Fatal Work Injuries in the Baltimore Area — 2018

Fatal work injuries totaled 58 in 2018 for the Baltimore-Columbia-Towson, MD Metropolitan Statistical Area, the U.S. Bureau of Labor Statistics reported today. Sheila Watkins, the Bureau's regional commissioner, noted that the number of work-related fatalities in the Baltimore area increased by 13 from the previous year. Fatal occupational injuries in the area have ranged from a high of 59 in 2006 to a low of 28 in 2011. (See [chart 1](#).)

Nationwide, a total of 5,250 fatal work injuries were recorded in 2018, up from the 5,147 fatal injuries in 2017, according to the results from the Census of Fatal Occupational Injuries (CFOI) program.

Chart 1. Total fatal occupational injuries, Baltimore area, 2009-2018

SOURCE: U.S. Bureau of Labor Statistics.

Type of incident

In the Baltimore area, violence and other injuries by persons or animals resulted in 18 fatal work injuries and exposure to harmful substances or environments accounted for 15 fatalities. These two major categories accounted for 57 percent of all workplace fatalities in the Baltimore area. (See [table 1](#).) The number of worker fatalities from violence and other injuries by persons or animals increased by eight from the previous year and worker deaths due to exposure to harmful substances or environments increased by six. In 2018, 10 of the 15 fatalities due to exposure to harmful substances or environments were unintentional overdoses from the nonmedical use of drugs or alcohol while at work.

Contact with objects and equipment was the third-most frequent fatal work event with 10 fatalities. The number of worker deaths due to contact with objects and equipment increased by five over the year.

Nationally, transportation incidents was the most frequent fatal workplace event in 2018, accounting for 40 percent of fatal work injuries. (See [chart 2](#).) Violence and other injuries by persons or animals was the second-most common fatal event (16 percent), followed by falls, slips, and trips (15 percent) and contact with objects and equipment (15 percent).

Chart 2. Fatal occupational injuries by selected event, United States and Baltimore area, 2018

Industry

The private construction industry sector had the largest number of fatalities in the Baltimore area with 15, same as in the previous year. (See [table 2](#).) The two most frequent fatal events in the private construction sector were exposure to harmful substances or environments with five and contact with objects and equipment with four.

The administrative and support and waste management and remediation services sector within private industry had eight workplace fatalities in 2018, an increase of three over the year.

Occupation

Transportation and material moving occupations had the highest number of workplace fatalities with 14, followed by construction and extraction occupations with 11. (See [table 3](#).) The majority of the fatalities within the transportation and material moving group were heavy and tractor-trailer truck drivers (6). First-line supervisors of construction trades and extraction workers accounted for three fatalities, as did roofers.

Contracted Workers

A contractor is defined as a worker employed by one firm but working at the behest of another firm that exercises overall responsibility for the operations at the site of the fatal injury. In 2018, the Baltimore area had 13 fatal injuries to workers identified as fitting the contractor criteria; of those, 5 were the result of contact with objects and equipment.

Additional highlights

- Men accounted for 84 percent of the work-related fatalities in the Baltimore area, lower the national share of 92 percent. (See [table 4](#).) Exposure to harmful substances or environments made up 29 percent of the fatalities for men in the Baltimore area.
- White, non-Hispanic workers accounted for 53 percent of those who died from a workplace injury while Black or African American, non-Hispanic workers made up 28 percent of Baltimore's fatal injuries at work. Nationwide, White, non-Hispanic workers accounted for 65 percent of work-related deaths, while Black or African American, non-Hispanic workers represented 12 percent of the national share.
- Workers 25-54 years old accounted for 55 percent of the area's work-related fatalities in 2018, compared to 58 percent of on-the-job fatalities nationally. Over the year, fatalities of workers 55 years of age and older doubled, accounting for 38 percent of all work related fatalities. Nationally, workers 55 years of age and older accounted for 35 percent of all on the job fatalities.
- Of the 58 fatally-injured workers in the Baltimore area, 83 percent worked for wages and salaries; the remainder were self-employed. The most frequent fatal event for wage and salary workers was violence and other injuries by persons or animals with 16 worker deaths; for self-employed workers, exposure to harmful substances or environments was the most frequent fatal event with 4 fatalities.
- Fifty percent of workplace fatalities in the Baltimore area occurred on a Wednesday or Thursday. These two days accounted for 35 percent of workplace fatalities nationally.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries (CFOI), part of the Bureau of Labor Statistics (BLS) Occupational Safety and Health Statistics (OSHS) program, is a count of all fatal work injuries occurring in the U.S. during the calendar year. The CFOI uses a variety of state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This ensures counts are as

