Consumer Price Index, Baltimore-Columbia-Towson – August 2020 **Area prices increased 0.5 percent since June; up 0.7 percent over the year**

The Consumer Price Index for All Urban Consumers (CPI-U) for Baltimore-Columbia-Towson increased 0.5 percent from June to August, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Sheila Watkins noted that the recent two-month increase was mostly due to a rise in the all items less food and energy index, up 0.7 percent. The energy index also rose since June, up 2.3 percent, while the food index decreased 1.5 percent. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the last 12 months, the CPI-U increased 0.7 percent. The over-the-year rise was due to increases in the all items less food and energy index (0.8 percent) and the food index (3.4 percent). (See [chart 1](#).) The energy index dropped over the year, down 5.6 percent. (See [table 1](#).)

Chart 1. Over-the-year percent change in CPI-U, Baltimore-Columbia-Towson, MD, December 2018–August 2020

Source: U.S. Bureau of Labor Statistics.

Food

The food index declined over the last two months, down 1.5 percent. Prices decreased for both food at home (-2.5 percent) and for food away from home (-0.4 percent) since June. Within the food at home component, prices were lower for uncooked ground beef and eggs, while prices were higher for milk, among others.

Over the year, the food index increased 3.4 percent. Prices rose for both food at home (4.5 percent) and for food away from home (2.3 percent).

Energy

The energy index, which includes prices for household and transportation fuels, increased 2.3 percent since June, led by higher prices for gasoline (8.1 percent). Prices for utility (piped) gas service also increased over the last two months, up 0.8 percent, while those for electricity declined 3.4 percent.

Over the year, the energy index decreased 5.6 percent. Prices were lower for gasoline, dropping 12.1 percent. Prices increased for electricity and utility (piped) gas service, up 1.3 and 6.9 percent, respectively, since August 2019.

All items less food and energy

The index for all items less food and energy increased 0.7 percent from June to August. Higher prices for new and used motor vehicles (2.8 percent) and medical care (2.3 percent), among others, were moderated by lower prices for apparel (-2.5 percent).

The index for all items less food and energy increased 0.8 percent since August 2019, led by higher prices for shelter (1.8 percent) and new and used motor vehicles (2.5 percent). Prices were lower for recreation (-2.5 percent) and apparel (-5.0 percent).

The Consumer Price Index for October 2020 is scheduled to be released Thursday, November 12, 2020 at 8:30 am (ET).

Coronavirus (COVID-19) Pandemic Impact on August 2020 Consumer Price Index Data

Data collection by personal visit for the Consumer Price Index (CPI) program has been suspended since March 16, 2020. When possible, data normally collected by personal visit were collected either online or by phone. Additionally, data collection in August was affected by the temporary closing or limited operations of certain types of establishments. These factors resulted in an increase in the number of prices considered temporarily unavailable and imputed.

While the CPI program attempted to collect as much data as possible, many indexes are based on smaller amounts of collected prices than usual, and a small number of indexes that are normally published were not published this month. Additional information is available at www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm.

Technical Note

The Consumer Price Index for Baltimore-Columbia-Towson is published bi-monthly. The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 93 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers approximately 29 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 75 urban areas across the country from about 5,000 housing units and approximately 22,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at www.bls.gov/cpi and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at www.bls.gov/opub/hom/pdf/homch17.pdf.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The **Baltimore-Columbia-Towson, MD, Core Based Statistical Area** includes Anne Arundel, Baltimore, Baltimore City, Carroll, Harford, Howard, and Queen Anne's Counties in Maryland.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
