](#).) The food index also increased, up 1.6 percent over the year. (See [table 1](#).)

**Chart 1. Over-the-year percent change in CPI-U, Northeast region, November 2014–November 2017**

Source: U.S. Bureau of Labor Statistics.

### Food

The food index edged down 0.2 percent since October. Prices for food at home declined 0.5 percent, while prices for food away from home edged up 0.2 percent.

From November 2016 to November 2017, the food index increased 1.6 percent, as prices for food away from home increased 2.4 percent and prices for food at home rose 1.1 percent.

## Energy

The energy index, which includes prices for household and transportation fuels, increased 2.0 percent in November, due largely to an 8.2-percent increase in utility (piped) gas service prices. Prices were also higher for gasoline, up 1.2 percent, while prices for electricity inched down 0.1 percent.

The energy index advanced 9.8 percent since November 2016. The increase was mostly due to a 14.9-percent rise in gasoline prices. Prices also increased over the year for utility (piped) gas service (12.1 percent) and electricity (1.7 percent).

## All items less food and energy

The index for all items less food and energy inched down 0.1 percent over the month. Price decreases for categories including apparel (-4.9 percent) and recreation (-0.1 percent) were moderated by higher prices for new and used motor vehicles (0.7 percent), among others.

The index for all items less food and energy increased 0.9 percent since November 2016, led by higher prices for shelter (1.5 percent) and medical care (2.1 percent), among others. Meanwhile, prices were lower for education and communication (-1.3 percent) and apparel (-1.9 percent).

**Table A. Northeast region CPI-U 1-month and 12-month percent changes, all items index, not seasonally adjusted**

**The Consumer Price Index for December 2017 is scheduled to be released Friday, January 12, 2018, at 8:30 a.m. (ET).**

## Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 89 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers approximately 28 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 4,000 housing units and approximately 26,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at [www.bls.gov/opub/hom/pdf/homch17.pdf](http://www.bls.gov/opub/hom/pdf/homch17.pdf).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The Northeast region is comprised of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