complete and accurate as possible. For the 2018 national data, over 24,800 unique source documents were reviewed as part of the data collection process. For technical information and definitions for the CFOI, see the BLS Handbook of Methods on the BLS website at www.bls.gov/opub/hom/cfoi/home.htm.

Federal/State agency coverage. The CFOI includes data for all fatal work injuries, some of which may be outside the scope of other agencies or regulatory coverage. Comparisons between CFOI counts and those released by other agencies should account for the different coverage requirements and definitions used by each agency. For more information on the scope of CFOI, see www.bls.gov/iif/cfoiscope.htm and www.bls.gov/opub/hom/cfoi/concepts.htm.

Acknowledgments. BLS thanks the Maryland Department of Labor for their efforts in collecting accurate, comprehensive, and useful data on fatal work injuries. BLS also appreciates the efforts of all federal, state, local, and private sector entities that provided source documents used to identify fatal work injuries. Among these agencies are the Occupational Safety and Health Administration; the National Transportation Safety Board; the U.S. Coast Guard; the Mine Safety and Health Administration; the Office of Workers' Compensation Programs (Federal Employees' Compensation and Longshore and Harbor Workers' Compensation divisions); the Federal Railroad Administration; the National Highway Traffic Safety Administration; state vital statistics registrars, coroners, and medical examiners; state departments of health, labor, and industrial relations and workers' compensation agencies; state and local police departments; and state farm bureaus.

Area definitions. The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget, Bulletin Number 13-01, February 2013. A detailed list of the geographic definitions is available at <https://www.bls.gov/bls/omb-bulletin-13-01-revised-delineations-of-metropolitan-statistical-areas.pdf>.

The **Baltimore-Columbia-Towson, MD Metropolitan Statistical Area (MSA)** consists of Anne Arundel, Baltimore, Carroll, Harford, Howard, and Queen Anne's Counties and Baltimore City in Maryland.

Information in this release is available to sensory-impaired individuals. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Table 1. Fatal occupational injuries by event or exposure, Baltimore-Columbia-Towson, MD, 2017-2018

Event of Exposure ⁽¹⁾	2017	2018	
	Number	Number	Percent
Total	45	58	100
Violence and other injuries by persons or animals	10	18	31

Struck by powered vehicle nontransport	-	3	5
Caught between rolling powered vehicle and other object	-	1	2
Struck by swinging part of powered vehicle	-	1	2
Struck by falling object or equipment	2	3	5
Caught in or compressed by equipment or objects	-	1	2
Caught in running equipment or machinery	-	1	2
Caught in running equipment or machinery during regular operation	-	1	2
Struck, caught, or crushed in collapsing structure, equipment, or material	-	3	5
Excavation or trenching cave-in	-	1	2
Struck, caught, or crushed in other collapsing structure or equipment	-	2	3

Footnotes:

(1) Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

Note: Data for all years are final. Totals for major categories may include subcategories not shown separately. Percentages may not add to totals because of rounding. CFOI fatal injury counts exclude illness-related deaths unless precipitated by an injury event. Dashes indicate no data reported or data that do not meet publication criteria.
