## Virginia Beach Area Employment — June 2019

### Local Rate of Employment Growth Below the National Average

Total nonfarm employment for the Virginia Beach Metropolitan Statistical Area stood at 810,500 in June 2019, up 0.8 percent over the year, the U.S. Bureau of Labor Statistics reported today. During the same period, the national job count increased 1.5 percent. Sheila Watkins, the Bureau’s regional commissioner, noted that the June increase was the third consecutive month of over-the-year job increases in the Virginia Beach metropolitan area. (See [chart 1](#) and [table 1](#). The Technical Note at the end of this release contains the metropolitan area definition. All data in this release are not seasonally adjusted; accordingly, over-the-year analysis is used throughout.)

**Chart 1. Total nonfarm employment, over-the-year percent change in the United States and Virginia Beach metropolitan area, June 2014–June 2019**

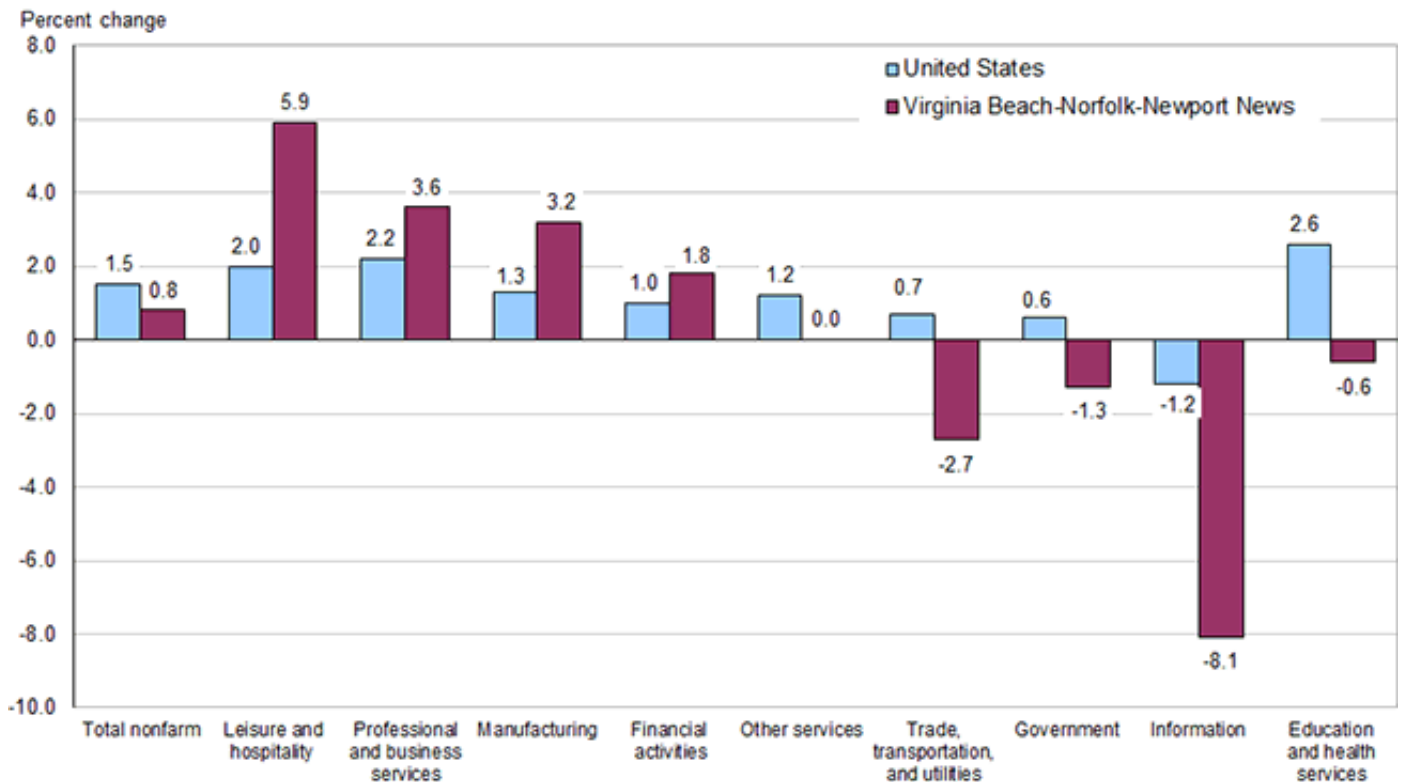

Source: U.S. Bureau of Labor Statistics.

