## **Average Energy Prices, Washington-Arlington-Alexandria – June 2018**

Gasoline prices averaged \$2.888 a gallon in the Washington-Arlington-Alexandria area in June 2018, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Sheila Watkins noted that area gasoline prices were 19.9 percent higher than last June when they averaged \$2.408 per gallon. Washington area households paid an average of 13.0 cents per kilowatt hour (kWh) of electricity in June 2018, nearly unchanged from the 13.2 cents per kWh in June 2017. The average price of utility (piped) gas at \$1.165 per therm in June 2018 was down 18.2 percent from \$1.424 per therm a year earlier. (Data in this release are not seasonally adjusted; accordingly, over-the-year-analysis is used throughout.)

At \$2.888 a gallon, Washington area consumers paid close to the national average of \$2.970 for a gallon of gasoline in June 2018. Last June, gasoline prices in Washington were also close to the national average. From 2014 to 2016, prices for a gallon of gasoline in Washington differed from the U.S. average by less than 1.7 percent in June. (See [chart 1](#) and [table 1](#).)

**The Consumer Price Index for July 2018 is scheduled to be released on Friday, August 10, 2018, at 8:30 a.m. (ET).**

### Technical Note

Average prices are estimated from Consumer Price Index (CPI) data for selected commodity series to support the research and analytic needs of CPI data users. Average prices for electricity, utility (piped) gas, and gasoline are published monthly for the U.S. city average, the 4 regions, 9 divisions, 2 population size classes, 8 region/size-class cross-classifications, and the 23 largest local index areas. For electricity, average prices per kilowatt-hour (kWh) are published. For utility (piped) gas, average prices per therm are published. For gasoline, the average price per gallon is published. Average prices for commonly available grades of gasoline are published as well as the average price across all grades.

All eligible prices are converted to a price per normalized quantity. These prices are then used to estimate a price for a defined fixed quantity. The average price per kilowatt-hour represents the total bill divided by the kilowatt-hour usage. The total bill is the sum of all items applicable to all consumers appearing on an electricity bill including, but not limited to, variable rates per kWh, fixed costs, taxes, surcharges, and credits. This calculation also applies to the average price per therm for utility (piped) gas.