In the Virginia Beach metropolitan area, leisure and hospitality had the largest employment increase from June 2018 to June 2019, adding 5,900 jobs. The local rate of job growth in leisure and hospitality was 5.9 percent, almost three times this industry’s national rate increase of 2.0 percent.

Virginia Beach’s professional and business services supersector had the second largest increase over the year, adding 4,200 jobs. The local rate of job growth in the supersector was 3.6 percent, faster than the national rate of 2.2 percent.

Two other supersectors had job increases greater than 1,000 over the year. Manufacturing added 1,800 jobs, and mining, logging, and construction added 1,500 jobs. The local rate of job growth in manufacturing was 3.2 percent, more than twice as fast as the 1.3-percent gain nationally. (See [chart 2.](#))

**Chart 2. Total nonfarm selected industry supersector employment, over-the-year percent change, United States and the Virginia Beach metropolitan area, June 2019**

Source: U.S. Bureau of Labor Statistics.

In the Virginia Beach area, two supersectors lost more than 1,000 jobs from June 2018 to June 2019: trade, transportation, and utilities (-3,600) and government (-2,100). While the local rate of job loss for the trade, transportation, and utilities industry was 2.7 percent, employment for the U.S. grew 0.7 percent. Locally, employment in government declined by 1.3 percent since June 2018, while nationally it increased 0.6 percent over the year.

**Metropolitan area employment data for July 2019 are scheduled to be released on Friday, August 16, 2019, at 10:00 a.m. (EDT).**

## Technical Note

This release presents nonfarm payroll employment estimates from the Current Employment Statistics (CES) program. The CES survey is a Federal-State cooperative endeavor between State employment security agencies and the Bureau of Labor Statistics.

**Definitions.** Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period which includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2017 version of the North American Industry Classification System.

**Method of estimation.** CES State and Area employment data are produced using several estimation procedures. Where possible these data are produced using a "weighted link relative" estimation technique in which a ratio of current-month weighted employment to that of the previous-month weighted employment is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are then obtained by multiplying these ratios by the previous month's employment estimates. The weighted link relative technique is utilized for data series where the sample size meets certain statistical criteria.

**Annual revisions.** Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports which are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

**Reliability of the estimates.** The estimates presented in this release are based on sample survey and administrative data and thus are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data are also subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the special estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding.

**Employment estimates.** Measures of sampling error for the total private employment series are available for metropolitan areas and metropolitan divisions at [www.bls.gov/sae/790stderr.htm](http://www.bls.gov/sae/790stderr.htm). Measures of sampling error for more detailed series at the area and division level are available upon request. Measures of sampling error for states down to the supersector level are available on the BLS website at [www.bls.gov/sae/790stderr.htm](http://www.bls.gov/sae/790stderr.htm). Measures of nonsampling error are not available for the areas contained in this release. Information on recent benchmark revisions is available online at [www.bls.gov/web/laus/benchmark.pdf](http://www.bls.gov/web/laus/benchmark.pdf).

**Area definitions.** The substate area data published in this release reflect the delineations issued by the U.S. Office of Management and Budget, dated April 10, 20018. A detailed list of the geographic definitions is available at [www.bls.gov/lau/lausmsa.htm](http://www.bls.gov/lau/lausmsa.htm).

The **Virginia Beach-Norfolk-Newport News, VA-NC Metropolitan Statistical Area** includes Gloucester, Isle of Wight, James City, Mathews, Surry, and York Counties and Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg cities in Virginia and Currituck County in North Carolina.
